The Builder

THE J. PAUL GETTY MUSEUM LIBRARY

The Builder.

AN

ILLUSTRATED WEEKLY MAGAZINE,

FOR THE

Architect, Engineer, Archæologist, Constructor, & Artist,

CONDUCTED BY

GEORGE GODWIN, F.R.S.

Fellow of the Royal Institute of Architects, and Honorary Member of several Societies.

"Every man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kinde of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned."

"Architecture can want no commendation, where there are noble men, or noble mindes."—— Sir Henry Wotton.

"Our English word To Build is the Anglo-Saxon Ẏlban, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."—— Diversions of Purley.

"Art shows us man as he can by no other means be made known. Art gives us 'nobler loves and nobler cares,'—furnishing objects by the contemplation of which we are taught and exalted,—and so are ultimately led to seek beauty in its highest form, which is Goodness."

VOLUME FOR 1856.

LONDON:

PUBLISHING OFFICE, YORK STREET, COVENT GARDEN.

GETTY CENTER LIBRARY

INDEX TO VOLUME XIV.

ABBEY Kitchen at Fontevrault, 60, 73
Abbey, Westminster, see "Westminster Abbey"

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c, the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 3l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

COMPETITIONS.

THE LUTON LOCAL BOARD of HEALTH, in the County of BEDS, are desirous of receiving PLANS, PARTICULARS, and ESTIMATES, for INTERCEPTING from the Town LEA, and for DEODORIZING, FILTERING, or otherwise DISPOSING OF the SEWERAGE of the TOWNSHIP, and hereby offer a premium of 30l. for the most approved set of plans, &c., for such purpose, and a further sum of 10l. for the second best, all plans to be delivered, free of expense, addressed to the Chairman, on or before FRIDAY, the 1st day of FEBRUARY next, with a motto accompanied by a sealed envelope, containing the name and address of the author. All plans not approved will be returned. Printed particulars and information, with a plan, showing the course of the river and adjoining land, may be had on application to the Surveyor, but each party will have to take their own section, as the Board leave the site for the works to the judgment of the competitors.

By order,
T. L. EVANS, Surveyor.

Luton, December 26th, 1855.

COMPETITIONS.

COMPAGNIE GENERALE DES OMNIBUS DE LONDRES.—The London General Omnibus Company). 100l premium.—The management being desirous of introducing an improved system of omnibuses through London, hereby offer a PREMIUM of 100l. for the best DESIGN and SPECIFICATION for an OMNIBUS, that with the same weight as at present, will afford increased space, accommodation, and comfort to the public. Each design and specification to be delivered at the Company's Offices, not later than SATURDAY, the 2nd of FEBRUARY next.

MACNAMARA, F. CARTERET, WILLING, and CO.
47, Old Broad-street. January 1, 1856.

TO ARCHITECTS AND OTHERS.

ST. CUTHBERT'S CHURCH, WELLS, SOMERSET.—A fund having been raised towards REPEWING the CHURCH, the Committee are desirous of receiving DESIGNS, PLANS, and ESTIMATES.—A premium of 20l. will be given to the author of the selected design, plans, and estimates, and 10l. to the author of those which the Committee shall deem second best. The selected design, plans, and estimate to be the property of the Committee, who shall not be bound to employ the person furnishing the same; if he should be employed, the premium will be deducted from his commission. A preference will be given to such plans, &c. as shall combine correctness of architecture with the smallest outlay and greatest increase of accommodation. The church can be viewed, and any further detailed information on the subject may be obtained, on application to Mr. WILLMOTT, Churchwarden, Market-place, Wells, to whom plans, &c. are to be sent on or before the 21st FEBRUARY next.

The plans, &c. to be sent under a private mark, with a sealed letter to correspond.

Dated Wells, January 1, 1856

RUGBY TOWN-HALL COMPANY.—EXTENSION of TIME.—Notice is hereby given, that the time for sending in the Designs and estimates for the Town-hall and Public Buildings at Rugby, has been extended to the 29th day of FEBRUARY next.

Rugby, January 1, 1856. RICHARD OVER, Secretary.

for specific sums, will be received by the War Department, Pall-mall, London, on or before 12th JANUARY, 1856, at noon. Detailed specifications of services Nos. 1 and 2, may be seen at Oliver's Hotel, Bodmin, on the 27th instant; and Nos. 3 and 4, at Crouch's Hotel, Hayle, on the 29th, between the hours of TEN and FOUR at each place. An officer will attend on the day preceding each of the above dates, to deliver specifications to such persons as may appear to be competent, and to leave the whole of the two days specified for inquiry and explanation.

Royal Engineer Office, Devonport, 14th December, 1855.

TO BUILDERS.

SEALED TENDERS for BUILDING BARRACKS, at Bull Point, near Devonport, for a SPECIFIC SUM, will be received by the Director-General of Contracts, War Department, Pall-Mall, London, on or before the 25th JANUARY, 1856, at Noon. Detailed drawings and specifications of the above, with every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 10th to the 24th JANUARY, 1856, both days inclusive.

Royal Engineer Office, Devonport, 27th Dec. 1855.

ORDNANCE CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.—TENDERS, sealed and addressed to the Director-General of Contracts, War Department, Pall-mall, London, will be received on or before TUESDAY, 29th instant, from parties willing to CONTRACT for REBUILDING FIVE WOODEN HUTS for OFFICERS' QUARTERS, on the South Camp, Aldershot. Plans of the same may be seen, and specifications and forms of Tender obtained, on application at the Royal Engineer's Office Aldershot, on and after MONDAY, the 7th inst. The Tenders to be marked "Barracks," and endorsed, "Tender for Rebuilding Five Huts at Aldershot."

Royal Engineer's Office, War Department, Aldershot, January 2, 1856

TO BUILDERS. — The ERECTION of a NEW UNION WORKHOUSE. — Persons desirous of CONTRACTING with the Guardians of the Poor, of the West Bromwich Union, in the counties of Stafford and Worcester, for the ERECTION of a NEW UNION WORKHOUSE, capable of affording accommodation for 600 inmates, together with the several buildings and offices, proposed to be connected therewith, at Lyndon, in the parish of West Bromwich, may inspect the drawings and specifications thereof, at the Offices of Messrs. BRIGGS and EVERAL, Architects, No. 320, Bradford-street, Birmingham, on and after the 24th day of DECEMBER inst. until the 31st day of JANUARY next, where full particulars connected therewith may be obtained. Sealed Tenders, endorsed "Tender for Workhouse Building Contract," must be sent in, and addressed to me through the post-office, on or before the 1st day of FEBRUARY next. The contractor or contractors will be required to give such security as the Board may require for the due performance of the works agreeably to the plans, and the general conditions and specifications, such security to be prepared at his or their expense. The Guardians will not pledge themselves to accept any or the lowest Tender.

By order of the Board,
CHARLES STRINGER, Clerk.
West Bromwich, December 10, 1855.

TO SCAVENGERS, DUSTMEN, &c.—The Crown Estate Paving Commissioners hereby give Notice, that they will be ready to receive TENDERS from persons willing to enter into a CONTRACT for the REMOVAL of DUST, DIRT, ASHES, CINDERS, &c. from the several houses, &c. within the district under their jurisdiction for a period of one year, from the 16th day of JANUARY next. Specifications and forms of Tender can be obtained upon application to me here, where the Tenders, sealed and addressed to the Commissioners, are to be delivered at TWO o'clock precisely, on WEDNESDAY, the 9th day of JANUARY, 1856.

FRANCIS ADAMS, Clerk to the Commissioners.
1, Whitehall-place, Dec. 22, 1855.

TYNEMOUTH BURIAL-GROUND.—To BUILDERS and CONTRACTORS.—The Burial Board for the Parish of Tynemouth are prepared to receive TENDERS for the following WORKS connected with the New Burial-ground at Preston viz.—

CONTRACT No. 5.—Two Chapels.

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

JOHN PARKIN and CO. late BLAKE and PARKIN, NEW MEADOW STEEL WORKS, SHEFFIELD, MANUFACTURERS OF CIRCULAR and MILL SAWS IMPROVED CAST STEEL FILES, for the use of engineers and mechanics, PUNCH and SHEAR KNIVES and CUTTERS, manufactured for planing and [illegible] &c. and every description of [illegible] will [illegible] and [illegible] to work with a harder and finer edge [illegible] Hooper

INVENTORS of CORE-ANNEALED CAST-STEEL for taps, piston-rods, &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST-STEEL, &c.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

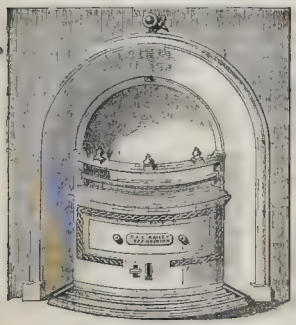
53, 54, 55, & 57, WYCH-STREET, STRAND, LONDON.

First-class Prize Medal Paris Exhibition, 1855.

Specimens from Paris Exhibition to be seen at the Architectural Exhibition, Pall-mall. Illustrated Price Catalogue to be had on application.

SKAIFE'S GALVANIZING WORKS,

COMMERCIAL-ROAD, LIMEHOUSE, LONDON.



Skaife's process is the most effectual preventive against rust, and is extensively used, for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.—Sheets plain and corrugated.—Roofs fixed complete.

J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized, Tinned Iron, Plumbic Zinc, and Tiles.

AN ALLOWANCE TO THE TRADE.

DR. ARNOTT'S SMOKELESS GRATES,

For the manufacture of which D. and E. BAILEY obtained the SILVER MEDAL at the PARIS EXHIBITION. The above excellent invention has been carefully modelled and manufactured by D. and E. BAILEY, 272, Holborn, who having experienced great difficulty in keeping pace with the increased demand for the above Stoves, have now made such arrangements as will enable them to supply their customers with the Smokeless Grates, of ordinary dimensions, from their stock on hand, which consists of various designs in black, bright, and polished steel, richly decorated with ormolu ornaments.

The great advantages of these Stoves over all others are—

1st. The entire absence of smoke.
2nd. An immense saving in fuel.
3rd. A cheerful fire, with simple means for regulating the heat.
4th. Will burn night and day, requiring only to be supplied with fuel twice in twenty-four hours.

For invalids' bed-rooms, these stoves will be found invaluable.

Prices and Prospectuses may be obtained on application, where the Smokeless Grates may be seen in daily use.

D. & E. BAILEY, IRONMONGERS,

272, HOLBORN, LONDON.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The Original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and I care up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

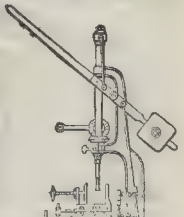
C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.



Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

NEW PATENT MACHINE for

MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongers' Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and, as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING

MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and constructors in the world with their Machines for home and foreign use.

A PRIZE MEDAL for SUPERIOR LOCKS

was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURGH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

CHUBB'S LOCKS, with all the recent

improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application

CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Hornsey-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 13, York-buildings, Adelphi.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED

TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 65, High Holborn.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

LIGHTNING CONDUCTORS.—

R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the points and all staples complete for fixing, at 5d., shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world

OFFICES.—Gateshead-on-Tyne.
109, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

NAILS and IRONMONGERY,

from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES

a complete LIST of which
will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

COLLINGE'S PATENT HINGES.—

Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

P. O'CONNOR'S PATENT LEVER

HINGE.—The most perfect and simple INVENTION for CLOSING SWING DOORS and GATES yet produced. The motive power being a weighted lever, it may be easily adapted to any size door, and is not liable to get out of repair as spring hinges generally are. May be had from all Ironmongers and Factors; J. CARTLAND and SON, Manufacturers, Birmingham; or from the Patentee, P. O'CONNOR, Ironmonger, Waverton, Liverpool.

FENDERS, STOVES, and FIRE-IRONS.

Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 8l. 10s.; ditto, with ormolu ornaments and two sets of bars, 1l. 10s. to 12l. 12s.; bronzed fenders, complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 16s. to 7l. 7s.; fire-irons, from 1s. 6d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth-plates. All which he is enabled to sell at these very reduced charges.

Firstly.—From the frequency and extent of his purchases; and

Secondly.—From those purchases being made exclusively for cash.

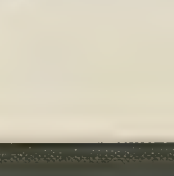
GAS CHANDELIERS and BRACKETS.

The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers, in Metal and Glass, all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are displayed in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the largest and most remarkable in the kingdom, viz. from 18s. 6d. (two-light) to 16l. 16s.

THE BEST SHOW of IRON BEDSTEADS

in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads, from 16s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d.; and Cots, from 20s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.

The alterations and additions to these very extensive premises (already by far the largest in Europe), which have occupied the whole year, are now nearly completed; they are of such a character that the entire of EIGHT HOUSES is now devoted to the display of the most magnificent Stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated and Japanned Wares, Iron and Brass Bedsteads and Bedding), arranged in Sixteen Large Show-rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.



Catalogues, with engravings, sent (per post) free.
39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established A.D. 1820.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN

and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and G-G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings; Iron-work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS

tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives superior tone and facility for ringing.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC.

GREAT REDUCTION IN PRICE.

PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about 16 oz. per foot super.

12	"	20	"
13	"	23	"
14	"	26	"

Full particulars and the reduced price sent by post on application to

A. MOREWOOD and CO. DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

SAMUEL HEMMING'S PATENT much

approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting lodges, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

PATENT GALVANIZING and CORRUGATING IRONWORKS (Improved Process).

WORKS—GLASS-HOUSE YARD, opposite the Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.

A Discount allowed to the Trade.

CASTINGS

ROYAL POLYTECHNIC GAS FIRE.

BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 149, Regent-street, London.

BUILDINGS HEATED by HOT WATER.

G. B. COOPER, IRONWORKS, 121, DRURY-LANE.
Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c.
Ornamental and Constructive Ironwork.

ECONOMIC COOKING-STOVE.—

DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London Bridge. Established A.D. 1700.

DR. ARNOTT'S SMOKE-CONSUMING

FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected on the cost of fuel.—Prospectuses, with testimonials, sent on application.

HEATING by HOT WATER.—J. JONES,

Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and supply cisterns, cast-iron doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, troughs, pipes, drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road,

Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be efficiently warmed by Hot Water. TO STONEMASONS, BUILDERS, RAILROAD CONTRACTORS, AND OTHERS.

RICH. RICHARDS and SON, 95, New

Park-street, Southwark, London, Manufacturers of TRAVELLING CRANES and JENNIES, to span from 5 to 70 feet, on the latest and best principle, warranted to lift from 5 to 30 tons, or upwards. Crab & Cranes, double and single purchase; stone saws, hammered and of the best quality, suitable for Portland stone or marble, made to any length; also saws for Caen and Bath stone. Blocks of all sizes, in sets of one, two, and three sheaves, or singly. Chain, suitable for the blocks, for hoisting any weight, made of the best iron, and tested by patent machinery. Lifting or screw-jacks of all kinds, double and single purchase traversing cranes for railways, and cranes and hoisting-tackle of every description to order or by estimate.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE SEVRES GLASS COMPANY.

LEGENDRE, TURPIN, AND CLARK'S

Establishment for the supply of Crystal White Sheet Glass, First, Second, and Third Quality; Window Glass, Shades, Potiche, Lamp Glasses, Bottles, and other Articles in White Glass, at

131, UPPER THAMES-STREET.—WORKS: SEVRES, NEAR PARIS.

ARCHITECTURAL AND ORNAMENTAL DECORATIONS.

Architects and the Trade are respectfully invited to inspect specimens of the

PATENT VITREOUS MARBLES AND CONSOLIDATED GLASS,

Applicable for Piers, Pilasters, Chimney-pieces, Shop Facias, Table-tops, Panels, &c. &c.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament. A Liberal Discount allowed to the Trade.

PATENT and BRITISH PLATE GLASS.—JAMES HETLEY and CO. beg to inform Architects, Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured.—Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 33, Soho-square, London.

THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster.
The Second Edition of this Company's Circular, just published, is now being forwarded, post free, to Directors, Engineers, Managers, and others interested in Railways.
The Circular contains Engravings, detailed Estimates of cost of construction, and descriptions of many valuable Patents, with the latest results of experience in the working of the various patented systems of Permanent Way, either the property of, or worked by the Permanent Way Company.
These patented systems are now adopted by Companies owning several thousand miles of Railway, are approved of by most of the eminent Railway Engineers, in this country and abroad, and the system of Fish-jointing, in particular, has received the unqualified approval of H. M. Commissioners of the Board of Trade and their Inspecting Officers.
The Permanent Way Company are prepared to grant licenses on liberal terms, to Railway Companies and Manufacturers for the use of all or any of the Patented Inventions, which have for their object the safety and comfort of the travelling public, and economy in construction of the Road and Rolling Stock.
That the objects are accomplished, the following extracts will confirm:—
"There can be no doubt that the practice of Fishing the Rails, which is becoming very general, is a great element of safety; the principle cannot be too much encouraged."—Extract from Report of Colonel Wynne, R.E. Chief Inspector of Railways to H. M.'s Commissioners of the Board of Trade, dated April 27th, 1854.
"My Lords direct me to observe, that they trust that the remarks of the Inspecting Officer, as to the desirability of the Fished Joint being adopted to a greater extent upon the Railway, will receive the attentive consideration of the Directors."—Extract from letter of Captain Galton, R.E., Secretary to the Railway Department of the Board of Trade, in reference to the foregoing Report.
"Dear Sir,—In reply to your favour of the 1st instant, I beg to say that I experience no difficulty whatever in keeping the nuts of the bolts tight."—Extract from a letter by Mr. H. Woodhouse, Engineer, of the London and North-Western Railway.
"I would, however, beg to state that, in point of safety, the first and most essential element of railway working, the Fish Joint, on your system, is, in my opinion *indispensable*—Extract from letter of Mr. J. E. M'Connell, Locomotive Engineer of the London and North-Western Railway.
"On a district of about thirty miles, where the greatest length has been Fished, the saving in labour of maintenance amounts fully to thirty per cent."—Extract from Mr. R. Jacomb Hood, Engineer to the London, Brighton, and South-Coast Railway.
Among others, the Company call attention to the following Patents recently placed under its management:—Mr. William Pole's important Improvement in Fish Joints, and Mr. Paul Prince's Improvements in moulding Railway Chairs.
Licenses, and every information, may be obtained upon application to CHARLES MAY, F.R.S. Managing Director of the Company, 26, Great George-street, Westminster; or to WILLIAM HOWDEN, Secretary.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO.—Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water pipes. Vulcanized Rubber Bed-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—"FROM SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE of WIGHT.—Second Testimonial.—March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least appearance of decay since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

6. THE HOUSE DECORATOR and PAINTERS' GUIDE containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By E. W. and A. ASHWORTH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including Directions of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HOGGINS, Esq. Accompanied by actual experiments (Hand-book Graining and Marbling Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LARDNER, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1885, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the serious attention of the Editor, for, as the value of each was tested by experiment, a description was accordingly prepared. By the introduction of new articles, and care in the revision of old ones, this edition has been thoroughly systematically enriched; so that it may be received as fully and faithfully expressing the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two Large 8vo. volumes, cloth, lettered, price 30s.

ARCHITECTURAL PUBLICATION SOCIETY.

For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, as Mechanics, Drawing, Colouring, Shading and Tinting, Ornamental and Water-colour Drawing, Perspective, Isometrical and Geometrical Drawing, Making, Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards. T squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

THE PHOTOGRAPHIC SOCIETY'S THIRD ANNUAL EXHIBITION will OPEN to the public on MONDAY next, JANUARY 7th, at the Gallery of the Society of Painters in Water Colours, 5, Pall-mall East. Open at Ten. Admission One Shilling.

DRAWING CLASSES, 24, Guildford-street, Russell-square—terms, 1 guinea per quarter—which commences on Monday, January 7. Gentlemen who cannot attend at the establishment may be attended at their residence on moderate terms, in any part of town or country, by Mr. SMITH or Mr. LEWIS.

MECHANICAL and ENGINEERING DRAWING-CLASSES, conducted by Mr. FREDERICK WOODALL, at 26, Wardo-street, Oxford-street, and 3, Clarence-road Kentish-town. Evening instruction in model, mechanical, and engineering drawing, given in a course of class lectures on rectangular projection. Fee for the term, one guinea; commencing first Monday in January, terminating third Monday in March. Prospectuses to be obtained at either address.

DRAWING CLASSES.—The Architects, Builders, Civil Engineers, and Mechanists' Drawing Classes, conducted by THOMAS E. HILL, Architect, Offices, 15, Old-street, City-road. Subjects taught—Architectural, Mechanical, Ornamental, and Perspective Drawing; Taking out Quantities, Abstracting and Valuing the same, Plans for Finished Drawings in Water Colour, &c. &c. Detail prospectuses to be had at the Offices.

PELICAN LIFE INSURANCE COMPANY, established in 1797.

70, Lombard-street, City, and 57, Charing cross, Westminster.

DIRECTORS.

Robert Gurney Barclay, esq. — Sirkman D. Hodgson, esq.
William Cotton, esq. F.R.S. — Thomas Hodgson, esq.
John Davis, esq. — Henry Lancelot Holland, esq.
William Walter Fuller, esq. — J. Hampden Turner, esq. F.R.S.
Jse A. Gordon, M.D. F.R.S. — Matthew Whitting, esq.
Peter Grace, esq. — M. Wyvill, jun. esq. M.P.

The Company offers—

Complete Security—

Moderate Rates of Premium with Participation in Profits—

Low Rates without Profits.

BONUS.—Four-fifths or Eighty per Cent. of the Profits are divided among the Policy-holders.

LOANS in connection with Life Assurance on approved security.

ANNUAL PREMIUM required for the Assurance of 100l. for the whole term of life:—

Age.	Without Profits	With Profits	Age	Without Profits	With Profits.
15	£1 11 0	£1 15 0	50	£2 18 10	£3 8 5
20	1 13 10	1 19 4	55	3 5 9	4 10 7
30	2 4 0	2 10 4	60	3 17 6	5 7 4

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.

ROBERT TUCKER, Secretary.

NORWICH UNION FIRE INSURANCE SOCIETY. (Established 1797.) Total Amount Insured £3,000,000.

Insurances may be effected with this Company upon more favourable terms than with other Offices.

For prospectuses apply at the Society's Offices, Surrey street, Norwich; and 6, Crescent, New Bridge-street, Blackfriars, London.

THE ASYLUM LIFE ASSURANCE OFFICE, 79, CORNHILL, LONDON.

Established 1824.

Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval employments.

The only Office on purely proprietary principles, no partnership among policy-holders is involved.

For prospectuses, proposal papers, &c. apply to

WILLIAM HOGGINS, Resident Director.

SPECIAL NOTICE.

The Books of the Society close on 1st of March, and Proposals lodged at the Head Office, or at any of the Agencies, on or before that day, will be entitled to participate in the Division of Profits at entry, and of One Year's Additional Bonus over later Proposals.

MUTUAL LIFE ASSURANCE.

The Whole Profits divided among the Assured.

THE SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY. Instituted 1831. Incorporated by Special Act of Parliament.

The Fund accumulated from the contributions of members, exceeds NINE HUNDRED THOUSAND POUNDS.

The annual revenue exceeds ONE HUNDRED and SIXTY-THREE THOUSAND POUNDS.

The amount of existing assurances exceeds FOUR MILLIONS and a QUARTER STERLING.

The amount paid to the representatives of deceased members is upwards of SIX HUNDRED and FIFTY THOUSAND POUNDS, of which SEVENTY-EIGHT THOUSAND POUNDS are Bonuses.

The NEXT DIVISION of PROFITS TAKES PLACE at the 1st of MARCH, 1856, and policies effected before that date receive one year's additional bonus over those effected after that date.

ROBERT CHRISTIE, Manager.

WILLIAM FINLAY, Secretary.

Head Office—26, St. Andrew-square, Edinburgh. London Office—126, Bishopsgate-street, corner of Cornhill.

WILLIAM COOK, Agent.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,

14, Waterloo-place, London, and 3, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.

RICHARD HAIRSTINE KENNEDY, Esq. Alderman, Deputy-Chairman.

This Society is established on the tried and approved principle of Mutual Assurance, for the sole benefit of the Policy-holders.

The funds are accumulated for the exclusive benefit of the Policy-holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of future premiums. Policy-holders participate in profits after payment of five annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1855, when a Report of the Business for the last year was presented, exhibiting a statement of most satisfactory progress. It appears that during the two last years, 1854 and 1854, between 800 and 900 new Assurances had been effected, producing an increase of premium income amounting to 14, 8d per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the last year in consequence of the visitation of the cholera, it had not been found necessary to reduce, in the slightest, the allowance of 2½ per cent. previously awarded to the Policy-holders.

Credit is allowed for half the Annual Premiums for the first five years.

A. R. IRVINE, Managing Director.

14, Waterloo-place, London.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

The Builder

VOLUME FOR 1856.

IN our last volume, we were led to make some strong observations on the indiscriminate praise which was being lavished on everything French in disparagement of everything English. We are amongst the warmest admirers of the glories of the French capital, and the cleverness in many respects of our brave allies: and we are by no means blind to the defects of honest, stolid John Bull, and the want of improvement in many of his roads. "Still justice is justice; and we feel assured that our protest was needed, and, moreover, that it may be usefully repeated.

When we find one of the most popular and admirable of our weekly periodicals setting forth, after eloquent descriptions of the new Rue de Rivoli, the Hôtel du Louvre, and other improvements in its neighbourhood, such nonsense as the following, we need not be surprised at anything in less intelligent organs: —"The architectural and structural achievements of Paris are on a much larger scale than those of our Houses of Parliament, for instance [all Paris against one building!], yet have taken not a *hundredth*—perhaps (for we do not yet see the end of Westminster Palace looming in the distance) not a thousandth part of the time!" It is difficult to guess how the writer could explain his statement, seeing that the first stone of the Westminster Palace was not laid till April, 1840, and that the rapidity with which this enormous pile of buildings has been erected is marvellous. Apart from the question of time, our skilful and tasteful contemporaries on the other side of the water have erected no building which for extent, completeness, and importance, can be named as its parallel: nor, turning to another style of art, can they show any building to compete with St. George's Hall, Liverpool. As respects the time occupied in architectural operations, Paris has wisely never sought to make her public edifices instances of rapid building: all her most important structures have been the growth of years. The extension of the Rue de Rivoli, and the connection of the Louvre and the Tuileries,—commenced under extraordinary circumstances, when it was found desirable, apart from other motives, to provide work for the artizans, to clear away a very revolutionary part of the city, and to facilitate the passage through it, especially about the Hôtel de Ville,—are exceptions; and here, it is unquestionable, an enormous amount of work has been done in a very short time.

Never let it be supposed that we underrate the devotion of the French to the Beautiful, the means they give the rising generation to become artistical, and the opportunities they afford men of talent to cultivate and exhibit their powers. The Louvre is a wonderful storehouse of art, ranging as an architectural production from Francis I. to Napoleon III. and enshrining the sculpture of the antique time and the painting of the modern world. Pierre Lescot, with Jean Goujon for sculptor, Bernini, the Perraults, Percier, Fontaine, and Visconti are the architects who have worked here.

The ceilings display the works of many of the nation's best painters; while, for the exterior, as well as the interior, the sculptor's aid has been liberally employed. The new works include a whole population of statues, in the production of which a number of sculptors are engaged. Every statue made is submitted before erection to an Examining Committee, whose decision is final. It appears that this step was resorted to in consequence of the carelessness of some of the artists, who, in haste to complete the execution of the commission entrusted to them, had not shown sufficient regard for their own reputation. When we were last in Paris, we heard of the rejection of no fewer than three statues and four groups, showing the care exercised by the committee.

The opportunities afforded to English sculptors are sadly few as compared with those given in France. Throughout the Louvre, let us add, too, honour is paid to art and artists in a wise and grateful spirit, even to the dedication to them of the noblest of the halls.

In one of the rooms are deposited, in a glass case, the implements used in laying the first stone for the completion of the Louvre, on the 25th of July, 1852,—such as the square, the level, and the mallet.

Some of the memorials, by the way, deposited in the *Salles des Empereurs*, less known than the contents of other parts of this wondrous storehouse, are particularly interesting,—the metal throne of Dagobert; the crown of Hundde, attributed to the eighth century; the sword of Charlemagne, spoilt by the embroidery with which it was ornamented for the coronation of Charles X.; some very early MSS. and books, and one apartment fitted with relics of all sorts, of Napoleon Bonaparte,—portions of his dress worn at particular events when on the throne and in exile. They serve touchingly to illustrate the life of this extraordinary man. However, our object is not to write a "Guide." Great pains are taken with the grounds around the Louvre: the paths are bordered with a thick edging of *trained ivy*, —not often so employed in England. The large use made of trees in Paris materially improves the effect of their buildings. A paper recently published in Paris gives the number of trees planted there, from which we learn that there are on the exterior boulevards, 11,441; interior boulevards, 91,137; quays, 4,706; avenues, 6,872; places, 3,659; streets, 1,864; Champs Elysées and Promenoir de Chaillot, 9,555; Esplanades des Invalides, 2,040; slaughter-houses, 1,510; Grenier de Réserve, 120; Entre, pots des Boissons and Marché aux Chevaux, 874; cemeteries, 3,826; and communal schools, 1,130. The length of ground occupied by these trees is 78,515 metres (19¾ French leagues). In addition, there are 57,134 trees, of from one to upwards of 100 years of age, in the different public gardens!

The new portion of the Louvre in the Rue de Rivoli, which fronts the Palais Royal, and has been erected from the designs of Visconti, presents an immense amount of carving, rich, but not always satisfactory in design. The existing building, however, provided the key note. Caryatides support a pediment on the third story of the centre: the attic above this is most elaborately sculptured, and terminates with heads and scrolls along the top of the cornice. In our volume for 1854 (Vol. XII. p. 131), a bird's-eye view of the two buildings as proposed to be united, will be found; and in an earlier volume a plan (Vol. X. p. 443). With the former, is given a long historical account of the Louvre and the Tuileries, and of the numerous designs for uniting them, running over a long period of time, which were made by all the leading architects of France,—who certainly seem to have exercised themselves by imagining difficulties where they did not exist. In our present number, p. 7, we give a view of the Renaissance Court of the Louvre, built during the reign of Louis XIV. with its wonderful amount of sculpture, and showing the equestrian statue of François I. which is now about to be erected. We hope this engraving will be taken as an evidence that there will be no falling off in this department of the journal: on the contrary, our efforts will be uniformly directed to its improvement, in this respect as in all others.

ON COLOUR AND ITS USE IN ARCHITECTURAL ART.*

"THERE is no better education for the eye than the study of fine prints — their colour is so fine." Such was the remark made to me by an intelligent collector of engravings some time ago. At the moment it struck me as a most appropriate exemplification of the value of the lower or neutral tones of colour, in all fine combinations. Now, if any one will give himself the trouble to examine with the most ordinary care an etching by Rembrandt, in its ordinary state, and in one of its later stages, when the plate has been weakened by the numerous impressions taken from it, he will find that the chief difference between a really valuable and a comparatively worthless engraving, consists mainly in the fact, that in one case all the various gradations between light and dark, sharp and dull, are given with precision and accuracy, whereas in the inferior and worn-out plate, they are characterized by a dull, heavy uniformity.

Observe that in each case the general arrangement must be the same. The disposition of light and shadow remains unchanged, but it is by those slight indications of character which perfect execution conveys, that we are enabled to judge of the true merit of a print. Even in a matter which is so purely black and white as a line engraving, colour is one of the first things which attract the eye of the artist.

What is the lesson we are to learn from this? I reply, the extreme delicacy of all matters relating to colour. In a former lecture I showed that the primitive colours red, yellow, and blue, were the first to attract the eye. It is, however, as I shall now try to show, upon the neutrals the nice discrimination and tender care with which these latter are distributed, that beauty of colour depends.

Allow me for a few moments on this subject, to call to your notice a work, having the form of a scientific treatise, lately published by a Frenchman, Mons. Chevreul (director, I believe, of the Royal Manufactory of Gobelins Tapestry, at Paris).

He observes:—

1. That a ray of solar light may be divided into seven groups of colour—red, yellow, orange, and green; blue, violet, and indigo. To which is added this most pertinent remark:—It must not be supposed that all the rays comprised in

* The following paper by Sir Walter C. James, bart. was read at the Architectural Museum, Canon-row.

the same group, red, for instance, are identical in colour: on the contrary, they are generally considered as differing among themselves, although we recognise the impression they severally produce as *red*.

One more short extract:—

1. When light is reflected by an opaque white body, if this body be not polished, each point of its surface must be considered as dispersing in every direction through the surrounding space the white light which falls upon it, so that the point becomes visible to an eye placed in the direction of one of these rays.

2. When the body is polished like the surface of a mirror, for instance, one portion of the light is reflected irregularly, as in the preceding case: at the same time another portion is regularly or specularly reflected, giving to the mirror the property of presenting to the eye, properly situated, the image of the body which sends its light to the reflector.

3. Let us observe this:—It is obvious that if we reunited the total quantity of the coloured light absorbed by a coloured body, to the total quantity of coloured light reflected by it, we should produce white light; for it is this relation that two differently coloured lights, taken in given proportions, have of reproducing white light, that we express, by the following terms, coloured lights, complementary to each other, or complementary colours. It is in this sense we say,—

That red is complementary to green, and *vice versâ*;

That orange is complementary to blue, and *vice versâ*;

That greenish yellow is complementary to violet, and *vice versâ*;

That indigo is complementary to orange yellow, and *vice versâ*.

It must not be supposed that a red or yellow body reflects only red or yellow rays besides white light. They each reflect all kinds of coloured rays; only, those rays which lead us to judge the bodies to be red or yellow, being more numerous than the other rays reflected, produce a greater effect. Nevertheless, those other rays have a certain influence in modifying the action of the red and yellow rays upon the organ of sight. (In proportion to their number do we speak of a colour being dull or brilliant.) This, too, will explain the different varieties of hue which may be remarked among red and yellow substances. It is also difficult not to acknowledge that among the differently coloured rays reflected by bodies there is a certain number of them which, being complementary to each other, go to reform white light on reaching the eye.

Hence I apprehend it is that one painting is said to be more luminous than another, viz. because the complementaries are nicely balanced. Thus a larger number of colourless rays are brought to bear on the retina. Thus it is that a cloudy landscape may be thrown into sunshine by a few touches of gay and positive colour in the foreground; and the sombre tints of a Raffaelle or a Rembrandt be illuminated by the skill shown in painting a lace ruff, or the careful handling of the flesh tints upon the countenance.

Let me here risk a remark, though perhaps to some of my audience it may seem hardly within the fair limits of my subject. The value of a truth must ever be in proportion to the degree in which it imparts self-knowledge,—a knowledge of our own moral nature. Creation itself is but a glass or mirror to give us an insight into the attributes of the Creator.

In this respect, the truth I have alluded to respecting colour has some importance. The primitive colours, seldom seen in their purity, and always, when seen, in very minute quantities, may perhaps fairly be compared to those periods of life when we are called upon to perform some great exploit, or make any unusual effort; while the neutral tones, covering, as they do in nature, and as they ought to do in art, the larger spaces, are like the monotony of our every-day life, not brilliant, but useful, well worthy of attention and study, as being the background upon which the fair picture depends,—the foundation on which the superstructure stands.

Next to a careful outline in any work of art, we proceed to the laying in, as it is technically called in painting, or the disposition of the lights and shadows.

Light and shadow hardly belong to the province of colour—hardly to that of form. It stands really midway between both. In one sense it appears to partake of the nature of colour, for it unquestionably admits of those variations of warmth and coldness which impart at least one of its main attractions to the art of colouring. It appears, therefore, appropriate to remark, that whether the study of light and shadow belong to colour or to form, or be allowed, as is perhaps the most philosophical arrangement, to have a province of its own, it is well that it should form the study of all artists and art-workmen, and ought scarcely to be overlooked in any lecture which professes to give an account of neutral colour.

No round object can be faithfully represented without shadows. It is probably on this account that "light and shadow" form a more prominent object in the painter's course of study than in that of the architect or sculptor. While the student of painting is working from the "round," the architect is occupied, perhaps, with a section—the sculptor with his modelling instruments and clay. This is to be lamented. The sculptor and the architect ought, if possible, to be as accomplished draughtsmen as any painter. Sculpture and architecture, each in their own province, are as dependent upon a judicious distribution of light and shadow as painting is. Sculpture and architecture, indeed, admit of the application of colour.

It is seldom, however, in this country and climate, that either statues or buildings can admit of colour being applied to them specially if in the open air. Painting, of course, relies upon colour and bright colour. The former are in most cases reduced to light and shadow, and form, as their only means of attracting attention. Any one, indeed, who has had the good fortune to visit the Vatican by torch-light, will appreciate the importance of light and shadow in sculpture; and as to architecture, who is there that ever gazed upon the majestic outlines of an old cathedral, dark against the setting sun,—or, again, in its very different aspect, coming forth in the brilliancy of reflected light against a dark thunder cloud,—but will admit how variously it is possible to contemplate the same object, when seen in shadow or in light? It was a remark, I fancy, of the great painter Turner, that none could attain great eminence in his own art (landscape painting), who was not an early riser. Surely the early hours of the day are those which have upon the mind the most invigorating effect; but to the artist the hint is invaluable; for then is it that we can best study those grand forms, which, rising above the mist, display beauty of outline veiled in the tenderest colours:—

> "Hues of the rich unfolding morn,
> Which ere the glorious sun be born,
> By some soft touch invisible,
> Around his path are taught to swell."

At no time are the lights and shadows better worthy of our attention. Has any one ever studied at such times, either any lofty cathedral, or scarcely less beautiful temple of the Greeks? Nay, has any even observed his own parish church, or the gable of some ancient cottage? He will then, doubtless, have marked, how sharply and beautifully the sculptured niche, and deep-cut moulding, caught by some wandering ray of sunlight, display themselves; and how they are all the more brilliant on account of the dim veil of obscurity, in which the great features of the building may, haply, be shrouded. The prominent parts of such a building are like the loftiest peaks of some grand mountain form, tipped with golden light, and clear above the clouded base, giving, perhaps, a more stupendous notion of its whole than would have been afforded by the visible and actual.

Nature in such aspects and under such a point of view has an interest greater in kind, though very like that which we attach to an unfinished work of art. Here and there are striking beauties, but many parts of the scene lie hid in that mystery which, while it is full of uncertainty, is fuller still of hope.

And now let me ask is there any principle—or are there more than one—by which we may discover to what all this beauty is due? To put the question in a clearer shape: are the neutral tints of a beautiful scene in nature arranged upon any definite plan or according to any known law?

We venture to think that they are. 1st. It will be found in nature that the masses of light and shadow are unequal in their form, though even and equable in their general tone. 2nd. Although the lights and shadows are even in their tone, that evenness does not imply absolute monotony; far from it. Cold colours and warm are generally mixed up with each other, in the same way as a warm and luminous character is seen to prevail in the mists of the morning. The evenness of tone to which we allude is not attained by absolute oneness or unity in all its parts, but by the counter balance of various colours, and the very slight degree in which each little square inch, or (to speak more in the language of science) each molecule differs from its neighbour. 3rd. As I mentioned in my last lecture, the brightest bits of light, and the darkest of shadow, are always small; they are frequently brilliant in colour as well as highly luminous, and in close juxtaposition. They are thus more striking by force of contrast, and upon them the eye delights to dwell. On this account they are well worthy of any amount of trouble or skill which the artist may expend in their faithful representation.

Such are some of the laws of light and shadow laid down, imperfectly I fear; but I trust, as far as they go, intelligibly. Nothing is more common than to hear a certain jargon or phraseology adopted with regard to these few simple laws, without their being really understood. Breadth of light and shadow, breadth of colour, breadth of effect, are common and forcible expressions. I must doubt whether they are distinctly apprehended by all who use them. They appear to me often applied as if they meant a sort of slap-dash style,—a courageous dealing with matters of high art, quite inconsistent with so-called vulgar attention to matters of detail. This is a great, though common error. In all the arts it is quite possible to treat a subject in the broadest, nay, even in the boldest way, and yet give the most scrupulous attention to finish. Let me add, that boldness and finish, each in their proper sphere, so far from counteracting, have a tendency to draw forth and exhibit their mutual and relative dependence. The discoveries of the telescope, and a knowledge of astronomy, give almost a tenfold value to the truths, equally important and equally interesting, which the microscope unfolds.

Art, then, let us remember, is a unity, and a grand unity. It combines attention to details in every part with a perfect whole. It is really puerile to set up one part of it above another, in the way we often hear of,—to say colour is everything, light and shadow form everything, or to exalt painting above architecture, sculpture above painting, architecture, in its restricted sense, above both. Form, light and shadow, and colour; painting, sculpture, and architecture,—all these go to the formation of one grand idea,—the realisation by material aids of the impressions we derive from the external universe.

Hence the difficulty of speaking of one province of art,—that, for example, which I have chosen,—without diverging into others. Beauty of colour is dependent, as we have seen, not merely on the hues, but actually on the forms which the patches of colour assume, and above all, on the disposition of the neutral masses. How poor, comparatively speaking, would the rainbow be if it did not combine with its hues the magnificent form of the arch.

The most delicate complexion would not conceal or neutralise bad features, while on the other hand, it is readily admitted that good features are improved by a good complexion. The forms of the clouds on a summer evening increase their brilliancy. The same principle holds good in art. We admire the colouring of Titian, but we feel to want something more. When we look at the drawing of Michelangelo we feel we want something more. The light and shade of Rembrandt do not thoroughly satisfy us. Why is this? Because art being a unity, and aiming, therefore, at perfection,

wants more than man can give. He, then, who takes up art in earnest, would do well to remember that she is jealous, and demands the energies of the whole man. Art asks more than we have it in our power to give. Much we may give: all we cannot. Still, art has full right to ask for all. It is her office, like that of every great pursuit, whether science or literature, or any other, to show that our best efforts here are imperfect. The nature which surrounds us, though in most, if not quite in all, respects superior to any imitation that man can produce, partakes of an inherent imperfection. Her noblest works,—the longest lived among the animals; the oak-tree, which lives a thousand years; nay, the so-called everlasting hills, are transitory. Our aim, then, is to look through Nature and beyond her. The office of art, as of everything great or good here, is to remind us of immortality.*

THE POSITION OF THE ORGAN IN CHURCHES.

WE resume our notice of the work of Dr. Rimbault and Mr. Hopkins,† and will treat more especially upon that portion of it which relates to the position of the organ in churches. This part of the subject is of importance to the architect, involving, as it does, several considerations of consequence both acoustical and symmetrical in the designing of ecclesiastical edifices.

The exact period of the introduction of the organ into the service of the church is involved in obscurity, or rendered doubtful by the conflicting testimony of old writers, but it was probably about the third or fourth century of the Christian era. The earliest account of an organ supplied with wind by bellows, but not furnished with keys, is certainly that ascribed to the Emperor Julian, although, as we said before, the description might apply to the bagpipe, when clothed in the lofty imagery of poetry. But the period—the middle of the fourth century—would agree with that ascribed by some authors for the introduction of the real organ. An engraving, from Didron's "Annales Archéologiques," of a sculptured representation of a pneumatic organ on the obelisk at Constantinople, erected by Theodosius, who died A.D. 395, gives weight to the period ascribed. A century later, Cassiodorus, in his commentary on the 156th Psalm, speaks unmistakably of the state of the instrument, where he says, "Organum itaque est quasi turris quædam, diversis fistulis fabricata, quibus *flatu follium* vox copiosissima destinatur," &c.

The Greeks can lay no claim to the origin of the organ, beyond the merest *precognita*, or simplest improvements upon nature's first flute, the whistling reed, moved to music by the zephyrs:—

> "Et zephyris cava per calámorum sibila primum,
> Agresteis docuere cavas inflare cicutas"
> LUCRET. lib. 5.

Their instrumental music was but of two kinds, *αὐλησις και κιθάρισις*. The Romans derived their arts as much from the Etruscans as the Greeks, for every instrument found on Greek works of art is found also on Etruscan. The flute was their instrument most loved, and their flutists the musicians most honoured:—

> "Temporibus veterum tibicinis usus avorum
> Magnus, et in magno semper honore fuit,
> Cantabat fanis, cantabat tibia ludis,
> Cantabat mœstis tibia funeribus."—OVID.

Kircher, in his ponderous Latin work upon music, in the chapter, "De Instrumentis Hebræorum," shows two or three engravings of the Jewish organ in different stages of advancement, but without decided dates, copies of which are shown in the doctor's essay. But so much mystery envelopes the ancient Jewish musical instruments in general, that, in regard to the much-disputed psaltery, he says, "Psalterium Davidicum quale fuerit nemo recte adhuc definivit; credunt aliqui, non tam fuisse instrumentum quam certa quædam harmoniæ genera denotare, et vocis sonique modulationem," &c.

In 450, says Julianus, the organ was in common use in the Spanish churches. Other instruments were used still earlier, and we are told that their introduction by St. Ambrose, in the Duomo of Milan, set the fashion, and Justin Martyr, who flourished 150, relates the use of them even then.

In 313, Constantine built several sumptuous churches, and during his reign the Ambrosian Chant was established at Milan. The venerable Bede, who died 735, when minutely describing psalm-singing, singularly does not allude to the organ. According to Mabillon and Muratori, organs became common in Italy, Germany, and England during the tenth century. In the mediæval ages, the instrument was placed on one side of the choir, a position which seems to have been almost universal throughout Europe.

In our former notice of this work, when speaking of the term "pair of organs," we attributed a certain passage, explanatory of the instrument called the "positive," to Dr. Rimbault himself, whereas it should have been marked as a *quotation* only of the ordinary explanation of that term in the musical dictionaries. However, to what we then said we may add, that Nicholls, the historian of Leicestershire, says—"A 'pair of organs' was the term at that time, when there were two kinds of organs used, the one fixed and the other portable, &c." The "portative," then, was the early movable instrument known as the "regal," and the "positive" was the larger organ, known as the "small," or "choir;" afterwards, from its position, corrupted into "chair," which, being appended to the "great" organ in churches, was the probable origin of the term so much discussed.

In Canterbury Cathedral, as restored by Lanfranc, the organ, according to the monk Gervase, was placed above the arch in the south transept; and after the fire of 1174,—"when the whole choir," says Britton, "from the angel steeple to the east end, together with the Chapel of the Virgin, &c. were destroyed,—after the rebuilding of same, the organ was placed upon a large stone corbel, over the arch of St. Michael's Chapel, in same transept." The corbel is shown in the section of Britton, pl. 4, but has since been removed. In the time of Dr. Burney the organ stood on the north side of the choir, between the third and fourth pillars, and at present, as we know, it crowns the magnificent screen at the entrance of the choir.

In the old cathedral of St. Paul, the great organ stood under one of the north pier arches of the choir, above the stalls, with the choir organ in front. It was destroyed in the great fire. The organ of Westminster Abbey, upon which Purcell played, stood on north side of the choir, and was a small instrument, with diapered pipes: it was removed in 1830—the date of the present instrument,—but its destination is a matter of uncertainty.

At York, the organ built by Dallam in 1632, was, by command of Charles I., placed on the "north side of the choir," in order not to impede the view of the church; but in 1690, Archbishop Lamplugh reversed the decision, and removed it to the stone screen. The same monarch gratified his taste by removing the organ of Winchester Cathedral from the screen to the north side of the choir. "At Chester," says Burney, "the small primitive organ is still standing on left side of the choir, though that now used is at the west end." In Durham, the organ was on the north side of the choir; and a cut from Dugdale shows that of Lincoln in the same position, and illustrates at the same time the much discussed "pair of organs."

Our college chapels also followed the general practice of placing the organ at the side of the choir, whether north or south.

As regards parish churches, the common situation for the organ, both before and after the Reformation, was in the chancel: of course there were exceptions to this. In the Oxford "Glossary," we read:—"The large instruments now in use, were not put up in their present conspicuous situation, in the place of the ancient rood-loft, until after the Reformation. On the Continent, they were also introduced in the course of the seventeenth and eighteenth centuries, but were usually placed at the west end of the choir. In this country, prior to the Reformation, the organ was frequently placed on the north side of the choir, or in the north transept." Thus it will be seen, that in England the present usual position of the organ, over the choir screen, does not appear to have been *general* until the Restoration. On the Continent, the large organs are invariably placed in "lofts;" some at the west end, some over the doors, and some against a pier. A particular instance of the latter, is that magnificent one by Silbermann, at Strasburg, where the organist sits suspended in the air, some 40 or 50 feet from the pavement, occasioning, at first sight, rather an unpleasant feeling of insecurity. In using the term "large," we particularize the principal organ, as it is a rare thing to find a church of pretension on the Continent, without its two, three, four, and sometimes even six organs. For instance, the Duomo of Milan, that of Verona, and the Church of Saint John, at Bologna, have each two large organs, one on each side of the choir. Also the Cathedral of Florence, on the north-east and south-east of octagon.

San Antonio, at Padua, has four organs, and St. Mark, at Venice, six—two large and four portable. At Ratisbon, the organ is placed behind the high altar, an arrangement totally unworthy of this magnificent structure; and that of the Frauen Kirche, at Dresden, one of Silbermann's finest, is placed over the communion table. A list of other instances of importance concludes that portion of Dr. Rimbault's prefatory essay. As we before observed, Mr. Hopkins's work is eminently practical and valuable as a manual of organ construction. His chapters upon each leading feature of the fabric, the case, the bellows, the wind-chest, the claviers, the pedals, the pipes, the stops, &c. with all their complex and elaborate constructive subdivisions, are well and particularly described. The portion of the work of more particular interest to architects generally, is comprised in chapters 32 and 33, namely, the situation of the organ and its size.

Some preliminary observations upon acoustical data and theories, are not misplaced in introducing this *vexata questio*. Air suddenly displaced by the expansion or vibration of a body, displaces in its turn the air adjacent to it, which in like manner communicates its disturbance to the atmosphere around it, the effect varying in intensity according to the power of the prime cause, continuing with its duration, and ceasing with its cessation. The effect of continuous waves upon the surface of a smooth lake into which a stone is dropped, well illustrates the effect, with the exception that the disturbance of the lake is horizontal whilst that of air is spherical, or radiating from the disturbing cause in every direction. "Sound then," says the author, "travelling as it does in all directions, it is easy to discover the cause of the excellent musical effect produced by organs occupying a *central* position in a building; as, for instance, the choir screen of a cathedral or other large cruciform church." A staccato chord from a cathedral organ in a central position will be heard retiring to the remotest parts of the building, and ultimately dying away. A continuous sound, on the contrary, dies not away, because fresh sound-waves follow each other until the building is filled,—but when the hand is raised from the keys it recedes and dies away as before. Sound, being more reflexible than light, penetrates into recesses where light would fail to enter, but, like light, loses in intensity what it gains in extent. Thus, a sound that has travelled twice a certain distance will only be heard with a fourth its original strength, the loudness not diminishing inversely as the distance increases, but inversely to the square of that distance. This is the rule for the open air, but in a building the sound is retained, and the reflection causes echo, which, if the original sound still exist, mingles with it,—if it cease, is audible afterwards. The reciprocation of neighbouring bodies augments the sound and forms *resonance*: for instance, a vibrating tuning-fork will, on the handle being placed on the table, acquire an accession of strength; so with a violin, if only the strings vibrated, an insignificant sound would be produced, but, when the body of the instrument is set vibrating, sounds are produced of considerable power. Resonance is, therefore, an essential condition in musical instruments: thus, a wooden floor, and that a

* To be continued.

† The Organ: its History and Construction. London. Cooks and Co.

raised one, beneath an organ, greatly increases its effect and power, the whole of the surrounding woodwork being thrown into strong vibration.

"The most common impediments," says Mr. Hopkins, "to the equal dispersion of the tones of an organ occupying a west gallery, are the lateral galleries. These catch the sound as it spreads, and prevent its descending into and pervading the aisles beneath so effectually as it would otherwise do," therefore their exclusion in modern churches, together with that of high closed pews, &c. are favourable steps towards acoustical excellence. Instances, however, have occurred in which the echo and reverberation were so great as to require the application of artificial absorbents, &c. in the shape of drapery, to remedy the confusing effect

One more peculiarity of sound may be alluded to—its penetration. Whereas a wall, or other opaque body, will exclude light, it cannot prevent the spread of sound; and the swell of an organ is heard in a subdued form through the thick woodwork that encloses it, when the shutters are perfectly closed.

The most usual position assigned to the organ for the last 300 years has been the west end. In selecting the west end of a church for the situation of the organ, the architects and ecclesiastics doubtless were actuated by the same motives that induce the choice of a similar situation in a concert-room for the erection of the orchestra, namely, that the entire area of the chamber might have the benefit of the whole united body of sound thrown forward without impediment. By choosing the west end, opportunity was afforded of raising the organ on a platform or gallery, above the level of the congregation; thus increasing resonance, and imparting freedom to the tone, and diffusing it in a more even manner among the audience. Had the organ been placed too near the roof, its tone would have been smothered, and its mechanism injured, from the excessive heat of summer, and cold and damp of winter, occasioning some of that long list of technical ills that the organ is heir to. Greater space, too, was afforded at the west end for mechanism and pipe work. One other advantage might be cited; that being *behind* the congregation, the eye might not be induced by its attractions to wander from its proper object of concentration —the altar; at the same time that it might have filled a high position in the church generally, as an architectural embellishment.

One objection there was, however, to the use of the west end for the position of the organ, and that was the blocking out the great west window when it occurred. To obviate this very serious drawback, they hit upon the plan of either dividing the organ into two parts, one on each side the window, or of piercing with a window the organ itself. Dr. Burney, in his musical tour through France and Italy, cites several instances in those countries.

Smith and Harris, on settling in England, followed the continental custom of placing their organs at the west end of churches, not cruciform, whether with a window or not, but in no case built a divided organ. That at New College, Oxford, was probably the first made here; and that at the Church of the Immaculate Conception, Farm-street-mews, one of the most successful. The cathedral organs of Smith and Harris were usually placed upon the choir-screen, and were scarcely larger than those built for parish churches. The contest between Sir Christopher Wren and the Dean and Chapter of St. Paul's Cathedral we related in our former notice: the latter obtained their point, and the example has been uniformly followed in cathedral and other churches to within the last few years. In recent times the west end has been much objected to,—especially where there is a choir, on account of the distance between it and the voices; and in that case the next position in merit is certainly the *side* of the church.

In some instances, where sufficient space could not conveniently be had in the church, an organ-chamber has been built out from the side. An old example of such exists in the Chapel of Christ's College, Cambridge. Tone, in such a case, is much weakened, but a raised hollow flooring, and plenty of space between the top of the organ and the arch, will much obviate the defect, as at the Temple Church and elsewhere. A most unfavourable plan for tone is that of putting the instrument in a recess, the front of the organ being flush with the face of the arch, and completely filling up the opening. Tone, in such case, can only escape through the interstices of the pipes, like water through the fissures of a flood-gate. At St. Mark's, Old Street-road, this arrangement occurs, and the calculation of the organ-builder is, that a *fourth* only of the tone of the instrument finds its way into the body of the church. But a worse arrangement still is that of putting the *organist*, as well as the organ, into a chamber at the side, with the pipes forming a screen between him and his audience, the noise of the instrument being as oppressive in that small space as the bells in a belfry. The frequent custom of placing the organ at the east end of one of the aisles in an organ-chapel on one side of the chancel, is much preferable to the last-noticed arrangement. In such situation, the floor should be of wood, and hollow, and the sound-boards as high as possible.

If the organ be placed in a chancel-chapel, there should be an arch opening into the aisle as well as one towards the chancel. The object of this is to allow the tone of the organ to pass down the aisle as well as across the chancel.

Another, and more rare arrangement, is that of *dividing* the organ, and placing a portion of it on each side of the chancel, where there is room, as at St. Margaret's, Leicester (see Mr. Sparke's pamphlet on "Choirs and Organs," page 19, where this arrangement is illustrated with a wood-cut). "This plan," says Mr. Hopkins, "is in every respect a most excellent one, scarcely, if at all inferior, even in a musical point of view, to that of a divided west-end organ; while, under its working, the organ is accommodated without being sacrificed to other arrangements that are now considered essential in most churches." A list of the advantages obtained by this mode is appended.

As regards cathedral and minster organs.—At the time the alterations in Westminster Abbey were in contemplation, the Rev. Sir W. Cope proposed to erect the organ at the west end, and at the same time to strengthen its tone as much as possible. The choir screen was proposed to be placed at the west end, so to extend across between the first pair of pillars of the nave, with its face to the east, so as to disclose at one view the whole expanse of the minster; an arrangement, musically, as well as architecturally, considered. As subsequently carried out, the choir screen was retained in its former position; the organ was divided into four portions,—the great organ being placed within an arch on the north side of the church, the swell under the corresponding arch, on the south side: the 32 feet pedal pipes, were laid horizontally along the west side of the screen, while the choir organ hung over the east side, in the usual way. Though so much broken up, the tone of the organ tells well; which may partly arise from the two main portions not being too much under the side-arches, but partly projecting from under them. At Ely, the organ, reconstructed under the direction of the architect, is a *hanging one*: the keys are behind, on the aisle side, so that a portion of the instrument is between the organist and singers: the effect is nevertheless good, and the appearance very grand. Mr. Hopkins concludes this important chapter of his work by a recommendation for placing the player at the *side* of the instrument, an arrangement certainly presenting many advantages. The organist could then see his choir and be seen by them, and, if placed over the choir-screen, would see either end of the building by turning his head, and could thus receive communications and be independent of the prompting so requisite in the present system,—besides this great advantage, that the space of the organ loft could be taken into the Great organ-case by moving the front forwards to the back of the Choir organ,—thus admitting the introduction of many large pipes now wanting. The above arrangement is seen in Snetzler's organ, Beverley Minster; which instrument, standing on the choir-screen, has the keys on the north side.

In chapter 31, certain rules for the regulation of size and power of organs, so as to render them proportionate to the size of the church in which they are to be placed, and the congregation whose voices they are meant to sustain, are submitted for consideration. In this the acoustical properties of the building in question have to be considered, in order to calculate the number of stops requisite. This calculation, it is obvious, can be but approximate, owing to the various causes influencing the acoustical effects, and which can never be wholly ascertained until too late; that is, after the organ is erected in position, and proved.

The calculation of Seidel, apportioning the relative numbers of stops and congregation, does not exactly apply to modern English organs, half-stops and couplers not being taken into the account: with these exceptions it is good enough. Various other theoretical points of considerable interest to the constructors of organs, as well as of churches, displaying much ingenuity on the part of the writer, will be found in the work of Mr. Hopkins; which, if it has not occupied him the fifth part of the time employed by Dr. Burney, in his splendid history of music—namely, thirty years to meditate, and twenty to write and print,—must, nevertheless, have cost him much time and great research.

A copious Appendix, containing an account of foreign and native organs, concludes this history of an instrument, whose progress to excellence from trifling beginnings once more recalls the words of Cicero:—

"Omnium rerum principia parvum sunt, sed suis progressionibus usu augentur."

WORKS AT THE ARCHITECTURAL EXHIBITION.*

Your enthusiast after "the northern energy," and your lover of Italian grace, each sees but the half of what is just now on the walls of the Suffolk-street Galleries. *We*, happily, are not demanded:—"Under which king, Bezonian? speak or die,"—but, instigated both by public duty, and private feeling and conviction, can essay to gather at every hand. Assuredly, not from one seed, but from many, will the architecture of our day shortly grow to vigorous life. Whoever "narrows his mind" to observations in either direction restrictedly, is, to some extent, retarding what all desire. Nay; could we concede that the architecture of the future would be "Gothic," or could we concede that it would be "Italian," we should say that that architect would be unfitted for the development of his own style who confined his studies solely to *it*. Moreover, be it observed, architectural beauty is not *necessarily* produced by "constructive truth,"—any more than is the former possible with the *neglect* of the latter. Architecture becomes the grand and living art, only whilst it withdraws itself from the easy application of old names, and when it ceases to illustrate old dogmas and old styles. Unity of existing practice to the extent of what becomes style, we have indeed heretofore urged was much to be desired, for the sake of the opinions on art—amongst the public.

Hopeful as the position of the art is, its advancement is retarded by individual prejudice and professional *clique*. These things have a sort of relationship to something scarcely worse, —in short, to ignorance:—We are giving more space to this head than we usually afford to exhibitions; but the object deserves it. Whatever be the inferiority of the display of works,—having regard to talent existing in the profession,—the collection is full of matter of instruction to those who will make a study of it. The failing light of these wintry days, in what is surely the most ill-constructed gallery in London, is one difficulty which we feel in doing justice to the drawings. Some of the most important works we have still to mention.

Amongst the exhibitors of designs for buildings for important public purposes, Mr. E. M. Barry deserves praise for the number of contributions which he sent. Some of his designs are not so favourably circumstanced as they would have been, had the space permitted the whole of the drawings to be shown. No. 4 is an exterior view of Mr. Barry's "Competition Design for the Taunton Assize Courts and Judges' Lodgings,"—No. 471 being the plan of the principal floor, and an interior view of the

* See p. 630, vol. xiii.

Criminal Court. The drawing first mentioned shows a Gothic hall, flanked by the courts, public offices, and judges' lodgings. These portions are in a somewhat later style of architecture, with oriel windows, and chimney-shafts clustered at the angles, the materials being red brick and stone. Are all the chimney-shafts for use in their actual positions? It seems to us that the design has too much of the character of a college or residence, for the main object of the building. The ogee-capped turrets are beautifully designed. The interior of the Criminal Court is less satisfactory, as in the treatment of the apertures for ventilation.

Mr. E. B. Lamb's "Design for the Law Courts, Taunton" (37), deserves attention, though in parts it may be not free from what are eccentricities, rather than beauties of detail. In general arrangement it consists of a colonnade terminated by square blocks of building with coins; the front being further extended by low wings. Few windows are introduced, and these have the peculiar but effective rustic dressings which Mr. Lamb uses in some of his other designs. The whole is crowned by a low dome. The chief innovation is in the treatment of the order, which, generally, is the Italian Ionic. In place of the architrave stones, segmental rusticated arches are used, springing from column to column: the columns themselves are placed on lofty block plinths, with the angles chamfered; and at the lower part of the shaft, the flutes terminate in a peculiar kind of panelling, or elongated honey-comb work. In front of some of the columns are statues on lofty pedestals. The plan of the portico has much merit.

Mr. Barry exhibits several designs for the Oxford University Museum. To a nearly similar plan, there are two designs, one in the Italian style and the other Gothic. The view of the former (31), shows a quadrangular edifice, with structural masses at the angles, where salient Corinthian columns support sedent statues, these portions being terminated by an attic, crowned by vases. The order is continued by pilasters, and in these intermediate parts, the attic is exchanged for a blocking course, and vases of different character. At the principal front of the building, however, there is a colonnade, with a hexastyle portico and pediment projecting from it. It is, perhaps, to be regretted that there are windows at the back of the portico, as such arrangement is always liable to give the impression of discordance between structural utility and decorative appliances: but, nevertheless, the whole design is admirably well managed. The adjuncts of balustrades and steps would contribute to the effect. The Gothic design (32), has also merit. It has oriels, Burgundian arches to the window openings, an open battlement and pinnacles, and a porch divided into three bays. The ground plan and sections of another design, or one having the colonnade without the hexastyle portico, are also shown (382 and 381), as are other drawings of the several designs (404); and No. 498 gives elevations and sections, showing a lofty dome of glass in the centre. The design, which gained the second premium, was shown in the last exhibition of the Royal Academy, as noticed by us at the time.——Messrs. J. W. and W. Papworth's design for the same structure (50), displays an extended group of buildings, with Italian window dressings and pilasters (having chiefly, one story of windows, the upper story being lighted from above), joined by intermediate portions of two stories.——Mr. E. Ellis's design (51), has merely an order of three-quarter columns, and a hexastyle portico,—the glass roof of the centre quadrangle appearing. At the angles of the latter, are four lofty turrets, and the angles of the main building are formed by circular projections.——Mr. H. B. Garling's design (95), was one of the six selected in the same competition. It is Gothic, with traceried windows, square headed and pointed, with pinnacles, and open parapet, and high-pitched roofs. The details are marked by care in design and drawing.——The design of Messrs. W. Young and G. Morgan (108) has a low front with arched windows, and an entrance-way of three arches, beneath a pediment, beyond which rises a tower with four semi-domes, and a cupola from the centre.

The successful design for the Birmingham and Midland Institute, recently given in our journal, is not exhibited; but there are several of the other designs. Mr. P'Anson's elevation of his design (81) evinces both high merit and originality. There are four lines of windows; the two upper stories being united under a range of piers and arches. In the plan, we should say, the quadrant-corners continue to the height of two stories only. The basement has two-light windows, with a simple moulding as pediment, in segmental form, and piers with "*bossages*," and rusticated work. The next story has plain windows, and piers with capitals or impost mouldings. These support a string course, of plain members, and a broad *facia* with the names of eminent individuals: and over this is an iron railing between the piers of the arcade. These piers have ornamental capitals, and the spandrils are filled in with ornament in circles. The cornice has a peculiar character, and may be described as cut into a range of arches, over a deep frieze, and has its upper part formed by broad flat members. Throughout the design, the common forms of mouldings seem to have been avoided; and a similar tendency is to be noticed in many other designs which are amongst the best in the exhibition. The ornament is chiefly in minute coloured patterns; and contributes all the more to the success of the general effect, from its being sparingly introduced. Indeed, the design exemplifies the extent to which polychromatic decoration may aid in effect; but beyond which it should rarely travel. Over the centre of the front is an attic-like termination, with a long panel filled with sculpture. It is finished with a railing, and groups of sculpture at the angles. There are three doorways;—that in the centre having a pediment supported by Persian figures on tall pedestals. One slight drawback to the effect of this excellent design, arises from the ascent of the ground at one end, which is allowed to cut off part of the basement.——Mr. James's design (85) is more commonplace in treatment. The upper part of the quadrant corners is formed as a screen of coupled Corinthian columns, backed by a wall for part of the height. Near the angles are salient columns coupled, supporting a crowd of figures in advance of an attic. The attics are crowned by groups from the chariot-race—with what reference to the object of the building, is not very apparent. The centre of the front displays a plain porch and some ordinary window-dressings; and there is a lofty inclosing-wall to the area, and pedestals with equestrian figures of Wellington and Raglan, and a monument to Watt. Elevations of the same design are in another room (401-402).——Messrs. Lockyer and Martineau exhibit their design in No. 403.

None of the architects connected with the Royal Academy have ventured to contravene an understood regulation against exhibiting elsewhere, except Mr. Smirke. He gives a view of the Carlton Club-house (156).——Professor Cockerell is represented by Mr. Goodchild, in an excellent drawing, notwithstanding its exaggeration (53), of one bay of "The Interior of St. George's Hall, Liverpool."——Mr. P'Anson's design for the proposed ceiling to Merchant Tailors' Hall is shown in No. 78. It is a flat boarded ceiling in panels, with coloured enrichment, and main supporting girders.——The same architect's "Screen," lately placed in one of the entrance corridors of the same hall (103), has a range of arches rising from columns, with much novelty in the enrichments, which partly consist of coloured marbles, arranged in square and circular panels.——Mr. C. J. Richardson, besides an Elizabethan "Design for a Blind School" (148), contributes a "Sketch of a Design for a London Club-house" (256), which we believe was amongst the drawings noticed by us some years since, amongst those sent in competition for the Army and Navy Club; as also Mr. Brakspear's design for that building (369).

THE NEW CONVICT PRISON.—It is stated that the new convict prison in the course of erection at Chatham has already cost about 200,000*l.*; and, it is supposed, will accommodate 1,000 prisoners.

PROVINCIAL NEWS.

Banbury.—At a late meeting of the local Board of Health, it was determined to proceed with the plan for the erection of gas-works to supply the public lamps of this town with gas, according to a plan suggested by Mr. Atkins, of Oxford, engineer. The old gas company, however, whose present charge per lamp is 3*l.* 17*s.* 6*d.* were anxious for arbitration; and it is said that an arrangement has since been arrived at, by which the old gas company submits to a reduction of one-sixth of the present high price for lighting the town.

Brighton.—A large and influential meeting of noblemen and gentlemen connected with the county of Sussex was held here on Friday in last week, for the purpose of taking preliminary steps for the establishment in the county of Sussex of a Reformatory School for juvenile criminals. The Duke of Richmond was named president of the institution The cost of the buildings is not to exceed 800*l.*

Dowlais.—The gas-works scheme at this place is now fairly launched, and will very shortly be carried out.

Manchester.—The new Public Hall in advanced progress in Peter-street is to retain its old name of "Free Trade Hall." The design is most nearly allied to the Venetian form of Italian Cinque-cento architecture. It is composed of two main divisions, both arcaded, and is surmounted by a frieze, decorated with festoons and circular panels (which will probably be carved in relief), and by a cornice with dentils and modillions: above the whole is a balustrade. A contrast results from the comparative plainness of the lower story, together with the broad undecorated angles of the building, and the architectural accessories of the upper arcade. The lower arcade (which will afford shelter for visitors to the hall) is formed by broad piers with moulded bases, and ornamented imposts of ears of corn in the form of a *fleur-de-lis*, from which spring moulded archivolts. There are nine of these arches, extending the length of the front (156 feet). The upper story is formed by coupled attached columns of the Italian order, on pedestals, each pair of columns supporting an entablature. From the pier thus formed, to each adjoining, runs a moulded archivolt and ornamented key-stone, which enclose a semicircular space, to be enriched with allegorical subjects in alto-relievo. Beneath the sculpture a fret is introduced; and the spandril spaces here are also enriched with foliage, musical instruments, and wreaths, each of the latter circumscribing a spot of red granite. Each space between the pairs of columns has a window, with architrave, trusses, and pediment.

Keswick.—A company has been formed to supply the little town of Keswick with pure water from the breast of Skiddaw. A capital of 3,000*l.* in shares at 5*l.* each is to be raised (the greater part was subscribed for at the first meeting), and it is expected that the town will be supplied with this water next summer. Baths and washhouses are to be erected, and it is believed that a good system of sewerage will speedily follow the introduction of the water.

CHURCH-BUILDING NEWS.

Peterborough.—Improvements are still being carried on by the Dean and Chapter of Peterborough. Mr. Thompson's workmen are employed in scraping off the whitewash from the pillars of the apse at the east end of the cathedral, which was lighted with gas on Christmas-day for the first time, under the superintendence of Mr. Skidmore, of Coventry.

Portsea.—The new cemetery for the parish of Portsea was consecrated on Thursday before last, by the Bishop of Winchester. Mr. C. B. Smith was the surveyor; Mr. G. Rake, the architect; and Messrs. Backhurst and White, the builders employed.

Worcester.—A small lancet window in the church of St. Michael's, in this city, has been recently filled in with stained glass to the memory of a late relative of the rector. The subject of the window is a figure of St. John the Evangelist in the centre, with the Agnus Dei above; and below, the emblem of the Saint, an Eagle, with the Saint's name on a scroll; the whole surrounded with a bordering. The

design was furnished by Messrs. Rogers, of this city.

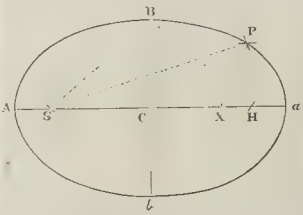
Trowbridge.—The consecration of the new cemetery was solemnised on Thursday before last by the Bishop of Salisbury. The cemetery is situate on the road to Staverton, about half a mile from the old church. It is 10 acres in extent, divided into equal portions by a road, planted with a line of yew and other shrubs to the extremity. There is an entrance-lodge for the warder's residence, built in the Decorated style of Edward I. The chapel on the Dissenters' ground is cruciform, the tower surmounted by a spire springing from an octagonal lantern, resting on a substructure of two stories, with traceried windows, open archways, and central columns. The interior is lighted by four triplet windows. The roof is boarded oak, the floor paved with variegated encaustic tiles. The consecrated chapel altogether differs from the other, although both are of the Early English style. These mortuary chapels, the lodge, and the general plans of the cemetery, were entrusted to Mr. C. E. Davis, of Bath. The contractor was Mr. William Smith, of Trowbridge.

Bristol.—A new church or chapel has been erected in the city gaol, at the expense of the governor, Mr. Gardner, by whose public spirit, it appears, not only has a much needed building been provided, which, with free labour to be paid for, would have cost the city a large sum of money, but additional store accommodation and additional cells for fifteen or sixteen prisoners thus obtained, so as to obviate the contemplated erection of a new wing to the gaol, which, it is said, would probably have cost 5,000*l*. The chapel is oblong, lighted by pointed windows, in the east front and on either side. Fitted up in the ordinary way, it would seat 700 or 800 persons; and arranged as it now is, so as to have a separate distinct box for each prisoner, there are places for about 170 of the latter. At the east end is a gallery and organ-loft. The gallery, which extends the whole width of the chapel, and half way along either side, is for the officers of the prison; while the whole width of the building on the west end is occupied by the stalls, extending tier upon tier, from the floor (one row of boxes overlooking the other), from the centre of the chapel to about midway up the west wall. These boxes, which are each pews for single persons, are so constructed that, while the inmate can see out in front, and be seen by the chaplain, governor, and officers in the gallery, he cannot see or be seen by his neighbour in the next box. The centre of the ceiling is painted and decorated in somewhat of a Romanesque fashion, sloping down on either side in panels, which, as well as a large compartment against the west wall, are left open for any subjects in fresco painting that private or public liberality may be disposed to pay for. The front of the gallery is carved, some coloured glass introduced into the windows, and a good organ has been erected. The chapel will be opened some time in the present month, with a full musical service.——A correspondent of the *Bristol Mirror*, who takes an interest in the completion of St. Mary Redcliff Church, suggests that if the various professions and trades were to do their part in getting up separate subscriptions, with which different or distinct portions or compartments of the requisite works could be accomplished, much progress might be made, and an emulative spirit excited, which would lead to still further endeavours. Being himself a commercial man, he proposes the organization of a society, to be called, "The Commercial Society to aid in the Restoration of St. Mary Redcliff Church." It would be premature, he thinks, to fix a limit to the operation, and, perhaps, too much to think of undertaking the tower; but a part—say, the north transept window, or the south porch, might be aimed at, and either would be desirable. He suggests that the work should be called "The Colston Memorial."

Wolverhampton.—The porch and south aisle and west front of the collegiate church of this town have been so far completed as to enable the contractors, Messrs. G. and F. Higham, to remove the barricading at the western door. A temporary iron railing has been erected, and a temporary door put in. The reason why this part of the restoration has not been completed is, that funds are required to finish it according to the design of the architect, Mr. Ewan Christian, of London. It is proposed to put in new jambs and arch to the doorway of the south porch, and to substitute a new door in the place of the temporary one. The arch will be filled in with tracery in character with the other part of the structure, and with glass. The restoration of the church, up to the present time, comprises,—new parapet and pinnacles to tower, new clerestory and roof over nave, restoration of west front, new oak roof to south aisle, and restoration of stonework to south aisle and porch. The church has been drained throughout. It is proposed not to go further till spring. The only part of the work which now remains to be done is the restoration of the north aisle and south transepts.

Newcastle-upon-Tyne.—Long Benton Church has undergone considerable repairs. The roof has been raised, unsightly pews in the chancel removed, and stalls substituted. Four of the side lancets, as well as the eastern window of the chancel, have been filled with stained glass. The subjects are;—In the centre light of the triplet, the Lifting up of the Brazen Serpent in the Wilderness, surmounted by the Crucifixion, "Type and Antitype," John iii. 14. On the right is a representation of our Lord's Baptism, by John; and, on the left, His Last Supper, emblematic of the two sacraments. The four side windows contain figures of the Four Evangelists, distinguished by their symbols. The artist was Mr. John Hardman, of Birmingham. The space within the altar-rails has been laid with Minton's encaustic tiles.

GEOMETRICAL PROPERTIES OF CONIC SECTIONS.



ARTICLE I.—THE ELLIPSE.

IN the following articles it is proposed to examine (without attempting mathematical demonstration) the leading properties of the curves called the conic sections, for the benefit of those who have not acquired sufficient elementary knowledge of mathematics to enable them to study and comprehend the various treatises written upon this subject; referring those who require further demonstration to those numerous works.

The term "conic sections" has been applied to certain important curves, which were originally obtained from a cone having a circular base, by cutting it with planes varying in their directions.

The first and most important of these curves is called the *ellipse*, and is obtained from the cone by a plane passing across it in any way, provided that it cuts completely through the cone from side to side: the outline of this section will then be an *ellipse*.

The following is one of the commonest methods of drawing an ellipse, of which the length and breadth are given:—

Let the lines A *a* and B *b* represent the length and breadth of the ellipse, drawn at right angles to each other: with B as a centre and the half-length C A as a radius, draw arcs cutting the axis A *a* in S and H: then take a string tied at each end to a pin, the length of string between the pins being equal to the length A *a* of the ellipse: fix one pin at S and the other at H: then, by moving a pencil, so as to keep the string always stretched, the curve will be drawn.

This method of drawing the curve shows us one of its important properties, namely, that if P is any point on the curve, *the distance* S P *added to the distance* P H *is always equal to the length* A *a*.

The length, A *a*, is called the *major axis*, and the breadth, B *b*, the *minor axis*: the points S and H are called the *foci*, for reasons hereafter to be explained. The point C, where the *axes* intersect at right angles, is called the *centre* of the ellipse. Any line, as S P or H P, drawn from one *focus*, S or H, to the curve, is called a *radius vector*. By making use of the before-mentioned property, we can find any number of points on the curve, which will enable us to draw in the ellipse by hand, thus:—

Take as a radius the length A X, X being any point between C and H: then with S as a centre, describe an arc of a circle, and with X *a* as radius, and H for a centre, draw another arc, cutting the former in P, which will then be a point on the ellipse, since S P + H P = A X + X *a* = A *a*.

This method is called drawing an ellipse "by points," since the curve is obtained by finding a succession of points in the same manner in which P was found. Two or three points will generally be found sufficient to enable a person tolerably apt with the pencil to sketch in the quarter of an ellipse; and is practically more correct than the former method of continuous motion, which, although theoretically exact, is liable to error, from the stretching of the string and other mechanical causes. There are other means of drawing an ellipse "by points," which will be explained hereafter.

If we examine the figure, we shall see that as we move the point S towards C, the point B will move upwards, since S B is always equal to C A. If, therefore, we suppose S to move quite up to C; then the distance S B becomes the same as C B, or C B becomes equal to C A, in which case the ellipse becomes a circle. Again, as S moves away from C towards A, the curve becomes more flat, or is said to have a greater *eccentricity*. The measure, therefore, of the *eccentricity* of an ellipse is the ratio or proportion of C S: C A, the value of which must always lie between nothing and unity. In the orbit of the earth round the sun, the *focus* S is very near to C, or the ellipse is nearly a circle, the *eccentricity* being very small; whilst in the orbits of the comets, the focus S is very near to A, and the *eccentricity* is nearly equal to unity.

E. W. TARN, M.A.

THAMES ESPLANADE AND RAILWAY.

A COMPANY has just been registered under the title of the "River Thames Esplanade, Railway, and Sewage Company." The promoter, Mr. Wieland, of Glasgow, proposes to construct river walls on both banks of the Thames, extending from London-bridge to Westminster-bridge, with the view of improving the channel and navigation, while increased wharfage accommodation would be given by means of quays and archways extending inwards from the river a depth of 120 feet. On the north side of the river the quay is to be 40 feet wide, and 80 feet in depth from the quay is to be covered by a double row of groined arches, 35 feet span, and about 35 feet in height. It is proposed to raise a road or esplanade on the top of these arches 80 feet wide, running parallel to the river on the level of the various bridges from London-bridge to Hungerford-market. On the river side of the esplanade is to be a parapet and balustrades, and on the land side a row of handsome shops, warehouses, or offices. Underneath would be a series of warehouses communicating with the quays. On the south side of the river it is proposed to adopt the same plan, with the exception that the esplanade would only be 40 feet wide, and on the greater portion of it the warehouses above the shops would give way to private dwellings, built in flats, on the Scotch and Parisian plans. The esplanade on either side of the river is to form junctions with the bridges and leading streets. It is also proposed to form an additional railway under the arches of the railway on the Middlesex side of the river from London-bridge to Hungerford-market. Another feature of the scheme is to prevent the pollution of the river Thames by conveying the sewage from the mouths of the present sewers to convenient spots, where it may be deodorized and converted into manure for agricultural purposes. The importance of the object is admitted on all hands: what is wanted is a practicable mode of effecting it, and this the company will have to show by details. The Thames ought to be embanked, and it will be, we have no doubt: it is simply a question of time and the right man.

THE RENAISSANCE COURT OF THE LOUVRE, PARIS.

[See p. 1 in present number.

A REMNANT OF THE BLACK FRIARS IN THE *TIMES* OFFICE.

In our last volume we gave illustrations of those parts of the ancient wall of London which then existed, and some historical particulars.* One of these masses was situated beneath the *Times* Printing-office, which stands where the wall was, up to about the time of Edward II. Urgent want of space has led to the removal of the old wall since our notice appeared, and now we have to mention the discovery of a portion of the building which succeeded the more ancient wall.

The Black Friars came to this site (from Holborn) in 1276, Rokesby, mayor of London, having procured it for them. Robert Kilwarby, Archbishop of Canterbury, built the church for them in the early part of the reign of Edward I. In 1282 they obtained license to break down the city wall, and remove it westward, for the enlargement of their church, which was then made very spacious. Fig. 2, on p. 223 of our last volume (XIII.), shows how the position of the wall was altered. After the dissolution of the monastery, the church was pulled down: and here we now have the plinth and foundation of one of the buttresses brought to light, after being buried 300 years; to turn up in such a position, too,—in the midst of the printing-house of the *Times* newspaper. The plinth stands on a mass of ragstone and chalk, 6 feet high. The plinth itself projects from what was the face of the wall, 4 feet 5 inches from east to west; is 2 feet 6½ inches wide, and 2 feet 4 inches high, including a chamfer, 2 inches high, which runs round it. Close to the buttress, on the south side of it, is what would seem to have been the jamb of a doorway. It is interesting to reflect on this remnant of the mediæval church, grown round and pressed out of sight by the most wonderful and momentous result of intelligence, organization, and capital, in the world. The conjunction is a fit subject for a poem.

Want of room will necessitate the removal of the old remnant, and we have thought it right therefore to note its discovery and nature.

* See pp. 221 and 269.

THEATRES AND SCENERY.

Christmas pantomime and extravganza have of course produced much new scenery, and various mechanical devices of the old Lyceum character,—some of the latter, as, for example, the transformation scenes at *Drury-lane* and at *Covent-garden*, very clever, costly, and brilliant. Nevertheless, we are disposed to complain of our scene-painters generally on the present occasion, as not exhibiting any advance, indeed scarcely maintaining their position. Mr. Beverley, at the two theatres already named—excepting the mechanical scenes—has done nothing worth mentioning.

We do not mean to say there is no pretty scenery: the opening scene in "The Maid and the Magpie," at the *Princess's* (a capital pantomime, by the way, full of fun and bustle), is very elegant, and so, too, is the transformation scene. Again, Mr. Callcott's landscape scenery for the introduction to Mr. Buckstone's very good pantomime at the *Haymarket*, "The Butterfly's Ball," is highly meritorious, (the insect performers, by the way, are capitally dressed); but, remembering what they do in Paris, we must still urge our artists to advance. We find little solid, honest, first-class painting: and yet we know very well we have men who could do it if they would. We see no such scenes as the "*Fête de L' Ane*," and "The Entry of Charles VII. to Paris," in the piece called "Paris," which has been played for some time at the theatre of the *Porte St. Martin*,—fine pictures, most artist-like, and real. At some of the minor houses the scenery is simply false and disgusting: the managers ought to be prosecuted for injuring the public taste.

Mr. Webster is about to rebuild *The Adelphi* on an enlarged scale, and intends to raise money for this object by debentures. We have not yet seen his Christmas piece, but shall make an opportunity to do so.

At the neat little *Olympic*, pleasantly redecorated, Mr. Planché has provided Mr. Wigan with an extravaganza, called, "The Discreet Princess," wherein Mr. Robson displays great variety and marvellous power. Some of the scenery is very good,—very creditable to Messrs. Gray and Craven; but if we were they, we would set to work and repaint the interior of the round tower in good perspective. The piece, as a dramatic invention, is one of the best Mr. Planché ever wrote, and that is saying much: it is full of point, and will be played 100 years hence.

Queen's Theatre and Opera House, Edinburgh.—This new theatre, built on the site of the Adelphi Theatre, destroyed by fire in 1853, is now completed. It has been designed by Mr. David Bryce. The house will hold 1,800 persons, seated—the stalls and stall-boxes affording accommodation for about 150, the pit for about 350, the boxes for about 300, and the upper boxes and gallery for about 1,000. The first or grand tier of boxes is nearly on a level with the stage. Immediately over these are the second or upper boxes; and above these again, the gallery, with a few seats fitted as boxes on each side of it. The house is lighted, under the dome, by a central light of colored glass, by Messrs. Ballantine and Allan, and by a number of crystal lustres furnished by Mr. Sim, of Princes'-street. The stage, which is 58 feet long by 62 feet broad, having a width of 32 feet at the proscenium, has been fitted with the newest appliances of stage mechanism. The drop-scene is a view of the royal residence at Balmoral.

The Lyceum Theatre, Sunderland.—This theatre has been burnt to the ground. It appears that workmen had been engaged until a late hour making preparations for the Christmas pantomime, but the origin of the fire has not yet been accounted for.

SURREY COUNTY GAOL, HORSEMONGER-LANE.

In July last a building committee appointed by the Surrey magistrates in quarter sessions, for the purpose of obtaining plans for the alteration and conversion of Horsemonger-lane gaol from the "associated" to the "separate" system of imprisonment, invited designs in competition from the following three gentlemen,—Mr. Lapidge, the county surveyor; Mr. Hill, the architect of the Wandsworth gaol; and Messrs. Banks and Barry, of Sackville-street, London; on the understanding that the plan approved by the committee was to be carried out on the usual terms by the successful competitor, and that if Quarter Sessions should not confirm the decision of the committee, then that 100*l.* was to be paid to the author of the plan which was declared by the committee to be the best. The committee met early in September to receive these plans. Two sets only were however submitted, by Mr. Lapidge and by Messrs. Banks and Barry. Mr. Hill sent a report, declaring that the present gaol was incapable of conversion; and that nothing would do but to build an entirely new one. Such a proposal the committee were not in a position to consider, and they ultimately came to a resolution, "That the plan by Messrs. Banks and Barry was the better of the two submitted to them, but that they did not feel justified in recommending the court to carry it out, on account of the large difference in expense between that and Mr. Lapidge's plan, and recommended, under the circumstances, that Mr. Lapidge's plan, with such modifications as might be decided on by committee, be ordered to be carried out by the court, at a cost not exceeding 10,000*l.*"

On learning this, Messrs. Banks and Barry addressed the committee, pointing out that they had in their instructions given no limit of cost, nor had even recommended economy, simply specifying their requirements. That, consequently, these requirements, with several others not asked for, were proposed by Messrs. Banks and Barry without stint of cost, and in the most complete way that could be done, and that the committee having allowed this, as also that their plan was more ample and complete than that of Mr. Lapidge, it seemed inconsistent with the promise in the original instructions to resolve that Messrs. Banks and Barry's plan was the best, and yet to recommend the court to adopt one less good, without giving those gentlemen the opportunity of modifying their plan to meet an expenditure then determined on by the committee for the first time. They further expressed their full ability to make reductions sufficient to meet such stipulated outlay, without sacrificing any of the principles of the design which had gained for them the approval of the committee. This letter, with the report of committee, was read in Quarter Sessions, held at Kingston on 16th October, and a unanimous resolution was the consequence, "That the plans be referred back again to the committee for review and reconsideration, with orders to report again."

On the 7th November, the committee again met, and resolved, "That Mr. Lapidge and Messrs. Banks and Barry be informed that the committee wish to have the best plan which can be made of which the cost does not exceed 10,000*l.*; and that the best plan complying with the above conditions, if approved by the committee and the Government inspector, will be recommended to the Quarter Sessions for adoption."

Mr. Lapidge and Messrs. Banks and Barry submitted; therefore, amended plans to the committee on the 11th December, when the committee came to the unanimous resolution that those by the latter architects were again the best; and as they were accompanied not only by the architects' estimate for 10,000*l.* but by a tender from a London builder of eminence for their execution at that sum, that "the plans of Messrs. Banks and Barry be approved." It is expected that these plans will therefore be adopted by the Court of Quarter Sessions, and ordered to be carried into immediate execution, when the evils which have so long been the result of the associated system will be removed from this gaol, as they have already been by so many counties from their respective prisons with encouraging success.

COMPETITIONS.

Hastings Cemetery.—From ten designs of different competitors, one marked "Spes," was chosen; and on opening the enclosure accompanying it, the author was found to be Mr. H. Carpenter, of Hastings, to whom the premium of 10*l.* offered for the best design for laying out the ground, was therefore voted by the Council. On the plan selected, the Episcopal and Dissenters' chapels, with waiting-rooms and vestries attached, will form one block of buildings. The plan also contemplates the construction of catacombs at the end of the principal avenue, surmounted by a terrace consisting of a series of Gothic arches in the Decorated style.

Rugby Town-hall.—Having applied for particulars regarding an intended Town-hall, to be competed for, as per advertisement in your periodical, I am requested to send 2*s.* 6*d.* in postage-stamps first. It seems "the Board" are anxious to procure designs from architects, and subscription at the same time to pay expenses for advertisements. I hope the profession will set their faces against such a scheme.

Architect.

OPENING OF BOLTON NEW MARKET-HALL.

On Wednesday, 19th ult. the new Market-hall at Bolton was opened, with masonic and other ceremonial.

The plans for a new market-house were advertised for end of the year 1850; for the best design 50*l.* and for the second 30*l.* being offered, the cost of the building not to exceed 17,000*l.* and the area to be 7,500 yards. Twenty-four plans were sent in from architects in different parts of the kingdom; and the markets committee ultimately fixed upon that of Mr. G. T. Robinson, architect, now of Leamington; the second premium being awarded to Mr. Leigh Hall, of Bolton, architect. In May, 1851, Mr. Robinson was appointed architect, with 720*l.* for his services. The first estimate of Mr. Robinson was 18,000*l.* but this was subsequently increased to 26,700*l.* by additions. After this the erection of the Market-hall was contracted for by Mr. W. Tomkinson, of Liverpool; and the construction of the Knowsley-street Viaduct, across the Croal, by Mr. John Evans, of Darwen. The work connected with the Market-hall was commenced on 5th April, 1852.

Early in 1853 a sub-committee reported that the purchase of property for the site and approaches would, with the cost of completing the building, amount to at least 70,000*l.*; part of the property, however, being afterwards available. In April, 1853, and thereafter, it was found that the construction of the foundations of the basement-story arches was defective, some of the arches having fallen; and, after various procedure, the foundations were secured, and the whole of the sixty-six piers rebuilt. The error was attributed to neglect on the part of a clerk of works. After this the work proceeded safely towards completion, although, even still, it is not quite finished.

The building itself is a rectangular parallelogram, 294 feet 5 inches long, by 219 feet 9 inches wide, giving an area of about 7,188 square yards, or nearly 1½ statute acre, and is surrounded by four broad and spacious streets. The four fronts of the building are similar in design and character, though they differ somewhat in detail. That to Knowsley-street consists of a centre portico of the Corinthian order, and is upwards of 50 feet in height. The accommodation afforded by the market will be for upwards of 600 salesmen. The whole of the area is covered by rough plate-glass roofs, of 50 and 25 feet wide, the apex of the main one being nearly 54 feet from the ground

floor; and the glass consumed for that purpose weighs 80 tons, and measures 30,000 feet.

The glazing has been done by Mr. Hugh Makinson, of Bolton; the painting by Mr. William Peat; and the gas fittings have been erected by Messrs. Taylor and Galloway. The clerk of works during all but the earlier part of the construction was Mr. Matthew Jepson. The cost of the building, exclusive of the site, is estimated at 45,000*l.* The net income, it is estimated, will be 3,000*l.* a year, besides 1,000*l.* for property to sell or let.

In the construction there were 35,409 cubic yards of excavation; 12,028 cubic yards rubble walling; 13,645 superficial yards brickwork; 6,664 superficial yards flagging; 1,500 superficial yards gallery landings; 59,924 cubic feet of ashlar; 30,000 superficial feet of glass; 823 tons of wrought and cast ironwork.

The whole cost of the improvement, including bridge in Knowsley-street, approaches, paving, property purchased, and market-hall itself, has been estimated at 90,000*l.*

ARCHITECTS' AND ENGINEERS' CHARGES.

A CASE, the general heads of which I give you below, was tried in the Penrith County Court, on the 13th ult. As it may give a caution to some, I have thought it a proper subject for insertion in your widely-circulated paper, which I invariably find protects the profession when in the right, and exposes shabbiness on the part of employers.

Mr. Solomon Atkinson, barrister, in opening the case, said it was an action to recover the sum of 28*l.* 13*s.* owing to Mr. David Browne, engineer, for making drawings for the Penrith Baths and Washhouses. The defendants were Mr. William Bailey and Mr. Thomas Altham, two of the Provisional Committee.

Mr. Bailey, a man much respected in the town of Penrith, had died since the issuing of the summons and the hearing, which was most unfortunate for Mr. Browne, as he could have proved Mr. Bailey present at all the meetings, and thus have saddled the Provisional Committee with all the items of his bill. This he could not do as far as regarded Mr. Altham, who was not present at all the preliminary meetings.

The judge, in the course of the trial, said there could be no doubt that Mr. Browne had been employed to make the plans by somebody, and that the plans ought to be paid for; but as a question of law, Mr. Browne had failed in establishing Mr. Altham as a party throughout. He would therefore recommend that the parties settle it. This was ultimately done; the defendants (or Provisional Committee) paying over to Mr. Browne 25*l.*, which, with 5*l.* previously received on account, made a total of 30*l.*, the whole amount of his bill being 33*l.* 13*s.*, each party paying their own costs.

What I wish to show from the foregoing is this;—that engineers and architects ought to be very careful in taking minutes of all preliminary proceedings. In the first broaching of a project of this kind all is hurry; but when the pay-day comes, any legal quibble is taken advantage of to evade a just payment.

MACHINATOR.

THE CROW'S NEST ON ST. PAUL'S.

A RECENTLY published "History of the Corps of Royal Sappers and Miners" (Longman and Co.) gives the following particulars of the crow's nest erected on St. Paul's, during the ordnance survey of the metropolitan district:—"That above the cross of St. Paul's, from the dexterity with which the construction of the cradle at that dizzy height was pursued, supported only by the architectural ornaments of the structure, excited much curiosity and wonder. The scaffolding was of rough poles: the stage, 10 feet square, formed of planks which supported the observatory, rested on the golden galley on the top of the great cone. The four lower posts, 29 feet long, stood upon short planks, bedded on the stone footway; and the top supported the angles of four horizontal planks, each 23 feet long, bolted together at the angles. From these planks a screen of boards was erected to prevent materials, &c. from falling. The base of the four upper posts, 53 feet long, rested on the angles of the above planks; and the scaffold, in addition to these posts, consisted of four sets of horizontal and four sets of transverse braces, on each of the four sides, the whole being fastened together by spikes and ropes. Fifty-six of the uprights were double poles, placed base and point, and bound together with hoop iron and wedges, and with bolts and hoop iron at the splices. The height from base to floor was 82 feet, and to the extreme top of the observatory, 92 feet. A railing, roughly but securely put up, surrounded the 'crow's nest.' The ascent was by the inside of the tower or lantern to the circular opening, then to the outside of the foot ladders set at the north-east corner, parallel to the north-east principal post inside the scaffold. The whole of the materials were drawn up from the floor by a permanent windlass erected in the tower, to the golden gallery, and then passed to the outside, horizontally, through an aperture 32 inches wide, and finally were drawn up and put into position by purchase erected for the purpose. The whole construction weighed about 5 tons, and though designed by Sergeant James Steel, was erected by Sergeant James Beaton, the most successful builder of these aërial fabrics, assisted by privates Richard Pemble and John Porteous, and some civil labourers, under the direction of Captain Yolland. The time occupied in going up the ladder was about seven minutes, but the descent required only four or five. On the 2nd November, the last piece of scaffolding was removed and carted away. In the hazardous and intricate operation of building and dismantling it, not the slightest accident to human life or limb — not even the breaking of a single pane of glass—occurred.

THE METROPOLITAN BOARD OF WORKS AND THE VESTRIES.

AT the first meeting of the Board under the Act, on Tuesday, the 1st, Mr. Thwaites took his seat as chairman. It was resolved that the temporary charge of the sewers should be confided to Mr. Bazalgette. A committee was appointed to consider and report as to the appointment of officers. Mr. G. S. Hatton, the accountant of the late Sewers' Commission, is a candidate for re-appointment, and on public grounds we hope he will succeed.

Some of the vestries burdened with debt, already find themselves in considerable difficulty: many officers will have to be appointed. In Paddington the committee recommended that the salary of the surveyor be 300*l.* per annum. Mr. Charles Hill thought this insufficient for a proper man, and moved in the vestry, that it be 400*l.*; but the motion was lost by a small majority.

GENERAL MEETING OF THE INSTITUTION OF CIVIL ENGINEERS.

THE general meeting was held on the 18th ult. Mr. James Simpson, president, in the chair. In the report of the council, the Great International Exhibition of Products of Industry, held at Paris, was commented upon at some length, and was admitted to have been in some respects more interesting than that of London in 1851: there were better displays from the colonies: the machinery and wrought metals of the Continent generally, and the agricultural implements and machinery of France in particular, exhibited great progress, and the foreign machines for textile fabrics showed more attention to accuracy of fitting, and considerable advance in mechanical skill. These features were more apparent, in consequence of the inadequate manner in which many important branches of British industry were represented: for instance, there were only two English locomotives among the twenty railway engines exhibited,—fourteen of which, however, bordered on the system introduced by Mr. Crampton. The models of the great works of civil engineering were, with few exceptions, exhibited only by the Ministry of Public Works of France, and by members of the Institution of Civil Engineers, and a well-merited tribute was paid to the excellent and liberal spirit which animated the Fourteenth Class, composed almost entirely of French engineers, by whom the only two Grand Prizes of Honour were recommended to be awarded to Mr. Stephenson and Mr. Rendel, while the decoration of the Legion of Honour had been requested for Mr. Stephenson and Mr. Brunel, and a large number of Prizes of Honour, and of Medals of the First and Second Classes, and Honourable Mention, had been awarded to other Members and Associates of the Institution.

Feeling the importance of the occasion, the Council had not hesitated to deprive the Institution, even for an inconveniently long period, of the services of Mr. Manby, the secretary, in order to his proceeding to Paris to fill the post of vice-president of the Fourteenth Class (Civil Constructions), as soon as it was found that other members, who had been appointed to the jury, could not attend, and the manner in which the duties had been performed was noticed approvingly.

The statement of the receipts and expenditure of the past year showed, that the funds had, at last, reached the point to which it had been the object of the Council to bring them;—that there was an available balance sufficient for the annual publication of a volume containing the minutes of proceedings of the current session, and with any other funds that might be furnished, it was proposed to bring up the arrears of publication. The first part of volume XIV. for the session 1854-55, had been issued, and with it a statement of the subscription to the Publication Fund, in the hope that by thus directing attention to the subject, those members who had not hitherto contributed would be induced to do so.

It was also stated, that in order to facilitate the publication, the president had taken upon himself the entire expenses of the annual *conversazione*.

Notices of Books.

On the Advantages of an Act of Parliament to enable Owners of Settled and Encumbered Estates to borrow Money for their Improvement. By CHAS. F. HUMBERT. London: Piper, Stephenson, and Co.

THE subject of this pamphlet by Mr. Humbert, who is the agent of Lord Essex, is not altogether foreign to the views which have been habitually brought before the public in our pages. The author advocates either a general Act of Parliament, or an extension of certain existing Acts, to enable the owners of settled and encumbered estates to borrow money for their improvement, by the erection of farm-houses, farm-buildings, drainage, road-making, embanking, clearing, warping, irrigating, &c. &c. There are many landowners, having only a life interest in their estates, who cannot afford to lay out capital in the improvement of them, seeing that they could obtain no adequate return for it during their own lifetime; and yet the advantages of capital so laid out would be very great to those who succeed them in the property. It seems that money has been for some years advanced for drainage purposes only through the agency of the Inclosure Commissioners, and that many for other purposes can also be obtained through the various land companies. Mr. Humbert, however, wishes to have an Act passed which would enable landowners, by a very simple machinery, to borrow money for all kinds of improvement, the loan being secured by a rent-charge on the estate, of such an amount that principal and interest would all be extinguished in thirty years. The principle has acted beneficially as far as it has been applied hitherto in the Drainage Act, and in the Health of Towns Act; and it seems it would add much to the prosperity of landed property, and give a great impetus to improvement, if it could be extended in the manner proposed by Mr. Humbert.

VARIORUM.

"THE Business Man's Note-book for the year 1856," edited by Mr. James Hogg, jun. (a descendant of the celebrated "Etterick Shepherd," if we mistake not), has just been published at Edinburgh by Mr. James Hogg, and in London by Messrs. Groombridge and Sons The aim of this handy volume is to produce at once a Calendar, Diary, and Commercial Directory, specially adapted to the wants of men of business. Much of the routine matter of many other Diaries and Pocket-books has been wisely cast out, and much more valuable matter substituted. The contents are, indeed, as various as useful, and the special convenience of the building trades has not been overlooked. Besides a large quantity of both foreign and national statistics, &c. of importance to business men generally, the volume contains several useful and novel maps, and a metallic calendar fixed inside one of the boards, and which, by its rotary movement, forms a complete ready-reckoner of dates and days of week for many years to come. The same work nearly is issued in a form, and on paper, suitable as "The Desk Directory." Both contain writing-paper, with alphabetical letters, and the weeks and months printed on it for lists and notes.——For the special purposes of education, in country districts where the young may be likely to enter on life in agricultural pursuits, a "Catechism of Practical Agriculture," by Mr. H. Stephens, F.R.S.E. author of "The Book of the Farm," has been published by Messrs. Blackwood, of Edinburgh and London. The idea is an excellent one, and is well carried out. The Catechism is fully illustrated with engravings of various tools, processes, utensils, &c.—more readily described in this way than by mere words,—and on the whole, this little Catechism is destined, we doubt not, to do much good in agricultural education, and it might be

imitated with advantage in other pursuits besides agriculture.——"The Factory Controversy,—a Warning against meddling Legislation," is a vigorous pamphlet by Harriet Martineau, who seems to be renewing her politico-economical youth. We refer to the intellectual energy of the celebrated writer however, and not specially to the merits of the question itself. The author takes up the cudgels on behalf of the factory occupiers, and against those philanthropists who have been exerting themselves to compel these occupiers to fence their machinery for the prevention of those cruel accidents of which one every now and then hears. No one is more capable of taking a cool, disinterested, and enlarged view of such a question than Harriet Martineau, and she does this on general grounds, and not as a mere sworn defender of factory owners. The pamphlet was offered, in shape of an article, to the *Westminster Review*, but the editor "started back" when he read the MS. and refused to publish it. It is now "issued by the National Association of Factory Occupiers" at Manchester.

Miscellanea.

LATEST NEWS FROM ADELAIDE, AUSTRALIA.—By last advices, the colony was busy with elections of representatives, to the exclusion of almost everything else. A little church-building news is all that has been forwarded to us. The first stone of the new church of St. Luke, Whitmore-square, Adelaide, was laid on 11th September last, in due Masonic form, by the Governor-in-Chief of South Australia, Sir R. G. Macdonnell, who is a member of the Freemasonic Order. From 1,500 to 2,000 persons were present, and afterwards a grand banquet was held at the Napoleon Bonaparte, the new entrance-hall and staircase of which were opened on the occasion. At a previous meeting of the church subscribers, it was announced that the iron church sent out was so damaged by salt water, that it had been surveyed and condemned as unfit to be erected. It was therefore to be sold by auction, and the stone church proceeded with forthwith. Two comfortable iron cottages were already up for the parsonage.——The Free Presbyterian Church at Smithfield, Gawler Town, was opened on 26th August. The building is described in the "Adelaide Observer," as a very neat structure, in the early English style. It has four lance-shaped windows on each side, and a triple window at the east end over the door. It is well fitted up with open seats, and is capable of holding about 200 persons. The cost of erection was rather more than 1,400*l.* ——The Wesleyan Chapel, at Nairne, was re-opened on 26th August. The new building, 45 feet by 25 feet in the clear, had cost 787*l.* odd. The pulpit and seats are of cedar.

NEW CHURCH IN SMITHFIELD.—It is proposed to build in Smithfield, for the destitute parish of St. Sepulchre Without, a church capable of accommodating 1,000 persons, in memory of the martyrs of 1555-1558.

THE VICTORIA DOCKS. — These newly-opened docks (of which, when in progress, a view was given in our pages) comprise about 100 acres of water. The printed reports of the company give the following comparative estimates, without pretending, however, to extreme accuracy:—Liverpool Docks, about 200 acres of water, cost 6,000,000*l.* or 30,000*l.* per acre; St. Katherine, London, East and West India Docks, about 155 acres of water, including works now in progress, cost about 8,500,000*l.* or 55,000*l.* per acre; Victoria Docks, probable minimum extent 200 acres, with the Steelyard Estate, and intended warehouses thereon, cost 1,200,000*l.* or 6,000*l.* per acre.

PROGRESS OF IRON IN NAVAL ARCHITECTURE.—The relative advantages of iron and wood masts for a ship of 1,000 tons, are stated in the *Birmingham Journal* as follows:—

	Iron Masts.		Wood Masts.
Cost	1·00	—	0·75
Duration	1·00	—	0·25
Strength	1·00	—	0·66
Weight	1·00	—	1·40

Taking cost and duration together, iron masts are about one-third the price of wood, while they are one-third lighter and one-third stronger. This has now been demonstrated, it appears, in the case of the *Aerolite*, built by Mr. Lamport, of Workington, the patentee of iron masts. This vessel was furnished not only with masts but bowsprit of iron. After a voyage to Australia and China, in which she experienced severe weather, her masts and bowsprit were examined, and found to be in as good condition as the day she started.

FILTERED WATER.—From Monday last two provisions in the Metropolis Water Act will take effect. Water is not to be brought within the metropolis in open aqueducts, and every company is effectually to filter all water supplied by them within the metropolis for domestic use, before it passes into the pipes for distribution, excepting water pumped from wells into covered reservoirs or aqueducts, and not afterwards mixed with unfiltered water.

PLACES OF RECREATION FOR THE WORKING CLASSES OF BIRMINGHAM.—A public meeting was held at the Temperance Hall, Ann-street, Birmingham, on Wednesday in week before last, in furtherance of this scheme, the Hon. and Rev. G. M. Yorke presiding, when it was resolved that the recreations be open to young men of eighteen and upwards; that they consist of literary and newspaper reading, lectures, vocal and instrumental music, chess, draughts, bagatelle, backgammon, bowls, quoits, skittles, tennis, singlestick, fives, and gymnastics generally; that no gambling be allowed; that no smoking be permitted, unless in a room for the purpose; that the charge of admission be one penny; that refreshments be provided, but intoxicating liquors excluded. It was ultimately agreed that females be admissible to concerts, &c., by payment made at the door, on occasions sanctioned by the Committee, provided that such entertainment be separate from other recreations. A Managing Committee of fifty members was appointed, including ten working men.

ELECTRIC POWER.—The Emperor of the French, some time ago, offered a prize to him who should discover an electric motive power which should be capable of competing successfully with steam. It is said it may be looked upon as a *fait accompli*, and that M. Dubosc is the fortunate individual whom science and wealth will overwhelm with their honours and gifts. It is said that the model will work, for twenty-four hours, at a cost of thirty centimes, a wheel that is capable of overcoming a resistance of fifty pounds.

PROPERTY SALES AT GLASGOW.—Of five sales of properties to have taken place in the Exchange Sales-rooms, Glasgow, on Wednesday week, two properties only appear to have obtained purchasers, viz.—100 yards ground, 148, 150, Stirling-road, sold at the upset price of 80*l.* Dwelling-house flat, 17, Monteith-row, sold at 465*l.*, being an advance of 15*l.* above the upset price.

THE FOUNTAIN FOR BATH.—A member of the committee states that seven designs were tendered instead of "twenty-eight," five of which were by the *profession* (three of them being from the most eminent architects of this city), and two by amateurs." He further says,—"There were no reasons, on account of ability, for preferring an architect to carry out the erection of the design by the 'cabinet-maker,' but other peculiar reasons which need not be related here." Here the matter may stop at present.

THE IRON TRADE OF THIS AND OTHER COUNTRIES.—In a paper read at the Society of Arts, on 19th ult. by Mr. J. K. Blackwell, F.G.S. it was stated that the annual production of pig-iron in this and other countries appears, from a careful comparison of various authorities, to be at the present period nearly as follows:—

	Tons.
Great Britain	3,000,000
France	750,000
United States of America	750,000
Prussia	360,000
Austria	250,000
Belgium	200,000
Russia	200,000
Sweden	150,000
Various German States	100,000
Other countries	300,000
	6,000,000

About four-fifths of the iron produced is made in nearly equal proportions in the three great districts of South Wales, South Staffordshire, and Scotland. Northumberland and Durham follow next, and then Yorkshire, Derbyshire, Shropshire, North Staffordshire, North Wales, Cumberland, and Gloucestershire, complete the list. The only blast furnaces now existing in which iron is smelted with charcoal are those of the Newland Iron Company, near Ulverstone, and at Lorn, in Argylshire, supplied by the hematites of Ulverstone, and producing about 2,000 tons of iron annually from one furnace in blast in each district. There exist in Ireland immense deposits of clay carbonates, and it becomes a question of vast importance, adds Mr. Blackwell, whether the great resources of vegetable fuel, in the shape of peat, in which that country abounds, might not be advantageously employed in the production of iron of first-rate quality from it.——At the preliminary quarterly meeting of Masters, held on Thursday in last week, at Dudley, no further attempt to raise prices was made, so that the nominal prices of 9*l.* for bars, 10*l.* for hoops, and 11*l.* for sheets, were left unaltered.

DESTRUCTION OF PROPERTY BY BURSTING OF WATER-PIPES. — The late severe frost, followed by sudden thaw, was attended with great damage to property, from the flooding of warehouses and shops, at Manchester, consequent upon the bursting of water-pipes. About fifty warehouses were more or less flooded. In one case at a private dwelling, the breastwork of a chimney, the chimneypiece, and the fire-place were blown down, the contents of the room and the fire that was in the grate scattered in all directions, strong boxes and portmanteaus broken, and a bed set on fire.

WOODHOUSE'S PATENT CROSSING FOR RAILWAYS. —This patent consists, as described, in so constructing the rails of crossings that when one part of the wing rail is injured by wear it may be reversed, to bring another portion of the same rail in the place that had been worn; also in substituting the check rails for the wing rails, and using them in the same way. The ends of the wing rails and check rails are of the same length and bent to the same angle; consequently, the wing rails may be used as check rails, and *vice versâ*. By reversing the positions of the rails when partly worn each wing rail can be used four times, and when they are unfit for use as wing rails they can be put in the places of the check rails, and the check rails may then be used as wing rails, thereby enabling the wing and check rails of a crossing to be employed sixteen times before they are completely worn. The improvements are said to be particularly beneficial when the double-headed rails are used, but useful in all other descriptions of rails. The advantages claimed for this crossing are, simplicity of construction and great saving in maintenance, both as regards labour and materials.

LIPTON-PARK, DEVON.—This property, together with some other farms contiguous, has been purchased through Messrs. Meredith and Co. of Lincoln's-inn, for Mr. Henry Blagrove, who takes possession of the property on Tuesday, the 8th inst. The principal part of the mansion was taken down about Midsummer, 1854, and has since been rebuilt and completed, with considerable additions and repairs to the stables, coach-houses, and offices, under the direction of Mr. R. S. Cornish, architect. Mr. G. H. Julian was clerk of the works, and Messrs. Gill and Ede, of Launceston, were the contractors. In addition to four complete sets of buildings erected and extensive repairs on different farms, a commodious dwelling-house, with complete set of farm buildings, has been erected on each of eleven different farms belonging to this property, by contractors, varying from 1,500*l.* to 2,000*l.* each, under the same architect. Mr. John Laskey and Mr. Edwin Luscombe superintended the various works, which are now completed. In draining and other improvements of the land, considerable sums of money have been expended, under the direction of Mr. Jonathan Kittow.

GAS.—I was glad to find in a recent number, attention again called to the importance of increasing the consumption of gas, and think the suggestions of "Another Englishman" of great value. I would add another, viz. that the builders of new houses should insert the necessary pipes before plastering, &c. as the work could then be better done, and no injury would arise from introducing gas afterwards, as the fittings and meter would merely have to be attached to the pipes. I have no doubt this provision would be appreciated by the tenants. I know of eight houses in which such provision was made by the builder: they all let readily, and seven of them are already supplied with gas, and the eighth doubtless soon will be.—GASLIGHT.

SWING DOORS.—Mr. R. Watson Savage has specified his patent for "Improvements in Single and Double Action Swing Doors." Close to the edge of the door, nearest to its turning point, and secured underneath the same, so as to allow the door to travel on it, says the inventor, I have an incline plane, or wedge-piece, the surface whereof must be such as to compass the course taken by the opening, shutting, or swinging of the door, and which incline plane, or wedge-piece, must be secured in such position underneath the door that the curve might be described thereon, and so that the door on being opened shall press first upon the lower part of the thin end of the inclined plane, or wedge, and then travel to the highest, or thick part thereof. In all cases the door should be provided with rollers to travel over the surface of the incline.

SANITARY REFORM.—As an old subscriber as well as an old sanitary reformer, I trust you will continue your efforts in showing up the old rotten system. The sanitary reformer is as much required in public establishments as in private,—in the villages as well as in cities and towns. Why not every union in the country have an inspector of nuisances? I could name two important towns where I have, with your assistance, helped to upset the old cesspool plan, but not without some little trouble and loss of caste.

L. V.

LIVERPOOL ARCHITECTURAL SOCIETY.—On December 26th, the society held a sessional meeting in the Royal Institution. The secretary read a letter addressed to the president by the operative bricklayers of Liverpool, who complained that at the last meeting the president charged them with uniting for the purpose of opposing the masters, and pointing out that their union was not for any such object, but rather for purposes of a benevolent nature. The chairman, Mr. Hay, said that he never thought of charging the Liverpool operatives with such an object. What he did say was, that the Manchester hodmen had struck, but that he had to congratulate this society that such a state of things did not exist in Liverpool. The secretary read a letter from Mr. Goodman, the secretary to the London Architectural Society, urging upon this society the consideration of the propriety of memorializing the president and council of the Royal Institute of British Architects to organize an examination, or to grant a diploma, so that the real qualifications of the architects should be brought before the public. The chairman said he should be very happy, along with the other members of this society, to memorialize the Institute of British Architects for the purpose of bringing out some scheme that would be satisfactory to all parties. The subject was postponed until the next meeting of the society. Mr. Horner exhibited a small portion of Roman concrete found at the head of Windermere. Mr. Howard then read a paper "On the Application of Colour to Classical Architecture."

WEIGHTMAN AND CO. *v.* LEWIS. — We have received a communication from Mr. T. H. Wyatt, with respect to the part he played in the above matter; but inasmuch as not the slightest imputation was thrown on Mr. Wyatt at the trial, or conveyed in our notice, we do not think it necessary to insert it. The whole blame rests with the committee. Mr. Wyatt acted as any other honourable architect would have acted in his place. In the notice, instead of the plans were "returned," we should have said the plans were *retained*.

LECTURE ON CROMLECHS.—At the Bristol Philosophical Institution, on Monday evening before last, a local antiquary, Mr. G. Pryce, delivered a lecture on "Cromlechs." The lecturer made the stones at Druid's Stoke, near Bristol (which he regarded as Cromlech remains), the groundwork of his observations, and remarked that such structures might be regarded as partaking of the characteristics of an altar, a sepulchre, and a memorial. He also instanced such of these erections as, from their peculiar positions and other circumstances, seemed to render it impossible they could ever have been covered with mounds of earth.

WALSALL SCHOOL OF ART.—A public exhibition of the elementary drawings of the students of this institution was held on Thursday and Friday of last week. A good number of persons attended. On the Thursday evening the master of the school, Mr. Smith, delivered a lecture on "the Utility of Practical Art," the mayor in the chair. The lecture was well attended. Mr. Smith divided his lecture into two parts—the means by which a knowledge of drawing may be obtained, and the results to be derived from its possession. The chairman, after the lecture, presented the rewards. The mayor said he would give a prize next year.

ARCHITECTURAL SOCIETY OF THE ARCHDEACONRY OF NORTHAMPTON.—A committee meeting was held on Monday, December 10. The plans for Winwick Church were re-discussed, and the raising the walls of the nave much deprecated. In conformity with a request from the Northamptonshire Educational Society, a sub-committee was appointed to co-operate with the sub-committee of that society, in respect to the site and plans for the training-school to be established at Peterborough. A sub-committee was also formed to communicate with the London and Diocesan Church Building Societies, on the expediency of giving their grants to new churches with respect to the amount of area rather than to the number of sittings.

BELLS.—In "Seymour's Survey of London," 1735, I find the following peals given. Can you or any of your readers tell what has become of them?—St. James's, Westminster, six; St. Peter le Poor, Broad-street, five; All Hallows, London-wall, five; St. Martin Outwich, five; St. Katharine, four; St. Alphage, six; St. Mary's, Newington-butts, six; St. Thomas's, in the Borough, five. From the same book it appears that most of our present peals of eight were then peals of six: the addition has, I believe, been almost universally made by the increase of trebles, which accounts for the lightness of so many tenors in modern peals of eight. A peal of five has lately been placed in St. Paul's Church, Brighton, with a tenor of 42 cwt. What a contrast to the peal of six iron-sounding bells just hung in St. Luke's Church, Nutford-place, Edgeware-road; tenor, 8½ cwt.!

JOHN H. SPERLING.

BRICK MACHINE-MAKING UNDER DIFFICULTIES.—There is an amusing account of a difficulty as to the formation of bricks in Java under the Dutch Government, in Watson's *East Indian Archipelago*. The official in perplexity on this account was a grandson of Marshal Daendels, a general so savage and destructive, that Napoleon declared, that if he had two Daendels, he must unavoidably hang one of them, not reflecting, doubtless, that even one Daendel might be one too many, and had better be hung. Old Daendel's mode of making a brick-machine would have been to order it to be done, with the proviso, harder than Pharaoh's on the Jews, that if it wern't, the guilty official who failed to do so should be forthwith shot. Daendel's grandson, however, seems to have had neither the will nor the power to act like his great ancestor. He caught a hint of the existence of a scientific American in prison on the island; and having heard that the Americans, somehow, made no end of bricks by "turning a crank," as they made pigs into sausages, Young Daendel got himself introduced to the "scientific American," who really did think he had seen some such article as that indicated, and perhaps he could make one,—he didn't know till he tried, like Paddy, when asked if he played the fiddle. He "could not but try." So he set to work. He knew that the clay went in somehow in the lump, and came out a never-ending series of bricks. Necessity is the mother of invention. The American had great promises made him, and had high hopes, although he feared the bricks, when made, might only go to strengthen the walls of his prison. For a time he strove in vain, but at length it appears, he actually re-invented (if we may say so) a complete and practicable brick-machine, with copper, endless chain of moulds, and every thing complete; and although it was long ere the promises held out to him were fulfilled, the brick-machine did at length good service to the prisoner of Weltevredin.

VALUE OF HOUSE PROPERTY IN LONDON.—The lease, for an unexpired term of seventeen and a half years, at a nominal rent of 1d. a year, free from rates, taxes, or insurance, of a small one-floor warehouse and counting-house, in the rear of 36, King William-street, Upper Thames-street, estimated to produce a rental of 30*l.* per annum, and determinable, at the option of the lessor, at the expiration of the term of fourteen years, was sold by Mr. T. S. Smith, at the Mart, on December 20, for 430*l.*

THE THAMES TUNNEL.—In the week ending 29th December, 25,436 passengers passed through, and paid in tolls 105*l.* 19s. 8d.

NEW TUNNEL ON BIRMINGHAM CANAL NAVIGATIONS.—The turning of the first sod of the proposed Netherton tunnel was effected on Friday in last week, at Oakham, near Dudley. The tunnel is to run under the Rowley Hills. It is proposed to branch a new canal from the Birmingham level at Dudley Port; its termination being at Windmill-End or Darby Hand. Its length will be two miles and a half, and the length of the tunnel will be 2,567 yards. The dimensions will be sufficiently large to allow of the passage at one time of two boats, one in either direction, and the old practice of "legging" will be obviated by a towing-path on each side. The total cost of the undertaking is estimated at 180,000*l.*

LIGHTING CALCUTTA BY GAS.—We understand that the works of the Oriental Gas Company, in Calcutta, are making good progress, and the loss of materials, occasioned by the wreck of the *Dream*, has been promptly made up by consignments in other vessels.

SHOCKING ACCIDENT AT SMELTING WORKS.—At a pig-iron smelting manufactory, on Monday week, while the furnaces were in full operation, and in one of them were about five tons of fused material, without the slightest previous warning, the red-hot contents of the furnace were ejected about the place to a distance of some thirty yards, with a report as of a small cannon. Four men were fearfully burnt, and shortly after died, and the engineer only saved his life by plunging into a tank of water before his clothes were burnt off him. The accident is said to have arisen from a sudden escape of water into the furnace from the "tweer," a hollow iron vessel by which the blast-pipe is protected from the burning influence of the furnace.

METROPOLITAN CHURCH-BUILDING.—A new and grand church-building effort is announced as having been taken in hand mainly by Lord Robert Grosvenor, as the chief promoter of the subscriptions, which have already made the following splendid commencement:—The Crown, 10,000*l.*; the Duke of Bedford, 10,000*l.*; the Marquis of Westminster, 10,000*l.* It is proposed to realize no less a sum than 500,000*l.* in this way; and in pursuance of the plan it is anticipated that many other large proprietors, such as Lords Portman, Caltborpe, Camden, Radnor, Harewood, Fitzhardinge, Exeter, and almost innumerable wealthy commoners, will follow the munificent example thus set before them.

NEW MURAL MONUMENT IN YORK CATHEDRAL.—A mural monument, of classical design, has been placed in the south aisle of the choir, in memory of the officers and privates of the 51st Foot, who fell a Burmah during the war of 1852-3. The monument consists of a full-length figure of an officer of the regiment. At the feet is laid a full-dress cap of an officer of the 51st. In the background is a representation of a broken column entwined with evergreens, an Indian pagoda and palm-trees, and at the side of the figure is inscribed a motto. At the base of the monument is a tablet recording names. The whole is of Parian marble, executed by Mr. Richardson, of London.

ARMY WORKS CORPS.—On Wednesday 500 artisans, handicraftsmen, and navvies embarked with their officers on board the *Jura* steam transport, in order to proceed at an early hour yesterday direct to the Crimea. They form a portion of Sir Joseph Paxton's Army Works Corps, and have been organized by him as a special body always available for the service of the Commissariat, hitherto very expensively and ineffectually performed by Croats and other labourers hired in the East.

"EXAMPLES OF ANCIENT DOMESTIC ARCHITECTURE."—Under this title Mr. F. T. Dollman is preparing a work, illustrating the hospitals, bede houses, schools, and alms-houses, of the Middle Ages in England. It is intended to be an accurate record of a class of mediæval buildings fast hastening to decay, remarkable for their beauty, interest, and suitableness. The publication will consist of forty plates, embracing plans, elevations, sections, details and perspective views of interesting examples remaining, from drawings and measurements taken on the spot, and drawn as nearly as possible to one uniform scale.

THE SUBSTITUTION OF A PATENT HAMMER FOR HAND-LABOUR AT BIRMINGHAM.—In allusion to an advertisement in its columns as to a new patent hammer, the *Birmingham Journal* gives an account of the circumstances under which it was introduced into Birmingham. Soon after the present war commenced, great complaints were made of the backwardness of the Birmingham small-arm makers. The workmen were very unruly, and Mr. Lawrence, one of the advertising firm, acting on a hint from Sir Thomas Hastings, of the Board of Ordnance, the Birmingham was very slow in introducing improvements, or bringing machinery into use in place of hand-labour, visited Bolton and Manchester, to endeavour to find some machine to supersede the necessity of hand-labour in forging bayonets. He found several (Ryder's patent amongst others) that would forge the bayonet out of the rough steel, but not one that would put the grooves or flutings into the bayonet simultaneously. He returned home, and a friend happening to know his want, showed him a notice of the new hammer, then just patented. Mr. Lawrence went to Heeley, and the inventor undertook to make him a hammer that would do the work. The hammer is now working, and Mr. Lawrence has not a single hand-forger on his premises.

LICENSED TO COPY. — The architects of this country are, we perceive by the *Builder*, agitating the question of a diploma, in order that the public may recognise the "regular-bred" men from the interloper. We have noticed the discussion with much interest, but it appears to us the notion arises more from the self-idea of extra-gentility attached to the thing, than from any real call for it from "my masters" the public. If the official stamp is only wanted to the license to copy to which English architecture mostly aspires, then we say withhold it, and let the title of architect be open to all; for certain it is, we have more to thank the general public than the regular-bred architects, for any progressive movements of improvement in architecture during the past century. The servile spirit of copy and the incongruous admixture of styles, are detected and deplored by the public, and any man who departs from this copyism, and really constructs a building fit for the purpose for which it is wanted, and with an external expression in accordance with its use, is sure to receive the best diploma, viz. the public approval.—*Bridgewater Times.*

DIMENSIONS OF PUBLIC ROOMS IN MANCHESTER.—The following are the dimensions of the principal public rooms, &c. in Manchester, and the numbers of persons they will seat: where standing room only is required about twice the number of people may be accommodated:—

Name.	Length. Feet.	Brdth Feet.	Area in Sqre.yds.	Persons
Royal Exchange	185	92	1,628	3,000
New Free Trade Hall	134	78	1,161	2,300
Assembly Room	75	37	308	500
Theatre Royal	120	55	800	3,000
Corn Exchange	—	—	600	1,200
New Mechanics' Institution	76½	40	340	600
Manchester Town Hall	85½	32½	260	600
Salford Town Hall	—	—	242	500
Hayward's Hotel Room	64	28	184	350
Chorlton Town Hall	60	23	127	250

—*Manchester Courier.*

LECTURES ON GREEK ART.—Professor Overbeck, says the Dresden correspondent of the *Literary Gazette*, has commenced at Leipzig a course of most interesting lectures on Greek plastic art. He tried in his opening lecture to impress upon his hearers, that the art of sculpture was the earliest and truest expression of the Greek mind, and at the same time a language the most universal and most easy of comprehension: he urged upon his audience the necessity of the study and frequent contemplation of Greek works of art, in order to develope and cultivate the sense of the beautiful. In the historical part of his lecture, he maintained that Grecian art had not been transplanted from any other soil, but had sprung up in the country itself; and that its golden age had lasted only from the time of Phidias to that of Alexander, and that under the Macedonian rule it degenerated into the mere flattery of princes and manufacture of images; Athens alone having erected no less than 300 monuments in honour of one ruler.

NOTICE.

FROM and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *vid* France, must be prepaid: the stamped copy of the paper is of no avail.

TO CORRESPONDENTS.

"D. W. R."—"N. L."—"M. H. F."—"W. F."—"R. R."—"T. H."—"Subscriber," Cornwall (the sum named, 25*l.* would be a very moderate charge).—"H. B. K."—"Mr. H."—"J. M."—"W. S." (our journal is scarcely the right medium of communication).—"W. C."—"Fair Play."—"H. C."—"T. G. K."—"S. H."—"T. P."—"J. B."—"E. W. T."—"J. L."—"B. A. C. H."—"W. S."—"Brother Archæologist."—"Lady B."—"T. H."—"J. G. G."—"M. E. H."

"Books and Addresses."—We are forced to decline pointing out books or finding addresses.

NOTICE TO SUBSCRIBERS.—A title-page in colours for the last volume may be obtained *gratis*, on personal application at the Office, by those who prefer it to that which accompanied the index in the closing number. Covers for the volume may be obtained: at the Office, price 2*s.* 6*d.* or the publisher will bind it for 3*s.* 6*d.* The complete volume may be obtained, price 21*s.*

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO GAS COMPANIES and OTHERS.—R. LAIDLAW and SON, Gas Engineers and Founders, Edinburgh and Glasgow, respectfully intimate that on and after the 1st January they will be REPRESENTED in LONDON by Mr. ROBERT DAVISON, Member of the Institution of Civil Engineers, who will be happy to attend to all local and foreign business.—R. L. and Son manufacture, on a very extensive scale, Gas Apparatus of every description, viz. Cast-iron Retorts, Hydraulic Mains, Condensers, Scrubbers, Purifiers, Hydraulic and Improved Slide-Valves, Station Meters (of superior designs), from the smallest size to 12-feet square, Governors, Governors, Pressure Indicators, Cast-iron Pipes, Wrought-iron and Block-tin Tubes, Lamp-posts in great variety, Consumers' Meters, and every other article required in the manufacture and distribution of gas. Country mansions fitted up with gas apparatus in a superior manner.—Offices, 8, London-street, City.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.
A GENTLEMAN, aged 33, is desirous for an ENGAGEMENT. Has had considerable experience in preparing working and finished drawings, estimating, measuring, superintending, and valuing works, and the routine generally.—Apply by letter, A. Z. Mr. Hyatt's, 6, Hand-court, Holborn.

TO TRADESMEN.
A BOOKKEEPER, having two days a week unoccupied, wishes for EMPLOYMENT.—Address J. N. Mr. Wm. Tate's, 5, Warnford-court, City.

TO ARCHITECTS.
A NEAT and expeditious DRAUGHTSMAN desires a RE-ENGAGEMENT in town; accustomed to the getting out of perspective, finished, working, and detail drawings, &c. and the general routine of an Office. Salary moderate.—Address, A. B. No. 9, Elizabeth-street South, Pimlico.

TO BUILDERS.
AS SHOP or GENERAL FOREMAN.—An experienced practical Man is open to a RE-ENGAGEMENT, either in town or country. Satisfactory testimonials as to ability, sobriety, &c. can be given.—Address, Y. Z 4, Cat non-street, New North-road, Islington.

TO ARCHITECTS.
A SURVEYOR, of extensive practical experience in taking off quantities and measuring up works, would be glad to enter into an arrangement with an architect for the same. References given to architects for whom the advertiser has done business.—Address, R. H. Office of "The Builder."

TO CIVIL ENGINEERS, SURVEYORS, &c. &c.
A YOUNG PERSON of education, and first-class abilities in Engineering, Surveying, Levelling, &c. &c especially in Railway Engineering, is desirous of a RE-ENGAGEMENT in London, or any provincial town (he would not object to proceed on the Continent or to the Colonies). The advertiser being a practical person, he could render efficient active assistance to any gentleman requiring such. Terms strictly moderate. The best references given.—Address, C. Engineer, 14, Windmill-street, Finsbury-square.
N.B.—A good draughtsman and accountant.

TO CONTRACTORS, BUILDERS, AND OTHERS.
A PERSON, experienced in estimating, keeping books, and who writes a good and expeditious hand, is desirous of entering into an arrangement for the whole or part of the week. Is conversant with railway works.—Address (prepaid), T. W. to the care of Mr. Goddard, 13, Hemming's-row, Charing-cross.

A YOUNG GENTLEMAN, 22 years of age, who has been Drawing Master in a Public School, writes a good hand, and can make mechanical drawings or tracings, is anxious to get EMPLOYMENT in the Office of an Architect or Builder. As his object is to learn the profession, he requires no remuneration besides board and lodging.—References and specimens sent on application to W. L. B. 3, Union-street, New-road, Chatham.

TO MASTER PAINTERS AND BUILDERS.
A YOUNG MAN wants EMPLOYMENT as GRAINER, to fill up time with Painting and Paper-hanging. No objection to the country.—Address, R. MAY, 18, Newnham street, Edgeware road.

TO BUILDERS AND PLUMBERS.
A YOUNG MAN wants a PLACE as PLUMBER. No objection to assist in the painting and glazing, if required.—Apply to C. C. 16, Hanover-place, Oxford-street.

A YOUNG MAN is desirous of a RE-ENGAGEMENT in a Builder's Office, who has filled a similar situation with London Builders for seven years. References unexceptionable.—Address, R. R. 47, Essex street, Strand.

TO BUILDERS AND OTHERS.
A PRACTICAL SURVEYOR offers his ASSISTANCE in measuring, estimating, or the making up of builders' accounts. Terms moderate and per agreement.—Address, X. Y. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, &c.
AN Architectural Draughtsman, accustomed to prepare finished, working, and detail drawings, measure artificers' work, and take out quantities, &c. is desirous of a RE-ENGAGEMENT. Salary moderate. Good testimonials.—Address, A. B. 3, Harvey square, Folkestone.

TO WINDOW-GLASS AND LEAD MERCHANTS.
A FIRST-RATE CUTTER is in want of a RE-ENGAGEMENT, to superintend a Glass and Lead Warehouse; one who thoroughly understands the business, and all the office routine. Can have satisfactory testimonials as to character and ability.—Address, S. C. 4, Brook's-gardens, Bagnigge-wells-road, London.

AN ARCHITECT'S ASSISTANT is desirous of a RE-ENGAGEMENT. Terms moderate.—Address, T. Q. London Advertisement Hall, Hungerford-market.

A THOROUGH Practical Carpenter and Joiner, well versed in Gothic details, is a good draught man, and having completed an engagement on a public building, wishes for an ENGAGEMENT as CLERK of WORKS, or general or shop Foreman, in town or country.—Address, ZETA, 41, Robert-street, Hoxton.
N.B.—Unexceptionable testimonials from late employers.

A FIRST-RATE ARCHITECTURAL DRAUGHTSMAN, DESIGNER, and SURVEYOR, would be glad to meet with a gentleman requiring efficient professional assistance; the advertiser is thoroughly conversant in all matters of construction and detail, either in wood, iron, or stone; is a clever artist, and decorator in ornament and colour; an expert leveller, and surveyor of land and buildings; has also a considerable knowledge of engineering, drainage, road-making, &c. and taking off quantities.—Address, LENNOX, Office of "The Builder."

TO SURVEYORS AND BUILDERS' CLERKS.
AN experienced CLERK is required in the office of a Builder in London. None need apply who are not well acquainted with accounts, and accustomed to take out quantities, make estimates, and measure up extra works.—Address, Z. Y. Office of "The Builder."

TO BUILDERS.
A YOUNG MAN, who has served his time to an Architect in the City, and had some practice in other offices, is desirous of an ENGAGEMENT in a first-rate Builder's office. Salary moderate.—Address, A. D. 7, Guildford-road, Greenwich.

TO BUILDERS.
A YOUNG MAN, aged 20, wishes to article himself for two years as IMPROVER at the BENCH.—Address, J. B. D. No. 19, Wilson-street, Gray's-inn-road.

TO CONTRACTORS, BUILDERS, &c.
A PRACTICAL MASON, well acquainted with the principle and detail of the best style of building, and a good draughtsman, will shortly be at LIBERTY. Age, 29.—Address, R. RADIUS, Post-office, Brentwood, near London.

TO SURVEYORS AND ARCHITECTS.
WANTED, a SITUATION for a Youth, aged 15. His abilities for drawing, tracing, and working out dimensions would render him an acquisition as junior clerk or assistant to either of the above professions, or in a merchant's counting-house; writes a good hand, quick at accounts, and knows town well.—Address, post paid, E. G. C. at Burnett's Library, Camberwell-gate.

WANTED, by an experienced Joiner, a SITUATION as WORKING, SHOP, or OUT-DOOR FOREMAN, having filled similar situations for London builders for the past ten years, and can produce satisfactory testimonials as to ability, &c.—Address, J. U. 12, Douglas-street, Deptford.

TO BUILDERS.
WANTED, by a Practical Surveyor and Draughtsman, of considerable experience in measuring, estimating, pricing bills, quantities (having a thorough knowledge of prime cost prices), drawing, &c. Would be glad to undertake any business for builders, upon strictly moderate terms. Being a first-rate accountant, would undertake the adjustment of books and make out accounts.—Address, F. R. S. Post-office, Mount-street, Lambeth.

TO BUILDERS, &c.
WANTED, by a Young Man, aged 24, a SITUATION as CLERK, being thoroughly acquainted with the routine of the office and yard, a good draughtsman, accustomed to measure work from the bench, &c.; superintend work (if necessary) and bookkeeping. Good references.—Address, T. B. 24, Praed-street, Paddington.

TO BUILDERS, &c.
WANTED, a SITUATION, as CLERK or TIMEKEEPER, by a Young Man aged 22, who has been three years in his last situation. Is well acquainted with the Glass Trade.—Apply to W. A. C. Library, Upper Norwood.

TO BUILDERS' FOREMEN AND BUILDERS.
WANTED, a SITUATION, by a respectable Young Man of 20, where he would have good opportunities of IMPROVING himself as a Carpenter, or in his knowledge of the trade generally. Is acquainted with the routine of an office, and has assisted in superintending works. Country preferred. This will be made "to the advantage" of any foreman.—Address, BETA, Post-office, Edmonton.

TO ARCHITECTS, ENGINEERS, SURVEYORS, BUILDERS, &c.
WANTED, by the Advertiser, aged 24, an ENGAGEMENT in either of the above offices; has been accustomed to superintend works, can make fair and working drawings, prepare specifications, and is practically acquainted with construction generally. Is by trade a joiner. No objection to act as clerk of works, if required.—Address, J. S. L. care of Mr. GEORGE GREEN, Cumberland-place, Newington-butts.

TO ENGINEERS.
WANTED, by the Advertiser, aged 21, a Situation as Improver. Can be well recommended by his last employer.—Address, J. Y. Z. 165, Aldersgate-street.

TO PAINTERS AND OTHERS.
WANTED, by the Advertiser, a SITUATION as JOURNEYMAN. Understands house-painting, glazing, and paper-hanging, and is a thorough good grainer. Specimens of every wood on hand. Wages little consideration where the engagement is permanent. Address, R. W. S. 26, Raven-street, Whitechapel.

TO ARCHITECTS AND BUILDERS.
WANTED, a SITUATION as CLERK of WORKS, SHOP or GENERAL FOREMAN, by a Man aged 40. Having fulfilled the above some years, can be well recommended by the gentlemen he has served.—Address, G. H. 16, William-street, Waterloo-road.

TO BUILDERS AND MASONS.
WANTED, by the Advertiser, a RE-ENGAGEMENT as CLERK, in either of the above businesses. Is thoroughly acquainted with all the office routine, a first-rate practical draughtsman, and can have satisfactory testimonials.—Address, A. B. care of Mr. Chance, 3, Lower Queen-street, Lower-road, Islington.

TO CARPENTERS AND BUILDERS.
WANTED, to APPRENTICE, a strong, active Youth, aged 16, to the above trade. He has served two years, and only left in consequence of the bankruptcy of his master. Respectable references given and required.—Address, W. T. at Mr Pratt's, 10 Smithfield-bars

TO BUILDERS, SURVEYORS, AND CIVIL ENGINEERS.
WANTED, by the Advertiser, aged 22, an ENGAGEMENT as JUNIOR ASSISTANT. Is a good draughtsman, and can assist in taking out quantities, preparing working and finished drawings, and the usual routine of an office, and has a knowledge of surveying and levelling. Six years' reference to late employer.—Address, ALPHA, care of Mr. Hill, stationer, Gray's-inn-road.

WANTED, by a Middle-aged Man, a SITUATION as COLLECTOR, TIME-KEEPER, or FOREMAN; is acquainted generally with smiths' work, and can give good references.—Address, W. M. L. Office of "The Builder."

TO PLUMBERS AND BUILDERS.
WANTED, by the Advertiser, a SITUATION as PLUMBER, and would not object to fill up his time painting and glazing, if the place would be permanent. References, if required.—Direct to A. B. at Mr Burnham's, 22, Ashford-street, Pitfield-street, Hoxton.

WANTED, a SITUATION, by a Young Man, aged 23, who served his apprenticeship to a glazier, writer, grainer, &c. in-doors or out. Salary expected, 18*l.* per annum.—Apply to W. P. 17, St. Andrew's-hill, Blackfriars.

SEWERAGE and DRAINAGE WORKS.—The Advertiser, having been engaged for the last three years as Clerk of Works in a large town, and which is now nearly completed, would be glad of a RE-ENGAGEMENT on similar works. Unexceptional testimonials; any references can be given.—Address, G. J. Office of "The Builder."

TO BUILDERS.
THE Advertiser wishes to join an established BUILDER, either at a salary or to take a share of the profits. He has had considerable experience in the erection of buildings of all classes, as well as railway works; has been engaged in architects' and engineers' offices; can make designs and estimate, and understands levelling and surveying; has some knowledge of machinery, and has had the management of extensive works. He would be competent to take an active part in the management of the business, and, having a large connection, would also be able to increase it. The highest references can be given.—Address, C. E. S. at Howe's, Stationer, Cheapside.

TO ARCHITECTS.
THE Advertiser, who has been six years in the profession, is desirous of an ENGAGEMENT in an ARCHITECT'S OFFICE.—Salary nominal.—Address, J. H. 34, Mornington-road, near Regent's-park.

TO ARCHITECTS.—An ASSISTANT who has been nine years in the Profession, and has lately been engaged upon several first rate Buildings, is OPEN to an ENGAGEMENT. He is an excellent Draughtsman, and thoroughly understands detail and construction.—Address, G. G. 39, Michael's-place, Brompton.

TO ARCHITECTS AND SURVEYORS.
THE Advertiser, aged 22, wishes for a SITUATION. He speaks French and a little German. Salary 12 per week.—Address, A. B. 8, Pond-street, Hampstead.

TO ARCHITECTS, &c.
THE Advertiser, who has been four years in an Architect's office, and can produce satisfactory testimonials as to character and ability, is desirous of an ENGAGEMENT.—Address, A. B. 8, Thornhill-crescent, Islington

TOWN-TRAVELLER.—WANTED, an active Person, well acquainted with Builders, &c. to represent an established house.—Applications, stating last employment and salary expected, may be addressed to A. B. Office of "The Builder."

HACKNEY DISTRICT BOARD of WORKS.—A SPECIAL MEETING of this Board will be held at the Town-hall on THURSDAY morning, the 10th JANUARY, inst. at TEN o'clock, for the Election of TWO CLERKS of WORKS to this Board, the salary to be 2*l.* per week each. Applications to be addressed to the Chairman of the Hackney District Board of Works, at the Town-hall, Hackney, and to be delivered on or before TUESDAY evening, the 8th inst. at SEVEN o'clock.—Particulars as to duties, &c. may be obtained at the Town-hall, Hackney.

HACKNEY DISTRICT BOARD of WORKS.—A SPECIAL MEETING of this Board will be held at the Town-hall, on THURSDAY morning, the 10th JANUARY inst. at TEN o'clock, for the ELECTION of a SURVEYOR to the Board. The salary to be 230 per annum. Applications to be addressed to the Chairman of the Hackney District Board of Works, at the Town-hall, Hackney, and to be delivered on or before TUESDAY evening, the 8th inst. at SEVEN o'clock.—Particulars as to duties, &c. may be obtained at the Town-hall, Hackney.

TO JOINERS.
WANTED immediately, good WORKMEN, for working in GOTHIC TRACERY. None but good hands need apply.—Address by letter, pre-paid, to A. B. Post-office, Southampton, stating wages required, and where last employed.

TO BUILDERS' CLERKS.
WANTED, by a London Firm, a respectable Young Man, who is an experienced draughtsman, in the above capacity. Address, stating age, particulars, and salary required, to Z. Z. Office of "The Builder."

WANTED, in a Timber-yard, an active business Man, as WORKING FOREMAN. Must be acquainted with the trade.—Apply, by letter only, to ROBERT WARD and SON, Mahogany and Timber Merchants, 8, Oxford-street.

TO MASONS.

WANTED, an active, clever, and competent MAN, to set out from drawings, execute and fix all kinds of work required in building operations, and who understands cemetery work, cutting letters, &c. and who could occasionally act as Working Foreman. A permanent engagement in the country may be secured on application, by letter, addressed to O.M. care of Mr. A. Goslett, Plate and Crown Glass Warehouse, 26, Soho-square, London.

TO LEAD-LIGHT GLAZIERS.

WANTED, a first-rate WORKMAN, who thoroughly understands tracery and fixing.—Apply to J. LANG, Plumber, 10, Tavistock-place, Tavistock-square.—References required.

PARTNERSHIP.—PREMIUM, 500*l*.—To take an active part in an Auctioneer's Office, long established at the west of London. Those confidentially and fully communicating, will receive a prompt reply.—Address, J. WOODHOUSE, Esq. 7, Bayswater-hill.

PARTNERSHIP.—To Young MEN, of moderate capital and active business habits. A PARTNERSHIP is now OPEN in an old-established first-class London manufacturing business, in which the principal is desirous of some assistance in its duties. Such an opportunity seldom occurs, as the connections are of the very highest class. The goods manufactured are special to the present proprietor and are highly approved, in all cases leading to increase of business, and continuing an established reputation of between twenty and thirty years. To any energetic, persevering young man, having at command capital sufficient to take a third share (for which from 2,000*l.* to 3,000*l.* are required), it would prove most advantageous. It is desirable that any one answering this advertisement should have some practical knowledge of the metal trades, engineering, or mechanical business. Previous to any information being given, the advertiser will require to be satisfied of the respectability and business habits of the party applying. Also that he has the necessary funds at command, when the fullest investigation will be allowed.—Address, W. Z. care of Mr. J. B. Watson, Architect, 9, Nottingham-place, New-road.

TO CARVERS and GILDERS.—TO BE DISPOSED OF, in a fashionable Seaport Town, an old-established BUSINESS in the above Line, owing to the death of the Proprietor.—Apply to Mrs. BARRITT, Lowestoft, Suffolk.

PLUMBERS' MATERIAL, WINDOW-GLASS, and PAPER-HANGING BUSINESS, TO BE SOLD, with or without plumbing and painting business, an established concern, in a leading thoroughfare. May be entered on highly advantageous terms.—Apply to R. C. 164, St. John's-street-road.

ROYAL POLYTECHNIC.—CHRISTMAS HOLIDAYS.—The Second Part of the Voyages of Sin'bad the Sailor, with new and beautiful Dissolving Pictures, and description, with Songs, by Lenox Horne, esq. (Lauchal): Phantasmaroria Effects, by Messrs. Carpenter and Westley.—Series of astonishing Conjuring Tricks and Delusions by Mr. Burnaby.—Brilliant Popular Lectures on Flame, Fire, and Combustion, by J. H. Pepper, esq.—Third Gratuitous Distribution of the Ornaments of the Giant Christmas Tree, on Wednesday, January 9th, at 1 and 7, being the Special Juvenile Morning and Evening of the week, for which great amusements will be provided.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SEPTIMUS PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

IMPROVED CONSTRUCTION, and SMOKY CHIMNEYS PREVENTED.

The Chimney Contractor, with Horizontal Register made of Iron, to be used for the formation at the commencement of Chimney. Made for Flues 9 inches by 9 inches, 14 inches by 9 ditcher, and 14 inches by 14 inches.

The UNIQUE CHIMNEY-POT Multum in Parvo, a Remedy against Smoky Chimneys, unsightly and dangerous Contrivances is inclosed at the top, has a division and double outlet, preserves the flue dry, and will not clog with the soot.

Sold at No. 8, Princes-street, Bedford-row.

By Her Majesty's Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.

Also,

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.

Also,

VENTILATING ROOFLIGHTS, for Slate or Tile Roofing, without Paint or Putty.

Prospectuses sent on application.

London Depôt—ESNOUF and MANGER, 141, Minories, City.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying moulded clays, sound at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE; it has combined, where necessary, the advantage of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, red antique, &c. Portland, Harehill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

Lloyd's Marble Wharf, Thames-bank, Pimlico, Adjoining Vauxhall bridge.

ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

WARM and COLD MARBLE BATHS for SALE. To NOBLEMEN, GENTLEMEN, BUILDERS, and PROPRIETORS of LARGE PUBLIC ESTABLISHMENTS.—TO BE SOLD, by Private Contract, a decided bargain, the WARM and COLD MARBLE BATHS, erected eight years since, adjoining the Tennis-court, Oriel street, Oxford, at an expense of 600*l.* They consist of two baths, of the interior dimensions of 5 feet 8 inches in length, 2 feet 1 inch in width, by 2 feet 4 inches in depth. A third, with steps, is 6 feet in length, with similar width and depth. They are composed of the finest white marble; were erected with every requirement for comfort and convenience; are of the first-rate character, and would form a desirable adjunct to the establishment of any nobleman, gentleman, or proprietor of a first class establishment. The tanks, made by Corfe and Bell, Leicester, contain 1,100 gallons. The force-pump is of the best description, and a considerable quantity of lead piping is attached. The hot water apparatus was furnished by Messrs. Easton and Amos, of London, and is complete in every respect. The baths and apparatus of every description can be removed without the slightest detriment. The baths are to be sold only in consequence of the expiration of the lease of the premises on which they were erected. Application to be made at the Tennis-court, 12, Oriel-street; or to Mr. PHILIP HURCOMB, Accountant, 4, Worcester-terrace, Oxford.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 30, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

TO SCULPTORS, BUILDERS, MASONS, &c.

B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, vein, Sicilian, black and gold, dove, Bardilla, Sienna, and Breccia, in blocks, and particularly calls their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.

Monuments, vases, and statues, finely executed in Italy.
Carrara Wharf, Thames-bank, Pimlico.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Terms, Consoles, &c. executed and delivered at reasonable rates. For further particulars apply at the Offices of the Company, 19, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Blocks and Slabs, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truck-loads of five tons. Paylings, Landings got out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

ARCHITECTURAL EXHIBITION, SUFFOLK-STREET, PALL-MALL EAST.—Architects and Builders are respectfully requested to examine the specimens of BATH and CAEN STONE, inserted by BARRETT'S PATENT PROCESS, now open, No. 47, in the Department for Materials at the above Exhibition.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 345, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beckham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Batt Stone Office, Corsham, Wilts.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.

THE STOCK OF LOW PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

ORIGINAL
ANCASTER STONE.
TO QUARRYMEN.
THE ANCASTER STONE MERCHANT,
MR. JOHN WILSON,
HAS A VACANCY FOR A FOREMAN.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their Stock of Bangor slates, laths, Plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and sheels for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager, JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. COLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

SCAGLIOLA done on an IMPROVED PRINCIPLE.—I refer to the Gothic Arch by D. Dolon in the Great Exhibition of 1851, which gained the only Prize Medal awarded for the manufacture of the above work.—Specimens to be seen at 192, Drury-lane, two doors from Holborn, superior to any yet offered to the public, with a choice Collection of Ornaments for building purposes, Trusses for Shop-fronts, &c. &c.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1852. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the top of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stands, hall-tables, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 38, and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, Royal Asylums, Pauper Lunatic Asylums, Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

AUSTIN'S ARTIFICIAL STONE.—This material, frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000*l.* and 5,000*l.* In contradistinction from Terra-cotta, and all other kind of Pottery, there is no discoloration of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof.—AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.
*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED.
WILCOX & CO.
FLINT MILLS, MILLWALL, POPLAR.

BARRETT'S PATENT INJECTED STONE COMPANY.—PAVINGS, BLACK and WHITE Plain and Ornamental Pavings may now be had in this material, which is hard as marble and impervious to moisture, as cheap as Portland stone. Specimens at the price to be found so suitable for halls, basements, terraces, &c.—Full particulars on application, by letter or otherwise, to the Manager, Mr. CHAMBERLAIN, at the Works, 80, Bridge-place, Harrow-road, Paddington.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING and INODOROUS FELT, For Damp Walls, and Lining Iron Houses, 2, DOWGATE-HILL, LONDON.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

BRICKS.—200,000 STOCK BRICKS, delivered into trucks at Wimbledon Railway Station, at 22*s.* per thousand. Place Bricks, at 30*s.*—Apply to J. D. 9, Townwall street, Dover.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plain description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 52*s.* 6*d.* per 1,000; floor bricks and 6 inch pavings, at 30*s.* 6*d.* per 1,000; 8-inch pavings, at 57*s.* 6*d.* per 1,000; plain tiles, at 35*s.* per 1,000, delivered. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield street North, City-road Basin. Secondly, that the term Terro-Metallic, is the exclusive right of the Proprietor; and, thirdly, that the "REPORT OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known as the "Tile Pilleries," in Tamworth, Staffordshire as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability. Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painter's colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied or shipment, on advantageous terms.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL,—Light and Dark, equal to any made Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Porzolano.

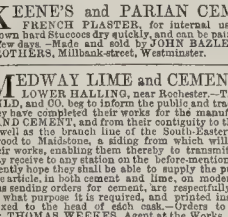
NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to MR. THOMAS WEEKES, Agent at the Works.



Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Plastic Cements, English and French Plaster, &c.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being exavated in its pure and unadulterated state, from quarries on their own property. The company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. RIALLMARK, 80, Old Broad-street, City.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

REID, HEINEKEY, AND CO.

PORTLAND AND ROMAN CEMENT MANUFACTURERS,

EAST GREENWICH,

KENT.

SHIPPING ORDERS PROMPTLY EXECUTED.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'s BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

PORTLAND CEMENT.

CHARLES RICHARDSON,

6, SOUTH WHARF, PADDINGTON.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,

6, SOUTH WHARF, PADDINGTON.

BATH CEMENT.

CHARLES RICHARDSON,

6, SOUTH WHARF, PADDINGTON.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON,

BRICK, LIME, and CEMENT MERCHANTS.

SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Materials.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which, for the last two years has been extensively used at most of the large works constructed during that period or known Lump and Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the EREC-TION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, C. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 25s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Pooke, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet-pans, Furnace-blocks, Fire-bricks, Flue-pots, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles, at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

London Agent: J. COX, 2 and 3, High street, Lambeth.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

AN established BRICKFIELD TO LET, at Shepherd's Bush.—Apply on the Spot, to Mr. ROBINSON, No 1, Oakland Villa.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

STEAM PRESSURE GUAGES.

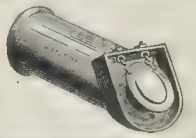
The most approved and suitable Instrument for Colliery, Railway, and other Boilers, is

WEBSTER'S PATENT,

MANUFACTURED ONLY BY GRAY AND BAILEY,

BIRMINGHAM,

From whom the fullest information may be obtained.



Orders from Collieries should be given without delay, as the new law in respect to Coal-mines comes into operation the 31st December instant.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET,

DRAWING AND LIST OF PRICES FORWARDED FREE ON APPLICATION

"Terra-cotta" Chimney-pots of various patterns and sizes, also Red Earthenware Drain pipes, at greatly reduced prices. (1179)

TO WATER COMPANIES AND PLUMBERS.

BURDEN'S PATENT HIGH-PRESSURE

COCKS.—These cocks are remarkably simple in their construction, very durable, especially liable to get out of repair, and have been most severely tried, and for a period of three years, under a continuous head pressure, varying from 300 to 400 feet.

SAMUEL SHEPPARD, Sole Manufacturer.

JAMES STREET, ST. PAUL'S, BIRMINGHAM.

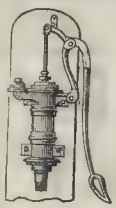
STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile driving, grinding materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,

Engineers and Contractors,



John's-place, Holland-street, Southwark, London.

ENGINES.—For SALE, THREE 12-horse

high-pressure horizontal ENGINES, admirably suited for winding; 12-inch cylinders, metallic pistons, either with or without boiler. Also two powerful double-purchase CRABS, capable of lifting 30 tons each. Also a wrought-iron TANK, 20 feet by 4 feet, by 4 feet, 8 plates.—Apply, by letter, to No. 20, BOX, Post-office, Derby.

PUMPING MACHINERY. — Lifting and

Forcing Pumps, Patent Centrifugal and Double-acting Hydraulic Pumps, deep Well Pumps, Steam-Engines portable and fixed, Hydraulic Rams, Water-Wheels, and every description of machinery, of the most improved construction, manufactured and supplied by GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex-wharf, Strand, London.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and pulleys are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Deep and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,

8, Crescent, Jewin-street, London,

Manufacturers and Patentees.

PORTABLE STEAM-ENGINE. — A new

8-horse PORTABLE STEAM-ENGINE, with tubular boiler, for SALE. Can be seen at work at Mr. GOODWIN'S, 67, Great Guildford-street, Southwark, of whom particulars may be obtained.

PUMPING and WINDING ENGINE.—

TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10 horse power, by Medwin and Hall, with a pair of 9-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 99, Blackfriars-road.

PORTABLE STEAM-ENGINES and

PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

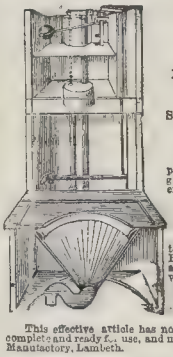
Pan, 3s. 6d.



Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

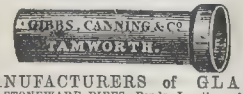
PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE, powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 29, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.
N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

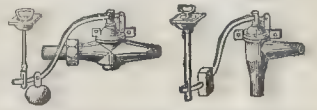
TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES



FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.



3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks (as used by her Majesty's Commissioners of Sewers), White Fire Clay, Facing Bricks, &c., &c. Agents,—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 120 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.
N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 1os. 6d. each.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 83, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of TWINE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

May be viewed the day previous. Catalogues had at the Architect's Office, Guildhall; and of PULLEN and SON, 26, Fore-street, Cripplegate.

FARRINGDON-STREET EXTENSION.—BUILDING MATERIALS OF TWENTY HOUSES

PULLEN and SON have the honour to announce that they will SELL by AUCTION, on the PREMISES, on MONDAY, JANUARY 14, at TWELVE, in Lots, by order of the Improvement Committee of the Corporation of the city of London, all the valuable BUILDING MATERIALS of about twenty houses in Bowling-street and Turrimill-street, Clerkenwell, including the Horse and Groom public house, built within a few years; comprising about 400,000 good, sound bricks, plain and pan tiles and slates, capital oak and fir timber in roofs and floors, sashes, doors, partitions, floor-boards, shop-fronts, lead gutters and pipes, stone-paving, stoves, coppers, and useful fixtures and fittings to the above.—May be viewed on SATURDAY, and catalogues had at the Architect's Office, Guildhall; and of PULLEN and SON, 26, Fore-street, Cripplegate.

BUILDING MATERIALS, OLD-CHANGE, ST. PAUL'S.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on THURSDAY, JANUARY 17, at TWELVE, in Lots, all the valuable BUILDING MATERIALS of the dwelling houses, stabling, cart-sheds, and extensive premises, Nos. 9 and 10, Old-change, St. Paul's, comprising good sound brickwork, lead gutters and pipes, plain and pan tiles, stout boarded and timber floors and roofs, sashes, doors, and interior fittings, shop front, large entrance-gates, pebble and clinker paving, and stable fittings, and useful fittings-up. May be viewed the day previous.—Catalogues had at the Architect's Office, Guildhall; and of PULLEN and SON, 26, Fore-street, Cripplegate.

TO BE SOLD, by PUBLIC AUCTION, on the 2nd FEBRUARY next, a large assortment of ITALIAN and other MARBLE SLABS, of large sizes, and English sawing. Approved bills will be taken in payment. Further particulars will be advertised.

42, UNION-STREET, SOMERS-TOWN.

MR. LEREW will SELL by AUCTION, on the PREMISES, as above, on MONDAY, the 14th of JANUARY, at TWELVE for ONE o'clock, 1,500 YELLOW, WHITE, and PINE PLANKS, DEALS, and BATTENS, 300 squares of yellow and white batten flooring, 3,000 feet quartering, 4,000 feet wide pine board, dry cut stuff, 70 four-panel and sash doors, and 20 new deal cased frames, with sashes, linings, ironmongery, jib-crane and windlass, scaffolding, ladders, barrows, &c. May be viewed the Saturday prior and morning of Sale; and catalogues had, on the Premises; and at the Auction Offices, Cardington-street, Hampstead-road.

IN CHANCERY.—"Gough *v.* Hunting," "Hunting *v.* Gough."

To Pianoforte and Cabinetmakers, Proprietors of Saw-mills, and Others.—The valuable Patent Right for Cutting in lieu of sawing Veneers, whereby fully double the number of Veneers of an equal thickness are obtained from the Log than are obtained from the use of the Saw; together with all the Patent Machinery, Steam engine, Boiler, &c. for making the same, as also the Lease of the Premises &c

MESSRS. PRICE and CLARK will SELL by AUCTION, on the PREMISES, known as the Canalbridge Wharf, in the Kingsland-road, London, on THURSDAY, FEBRUARY 7, at TWELVE for ONE, by order of the Right Hon. the Master of the Rolls, the QUEEN'S ROYAL LETTERS PATENT, granted to William Gough, Engineer and Draftsman, for "IMPROVEMENTS in the MANUFACTURE of VENEERS and in Machinery and Apparatus connected therewith," dated 26th October, 1853, being one of the most ingenious and important inventions of modern times, alike valuable for its vast economy of material and production as for the facility and rapidity of its operation, whereby, varying at choice, from eighteen to thirty-two veneers of any length and of any description of wood can be produced from the inch thickness of log, instead of only one-half the number as now produced by any saw-mills, in less than one-fourth of the time, and at considerably less cost: together with the patent cutting machine, recently erected at a very large expense, and an 18-horse power steam-engine and boiler, with all the gear for working same and connected therewith; also the lease of the very commanding premises, comprising a timber-yard, engine-room, engine-house and warehouses, counting-house, and a capital dwelling-house, which is held for a long term at a moderate rental. At the same time will be sold a valuable quantity of knife-cut veneers, a dog-cart and harness, and sundry effects.—The whole may be viewed fourteen days prior to the sale, and particulars had of Mr. SIDNEY D. HAMILTON, Solicitor, 30, King's road, Bedford-row; of Messrs. THINDEN and EVRE, Solicitors, 1, John-street, Bedford-row; of Messrs. KNIGHT and DUNN, Solicitors, Newcastle-under-Lyne; at the Place of Sale; and of Messrs. PRICE and CLARK, Auctioneers, 48, Chancery-lane, London

BUILDING LAND TO BE LET, in the Hich-street, Peckham; Belmont-grove).—Ground for fourteen houses, 16 feet frontages; brick walls all round, and all the drains and roads made. Direct from the freeholder.—Apply on the premises; or to H. W. RAWLINS, Queen's-road, Peckham.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to respectable parties. Freehold Land to be sold for building purposes.—Apply to Messrs. ——, at the Offices of Mr GEORGE MORGAN, Architect, 3, Chancery-lane

BUILDING LAND TO BE LET, at HALLSVILLE.....Term 1,000 years, for small cottages.
CANNING TOWN ..... " 1,000 " for cottages
NORWOOD..... " 1,000 " for villa residences
STRATFORD ..... " 100 " for small cottages
POPLAR..... " 98 " for fourth-rate houses.
Advances 7d. to 10d. at 5 per cent. on each cottage
Apply to Mr. Wm. ELLIS, Architect, Stansby-road. Limehouse.

FREEHOLD LAND.—Wanted, at Hampstead, Norwood, Hampton, Windsor, or some healthy spot within about 30 miles of London, from twenty to One Hundred Acres.—Particulars and price to be sent to Messrs. NELSON and INNES, Architects, No. 6, Whitehall.

FREEHOLD LAND TO BE LET, on BUILDING LEASES.—The Rev William Ford and Mr. Henry Wetton, the Rector, Rachor, Bartholomew, Tollington-park, have to offer TWO valuable PLOTS of FREEHOLD LAND for BUILDING LEASES, for a term of ninety years, in Barford street, Liverpool-road, Islington. The land-tax is redeemed, and the ground is ready. For particulars, apply to Mr. HENRY WEBBER, 31, Old-street, St. Luke's.

NATIONAL FREEHOLD LAND SOCIETY, 51, Moorgate-street, London.—Parties wishing to Let, Purchase, Manage, or Co-operate in the Formation of Estates, are requested to call at the Office, or address letters to the Secretary, who will give every information.

January 1, 1856. W. E. WHITTINGHAM, Secretary.

FREEHOLD GROUND, CHANCERY-LANE and FETTER-LANE.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 26th of FEBRUARY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking, on Building Lease for Eighty Years, certain PLOTS of GROUND, situate at the southwest end of Chancery-lane, and the south-east end of Fetter lane.—Further particulars may be had, and plans seen, on application to Mr. HAYWARD, Engineer to the Commission, at these Offices, in the Guildhall. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for approval; and do not bind themselves to accept any proposal, unless deemed advantageous.

JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, January 2, 1856.

WANTED, on LEASE, in or near the City, PREMISES, suitable for a Builder, with sufficient working room for twelve or fourteen joiners.—Address to A. B. 27, Weymouth-terrace, Hackney-road, stating terms, &c.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 15 ton Cranes. Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

ELIGIBLE MANUFACTURING PREMISES TO BE LET, with Boiler, Shaft, and Engine.—Apply at No. 7, St. Mary-street, Whitechapel.

P. HOOKER, ENGINEER, having larger Premises than he requires, is desirous of LETTING a Part, consisting of a six-roomed Dwelling-house, with Two spacious Workshops in the rear, 42 feet by 18 feet, with gateway entrance. May be let together or separately, with or without steam power. Also, the Use of some First-class Machinery.—Apply at 12 and 13, Pump-row, Old street-road.

HOUSES WANTED, Freehold or Leasehold, having from fifty years and upwards to run, in Camden-town. Amount of purchase, 500*l.* and under. Particulars, free, to be sent to Mr. WYATT PAPWORTH, Architect, 14a, Great Marlborough-street.

WANTED, in the Neighbourhood of Paddington, a small PLOT of GROUND, for about Ten or Twelve Second or Third-rate Dwelling houses, eligible for letting. Address to Mr. W. FORSTER, Conduit-place, Paddington.

TO BUILDERS.—PUTNEY.—Unfinished Villa Residences, within five minutes' walk of the station. A FEW PAIRS of TEN-ROOMED VILLAS (with good gardens laid out and planted) TO BE LEASED, separately or otherwise, for 100 years, at moderate ground-rents. These houses are in the course of being completed in a very superior manner, and a great proportion of the purchase-money may remain on mortgage, and advances will be made for finishing. Apply to Mr. A. C. HOOK, Land Agent and Surveyor, 14a, Great George-street, Westminster

TO ARCHITECTS, SURVEYORS, &c.—Buckingham-street, Strand.—TO BE LET, the whole or a portion of the Upper Part of an excellent FAMILY HOUSE, adapted either for Offices or Private Residence, consisting of a large front room on the first floor, three on the second, three on the third, with excellent kitchens in the basement.—Apply at 13, Buckingham street, Strand.

TO BUILDERS and OTHERS.—Freehold Land at Old Ford, near Bow.—TO BE SOLD, a Bargain,—10 only, SEVEN EARLS-TERRACE, Old-ford, on the London and Suburban Freehold Land Society's Estate, at Old Ford, which will be offered to the members for a few days, the roads being all completed. The Cash wanted within the week.—Address H. R. care of Mr. Taylor, 70, Frenchurch-street City.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is recommended for its extreme whiteness and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. Any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide a certain proportion of sulphate of barytes, increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the many houses painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark on the casks by Messrs. BLAKEDELL, SPENCE, and CO.; when ground and dry, by Messrs. R. B. MORLEY and SON, and by the Company's Grinding Agents in London, Messrs. CHARLES DE VAUX and CO. Wholesale Agents, 63, King William-street, City; and by the Manufacturing and Painting Agent, Mr. PRICE BRADY, Pimlico Works, Pavement-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, mansions, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-brick; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 28, and 56 lbs. each upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to Mr. H. H. RICHARD, late of Coade's Original Works, and successor to them in the manufacture of the invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our best buildings, and is the only material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. All kinds of Ornamental and Designed Chimney Shafts and Pots to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-CRETA, Manufactured at Millbank-road, Pimlico. Capitals, Cornices, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-relievi, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments, to scale. Sold, fixed, and delivered in the country, and warranted to stand Heat and Frost, either in Buff or Red coloured Terra-cotta.—A great variety and large stock may be seen at Messrs. GRISSELL'S Warehouse and Show rooms, No. 1, Broad-street, Paddington.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX, SAVAGE, & WYMAN, Nos. 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at No. 13, Hunter-street aforesaid, in the Parish of St. Pancras, in the County of Middlesex.—Saturday, January 5, 1856.

ARCHITECTURAL EXHIBITION,

Suffolk-street, Pall-mall East.—The Committee exceedingly regret that illness will prevent Mr. Billings delivering his lecture on "Ancient Scottish Architecture," on the 9th, but they have the satisfaction to announce instead a lecture "On the Application of Painted Glass in Architecture," by Charles Winston, Esq. Season tickets, half-a-crown ; single admission to lectures or exhibition, one shilling. Subscribers have the privilege of introducing a friend to the lectures.

ARCHITECTURAL EXHIBITION, and

COLLECTION of PATENTS and MANUFACTURES connected with Building, at the GALLERIES, 53, SUFFOLK-STREET, Pall-mall East, NOW OPEN, from NINE till dusk. Admission, One Shilling ; or at all times to the Galleries, and to all the lectures, by season tickets, Half-a-Crown each. Lecture for TUESDAY EVENING, JANUARY 15, at EIGHT o'clock, "Early Christian Art as illustrated in Mosaic Paintings," by GEORGE SCHARF, Jun. Esq.—Lists of lectures, Tickets, and all particulars to be had at the Galleries.

BOARD of TRADE DEPARTMENT of

SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects :—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c, the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE ; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendents, Mrs. Wyon. Fees per session.—Advanced Class, 2l. and 4l. ; Elementary Class, 1l. ; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

CONTRACTS.

TO BUILDERS. — The ERECTION of a NEW UNION WORKHOUSE. — Persons desirous of CONTRACTING with the Guardians of the Poor, of the West Bromwich Union, in the counties of Stafford and Worcester, for the ERECTION of a NEW UNION WORKHOUSE, capable of affording accommodation for 600 inmates, together with the several buildings and offices, proposed to be connected therewith, at Lyndon, in the parish of West Bromwich, may inspect the drawings and specifications thereof, at the Offices of Messrs. BRIGGS and EVEAL, Architects, No. 239, Bradford-street, Birmingham, on and after the 24th day of DECEMBER inst. until the 31st day of JANUARY next, where full particulars connected therewith may be obtained. Sealed Tenders, endorsed "Tender for Workhouse Building Contract," must be sent in, and addressed to me through the post-office, on or before the 1st day of FEBRUARY next. The contractor or contractors will be required to give such security as the Board may require for the due performance of the works agreeable to the plans, and the general conditions and specifications, such security to be prepared at his or their expense. The Guardians will not pledge themselves to accept any or the lowest Tender.

By order of the Board,
CHARLES STRINGER, Clerk.

West Bromwich, December 10, 1855.

CAMBRIDGESHIRE, ISLE of ELY, and

Borough of CAMBRIDGE PAUPER LUNATIC ASYLUM. TO BUILDERS. TENDERS are required for the ERECTION of a PAUPER LUNATIC ASYLUM, with Lodge and Farm Buildings, at Fulbourn, about three miles from Cambridge. Builders who may be desirous of Tendering, may inspect the drawings and specifications of Works, at the Office of the Clerk to the Committee of Visitors, at Cambridge, on and after the 14th day of JANUARY inst. between the hours of TEN and FOUR. Lithographed bills of quantities and forms of Tender, and of schedule of prices, may be had on application to Mr. GEORGE FOWLER JONES, Architect, York, on payment of three guineas. The Tenders must specify the cost of the main building, and that of the lodge and farm-buildings separately. Sealed Tenders are to be sent, under cover, addressed to the Clerk to the Committee of Visitors, not later than 12th FEBRUARY next, and any Tender not in accordance with the form supplied by the architect, will be rejected. The party whose Tender may be accepted will be required to enter into a bond, with two responsible sureties, jointly and severally in the sum of 10,000l. for the due performance of the contract. The Committee of Visitors do not bind themselves to accept the lowest or any Tender.

By order of the Committee of Visitors.
Cambridge, January, 1856. DAVID KING, Clerk.

SHIPLEY SEWERAGE WORKS. — The

Shipley Local Board of Health hereby give Notice, that they are prepared to receive TENDERS from competent persons for PROVIDING, LAYING DOWN, and COMPLETING CERTAIN BRICK and EARTHENWARE SEWERS and DRAINS, MANHOLES, GULLIES, and other WORKS, required for the sewerage and drainage of their district. Plans, sections, detail drawings, and specification as may be inspected, and printed forms of Tender obtained, at the Offices of Mr. J. McLANDSBOROUGH, Civil Engineer, 34, Queensgate, Bradford. Sealed Tenders must be delivered to the undersigned, on or before FRIDAY, the 8th day of FEBRUARY, 1856.—The Local Board do not bind themselves to accept the lowest or any Tender.

JO. THOMPSON, Clerk to the said Local Board.

Bradford, January 10, 1856.

CONTRACTS.

TO BUILDERS.

SEALED TENDERS for BUILDING

BARRACKS, at Bull Point, near Devonport, for a SPECIFIC SUM, will be received by the Director-General of Contracts, War Department, Pall Mall, London, on or before the 24th JANUARY, 1856, at Noon. Detailed drawings and specifications of the above, with every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 10th to the 24th JANUARY, 1856, both days included.

Royal Engineer Office, Devonport, 27th Dec. 1855.

TYNEMOUTH BURIAL-GROUND.—To

BUILDERS and CONTRACTORS.—The Burial Board for the Parish of Tynemouth are prepared to receive TENDERS for the following WORKS connected with the New Burial-ground at Preston, viz.:—

CONTRACT No. 5.—Two Chapels.
CONTRACT No. 6.—Superintendent's House and Office, and Gardener's Cottage.
CONTRACT No. 7.—Front Entrance and Side Entrance, Iron Gateways, and Masonry connected therewith.

The plans and specification of the works may be seen on and after the 31st instant, between the hours of TEN a.m. and FOUR p.m. until the 18th of JANUARY next, at the Office of the Architect, 12, Clayton-street West, Newcastle-upon-Tyne ; or at the Borough Surveyor's Office, Norfolk-street, North Shields. The Burial Board will not object to receive Tenders for the execution of the whole of the works in one Contract. They do not bind themselves to accept the lowest or any other Tender. The Tenders are to be sent in to the Town Clerk's Office, Howard-street, North Shields, on or before FOUR p.m. of the 28th JANUARY next endorsed "Tender for Tynemouth Burial Ground." Nos. 5, 6, and 7, as the case may be. The Contractor will be required to give security for the due performance of the works.—By order,

THOMAS CARR LIETCH, Clerk to the Burial Board.

Borough of Tynemouth, 26th December, 1855.

TO STONEMASONS.

PERSONS desirous of CONTRACTING

for the external MASONS' WORK of EIGHTEEN first-class HOUSES, now in course of erection near Hyde-park-corner, being chiefly of Portland and Caen stone, may see the drawings and specification on application to Mr. WELCHMAN, 83, Rutland-gate, Hyde-park, Middlesex. Money will be advanced to the amount of 75 per cent. as the works proceed, and no one will be allowed to Tender who cannot give proof of being able to execute the work in the most prompt and satisfactory manner.

THE NETHERLANDS LAND

ENCLOSURE COMPANY.—CONTRACT for ENCLOSURE WORKS. — The DIRECTORS are prepared to receive TENDERS for the CONSTRUCTION of a FOLDER BANK, situate at BATH ZEELAND. Plans and specifications may be seen on and after the 24th day of DECEMBER instant, at the Company's Offices, at Bath, and at the Engineer's Office, 34, Great George-street, Westminster, where all necessary information may be obtained, from Messrs. RIDDER and GEORGE ROBERT STEPHENSON.—Tenders to be addressed, under seal, to the undersigned, at No. 2, Moorgate-street, London, on or before the 15th JANUARY, 1856. The Directors do not pledge themselves to accept the lowest or any Tender.

By order of the Board,
GEORGE FASSON, Secretary.

2, Moorgate street, London, December 11, 1855.

N.B.—The plans for the canal are now completed, and when approved by Government, the contract will be offered to public Tender.

TO BUILDERS.

LUDBOROUGH STATION, EAST LIN-

COLNSHIRE RAILWAY.—The drawings and specification of works for a GRANARY, intended to be built at the above station, may be seen at our Offices in Louth, on and after the 14th to the 19th inst. by builders willing to submit TENDERS for the ERECTION of the same.—Tenders to be delivered to us on or before the 22nd instant ; the lowest of which will not necessarily be accepted.

MAUGHAN and FOWLER, Architects.

Louth, 2nd January, 1856.

CONTRACT for BUILDINGS for LOCO-

MOTIVE DEPOT.—MONMOUTHSHIRE RAILWAY and CANAL COMPANY.—The Directors of the above Company invite TENDERS for the ERECTION, in the town of Newport, of STABLES, FITTING SHOPS, OFFICES, SMITHY, COKESHED, WATER-TANK, &c. &c. adapted for twenty-two engines. Drawings and specifications may be seen at the Engineer's Office, Dock-street, Newport, on and after the 31st DECEMBER instant. The quantities will have to be taken out by the parties Tendering. Sealed Tenders, properly endorsed, and addressed to the Directors, are to be sent to the undersigned not later than the 19th day of FEBRUARY next ; and the parties tendering are to be in attendance at NINE o'clock in the afternoon of the following day, when the Tenders will be opened. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

GEORGE HARRISON, Secretary.

Newport, Monmouth, December 21, 1855.

CONTRACT for DREDGING.—The

Directors of the Commercial Dock Company are willing to receive TENDERS for DREDGING a PORTION of their DOCKS at Rotherhithe, the plan and specification for which may be seen at the Dock Office, 105, Fenchurch-street, on and after the 12th inst. The Tenders to be delivered, addressed to the Secretary, at the Office as above, on or before FRIDAY, the 25th inst.

By order of the Board,
H. K. SMITHERS, Jun. Secretary.

Commercial Dock Office, 105, Fenchurch-street, London, 7th January, 1856.

Lloyd's Marble Wharf, Thames-bank, Pimlico,
Adjoining Vauxhall-bridge.

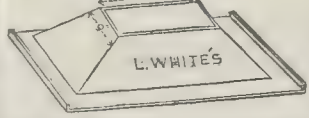
Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

PARIS EXHIBITION.—ENAMELLED SLATE. TWO FIRST-CLASS MEDALS.—Mr. MAGNUS is the only exhibitor whose productions received this distinguished honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1845. This beautiful material, Enamelled Slate, which for its [illegible] marble, is [illegible] into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The price is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lobe tables, chiffoniers, consoles, &c.; baths in stories, altar-tablets, pilasters, columns, tazze, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and larries. Price lists can be had on application to Mr. MAGNUS, 60, Old, Upper Belgrave-place, Pimlico
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.



VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Penitentiaries, and other Institutions, for Paving Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand as Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SCAGLIOLA done on an IMPROVED PRINCIPLE.—I refer to the Gothic Arch by D. Dolon in the Great Exhibition of 1851, which gained the only Prize Medal awarded for the manufacture of the above work.—Specimens to be seen at 199, Drury-lane, two doors from Holborn, superior to any yet offered to the public, with a choice Collection of Ornaments for building purposes, Trusses for Shop-fronts, &c. &c.

ASPHALTE.—For SALE, 250 Tons, in one lot, or small quantities.—For samples and particulars, apply to Mr. BLACKWELL, Surgical Instrument Maker, 3, Bedford-court, Covent-garden.

FENDERS, STOVES, and FIRE-IRONS. Buyers of the above are requested before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto, with ormolu ornaments and two sets of bars, 5l. 10s. to 12l. 12s.; bronzed fenders, complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 15s. to 7l. 7s.; fire-irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth-plates. All sizes, he is enabled to sell at these very reduced charges
Firstly—From the frequency and extent of his purchases; and
Secondly—From those purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS. The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers, in Metal and Glass, all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-houses. The collection, which has been arranged expressly for this, these are ON SHOW in the SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the most remarkable in the kingdom, viz. from 12s. 6d. (two-light) to 16l. 16s.

THE BEST SHOW of IRON BEDSTEADS in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS solely for the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses, fitted complete. Bedsteads, from 10s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d. to 3l. 3s.; Cots, from 30s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.
The alterations and additions to these extensive premises already by far the largest in Europe), which occupied the whole of last year, are now completed; they are of such a character that the entire Stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver Goods, Plated and Japanned Wares, Brass and Iron Fenders, Lamps and Gaseliers, Iron and Brass Bedsteads and Bedding) is arranged in Sixteen Large Show-rooms, all on one floor, thus affording facility in the selection of goods the examination of which is at once complete.
Illustrated Catalogues sent (per post) free.

Broad-paradise, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of a superior tone, in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives superior tone and facility for ringing.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

'ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

STEAM PRESSURE GUAGES.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Iron-mongery Establishment, 29, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S.W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Sliding Spindles; Dr. Arnott's Ventilator, 4s; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURGH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

,,	XIX.	,, the Italians	5 ,,
,,	XX.	A series of Leaves drawn from Nature as Models of Ornament.	10 ,,
			100

The Author will endeavour in these several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern each and all of these styles, and those which are peculiar to each. He will further attempt in the 20th chapter to show how, bearing in mind those general laws which he finds also to pervade the works of nature, and returning to her for fresh inspiration, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times instead of blindly following in the footsteps of the past.

The collecting of these examples out of materials scarcely touched for many years on the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless, that in this selection, arrangement, and the remarks engrafted thereupon, any who wish for the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

FERGUSSON'S HISTORY OF ARCHITECTURE.

This day, with 850 *Illustrations on Wood* (1,000 pp.), 2 *vols. 8vo.* 36*s.*

THE ILLUSTRATED HANDBOOK OF ARCHITECTURE.

BEING A CONCISE AND POPULAR ACCOUNT OF THE DIFFERENT STYLES OF ARCHITECTURE PREVAILING IN ALL AGES AND COUNTRIES.

By JAMES FERGUSSON, M.R.I.B.A. Author of "Palaces of Nineveh and Persepolis Restored."

"Mr. Fergusson's qualifications for writing a book such as that before us are many and important. His range and research are remarkable, as a list of his previous works will testify. He can criticise more than one country or school. He has visited many countries, and he expresses with the weight of personal knowledge. With, nothing appealing to eloquence, he succeeds in making his subject impressive and interesting to a high degree. The illustrations are lavishly numerous, and are taken from many sources."—*Spectator.*

"A manual which is not only an able digest of the history and principles of architecture in its best and largest sense, as we now understand them, but at the same time so full of practical yet popular explanation as to contain a sufficient description of all the most famous examples in the world. Every description plans and sketches are attached, which are, in fact, not only pictures charming to the eye, but items of essential value to the architect. The whole book is a special narrative threading a side light upon Chinese, Japanese, and Indian architecture, with the curacy demanded by the professional reader, much of the lively skill required to fix the interest of men who read only to gratify their tastes and stretch their powers of enjoyment."—*Examiner*

Ballast screened or unscreened, by the yard or per barge. Bricks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

The Builder.

VOL. XIV.—No. 675.

ON the 3rd inst. Professor Cockerell commenced his course of lectures on Architecture, at the Royal Academy, to a smaller audience than we would have seen there, mainly owing, as we believe, to the want of proper notice to the public. The now veteran Professor apologised for his re-appearance for the third time since his announcement of a successor who would give to the students his new lights and a fresher activity, suited to our times, especially, after a fifteen years' prosecution of these lectures, through the same hands and enunciation; but his appointment had not yet been concluded in the slow process of academic changes. With respect to academical provisions, he must say that the comparison of our own architecture with those of France showed us to be wofully deficient,—that paternal government contrasted with our orphan government most advantageously for our instruction. It might be called the comparison of the system of protection and the voluntary and free-trade system, which might do much that was good, as the Institute and others, but there must be much that perished in the wearing. Concentration and a systematic order and administration, as in France, of all education—of this, as of other departments—was most desirable. We had learnt, by fatal experience, what the neglect of such administration was in war: it could not be doubted that it might be so in peaceful occupations, if put to the test, no less to our disadvantage; and it was the deliberate opinion of the scientific English members of juries in France that the French protective system of culture, encouragement, and honours, was fast leaving our own orphan and desultory system in the rear. The architectural drawings of the *monuments historiques*, and of the *grands prix de Rome*, greatly surpassed our national productions in diligence, style, and beauty, and were examples to follow. The French members of the jury on architecture had shown the utmost courtesy and indulgence towards the English school, and had distributed their honours with the greatest generosity. The Professor was happy to announce reforms in our own academic school of architecture, from which he hoped very great benefits. There had been much chattering lately about diplomas. On the other hand, he lamented to say, that the silver medal in the Royal Academy was not even tried for by a single candidate, and the gold medal very inefficiently by one only. He asked what better diploma a student could obtain than a gold or silver medal, and a testimony that he had gone through the customary discipline and apprenticeship under an able master. There was no distribution of diplomas in France; but the country and parentage of every gold or silver recipient was recorded in the archives of the Institute, and the name of the master under whom he had been educated.

After this preface, he proceeded to the question now often asked, what is architecture? The Academy answered the question, by the law respecting lectures, which he quoted. Mr. Fergusson, who had lately published an admirable handbook of architecture, asking the same question, had answered it by 800 engravings of the most remarkable buildings in the world, on the same scale, by which, in our latitudinarian times, we could impartially institute those comparisons which a candid mind could not fail to profit by. Amongst the many answers to this question, he would suggest one which he thought very applicable to those wondrous novelties, which the almost new material of iron, as a building material, was presenting to us.

The progress of architecture depended as much on discovery of new materials and new methods of building as on taste. Iron was used by Tubal Cain as a subsidiary material. It had been employed in building ever since; but never in solid and in the gross as a constituent part of the substance of building before Mr. Rennie employed it as voussoirs in the Southwark-bridge. Sir Robert Smirke had nobly followed in applying iron in trabeation, and so had Mr. S. Smirke in the new reading-room of the Museum, and others; but the engineers had kept ahead of the architects, from Mr. Rennie to Messrs. Stephenson, in displaying the powers of iron. The architects had slowly followed: engineers are the pioneers of the architect: but recent experiments since 1851, in England and France, showed plainly that iron would revolutionize architecture, and would give to the art in the nineteenth century that characteristic style which we had long been whining about, as the desideratum and the deficiency of our age.

Iron had been cited in Deuteronomy as the essential and last fruit of the promised land: that fruit we have at length come to enjoy in all its plenitude. Our interiors, as halls and churches, would assume new development and grandeur by iron, since we have seen 200 feet span at Birmingham without abutment, and 150 feet at Paris in still more enduring structure. The Pantheon of Rome, Sta. Sophia, St. Peter's, the Baths, and the great Riding-house at Moscow, would hide their glories, and iron would thenceforward dispense with pillars and clerestory, flying buttresses and abutments, and roof our churches in bold and single spans. Architecture might be likened to the Janus of old—the one face was that of an aged pedant proceeding only on retrospective experience and authority from old example: it was this that the ecclesiologists adhered to fanatically. The other head was young, looking only forward: enterprising, prospective, he was ever for taking advantage of the discoveries and appliances of the day, and for incorporating them in his work. It was the latter who would now prevail, and the Professor considered that with all due reverence for antiquity and precedent, we ought to open our eyes to the reconciliation of this new material and its peculiar faculties with the laws of proportion and taste; and this was a problem worthy of the best spirits, both as to the form of roofs or ceilings, and the form of supports, which, in iron, with 1-40th part of the substance of stone, would give equal strength of support. These pillars would be sought at Alhambra, in the paintings of Herculaneum and Pompeii, and even in Gothic structures.

Iron might be termed the osteology of building. Hitherto the architectural system had proceeded on statics and equipoise of molecules, as if the human frame had been built without bones. Now our buildings would have bones, giving unity and strength which never before existed. The nervures of the Gothic would now be in uniform and single arcs, erected at once. The library at St. Geneviève, by Mons. Arbruste, exhibited an experiment in this way. Iron in floors was used to admiration in Paris, and had attracted our best constructors.

Concrete was a novelty characteristic of the nineteenth century, or rather a resuscitation of ancient practice, as he had long ago shown by quoting Philibert de l'Orme; but in the bridge of Alma, raised within these eight months at Paris, concrete had taken a new and admirable development, where three arches of about 140 feet span had been cast on the centreing, forming one vast stone from pier to pier. The only voussoirs used were in the face of the arches. A peculiar cement and hard fragmented stone had effected this with vast economy of cost and time, and promised well. The so-called Temple of Peace at Rome was ceiled and vaulted with a similar concrete. The coffering was previously moulded in all their detail upon the centreing, and then covered with grosser concrete, so that on removal of centreing all was finished. A vast fragment now lies in the middle of the Temple, and at Tivoli we find that Adrian had employed the same simple process.

Another novelty characteristic of the nineteenth century was glass. Never before had it attained such magnitude, strength, and clearness. How greatly had it contributed to the elegance of our buildings. For perspective and for endless uses it had justified all the eulogies pronounced by Sir Robert Peel, when he relieved this material of its heavy duties.

The polish, the ease, and cheapness we now give to granite have made it another acquisition of our times of great value; and so the serpentine of Cornwall gives us great beauty and colour.

To turn all these novel materials to the best account should now employ our ingenuity. A revolution is inevitable in interiors, and modifications in exteriors. Let us look to the daily evidences of transition, and help them with those forms and laws of taste which the architect of the beautiful is best qualified to recommend; and there need be no fear but that the builders of the nineteenth century will, in their structure, at all events, exhibit abundant originality. If we labour at a competent exhibition of these novelties with all the accompaniments and law of taste, it need never be doubted that the year 1900 will display in architecture that which never before was dreamt of, characterising the century in a manner worthy of its extraordinary progress in civilization.

THE METROPOLITAN BUILDING ACT.

THE METROPOLITAN BOARD OF WORKS.

THE new Building Act has come into operation, and we would point out to the metropolitan builders the necessity of giving two days' notice to the District Surveyor before commencing a building, or any work to, in, or upon any building, before re-commencing works stopped for a period exceeding three months, and before a new builder enters on any work in progress. The notice must state "the situation, area, and height, and intended use of the building." If this be not done, a penalty not exceeding 20*l.* is summarily recoverable before a Justice of the Peace. Apart from this, it will be to the builder's interest carefully to give the proper notice. The new Act is far from clear on many points, and will not be carried out satisfactorily to all parties without harmonious action on the part of the builders generally and the District Surveyors. We speak advisedly when we say that the District Surveyors as a whole are a most intelligent, able, pains-taking, and upright body of public officers. We have reason to know that they are labouring hard at this time to arrive at such an understanding of the Act as shall enable them properly to discharge their duty without entailing unnecessary hardship on individuals, and we ask for them the liberal co-operation of all builders and house-owners.

There are several structural requirements in the new Act which will press hardly; for example, the restriction, by sec. 13, of "recesses and openings" in external walls to an extent equal to one-half the area of the wall in which they are made. In the case of workshops and manufactories, where light is required, this will interpose a difficulty. The requirement, too, by sec. 24, that "the eaves or cornices to any overhanging roof, except the cornices and dressings to the window fronts of shops, and except the eaves and cornices to detached and semi-detached dwelling-houses, distant at least 15 feet from any other building, and from the ground of any adjoining owner, shall, unless the

Metropolitan Board otherwise permit, be of brick, tile, stone, artificial stone, cement, or fire-proof material," will put a difficulty in the way of the most natural sort of roof, and should have the consideration of the Metropolitan Board at once.

Such of our readers as are interested will doubtless have observed that the width of streets and alleys is not regulated by the new Act as it was by the last Buildings Act. We have avoided allusion to this until now for very obvious reasons, although pressed to do so by two or three correspondents. The Metropolitan Board of Works have power (by sec. 202 of the Metropolis Management Act), as we have before now pointed out, to make, alter, and repeal bye-laws for regulating the plans, level, *width*, surface inclination, and the material of the pavement and roadway of new streets and roads, and will doubtless take the necessary steps in this matter forthwith. At the last meeting of the Board, the point was brought before them by Major Lyon, who had given notice of a motion to the following effect:—"That it be at once resolved by the Board, that no new street should be permitted to be constructed of a less width than 40 feet, and no alley or court of less than 20 feet in width." He said he had been induced to persevere with this motion from information he had received, that persons taking advantage of the present unsettled state of affairs, were about to press forward building speculations which might hereafter be productive of great injury to the health of the metropolis.

Mr. Doulton thought it better to leave this subject to the committee upon the bye-laws; and Mr. Collinson was of the same opinion as Mr. Doulton, and moved as an amendment, "That the motion of Major Lyon be referred to the committee on the bye-laws," and this was carried. Mr. Dixon then said, as this would go forth to the public, it might induce certain parties to suppose that during the interregnum they might play all sorts of tricks; but he hoped the press would disabuse such persons' minds upon the point, and let the public know that that Board had enormous powers, and could put down nuisances in a summary manner.

It may be well to note, that after a bye-law to the desired effect has been passed by the Board of Works, it will rest with the Vestry, or District Board, to take steps against any who may act contrary to it.

So, with respect to buildings erected without the consent, in writing, of the Board of Works, beyond the regular line of buildings in the street in which the same are situate, within a certain distance from the highway, it is the Vestry, or District Board, who may cause the same to be demolished, or set back, as the case may require.

By the Metropolis Management Act, one duty is imposed on district surveyors, which ought, certainly, to be placed in other hands,—and that is as relates to the occupation of underground dwellings. Section 103 says, every district surveyor "shall, without any fee or reward, report periodically, and otherwise, as the said Metropolitan Board may order, to such Board, all cases in which rooms or cellars are occupied contrary to this enactment in the district of such surveyor; and also to the respective Vestries and District Boards, all such cases, occurring within such parts of his district, as may be within their respective parishes and districts." The same section sets forth that "Every room or cellar in which any person passes the night shall be deemed to be occupied as a dwelling within the meaning of this Act;" so that to carry out the requirement, the inspection should be constant. This it is manifestly impossible the district surveyor could effect consistently with his proper duties: moreover, it is altogether out of his province, which is to superintend and see that *structural* requirements are complied with. It would more properly form part of the duty of inspectors of nuisances, or the police; and it is to be hoped that the Board of Works and the vestries will take this same view of it, and relieve the district surveyors from a duty which it is quite impossible they can efficiently perform.

In concluding these jottings, let us mention that Mr. F. W. Laxton has issued an edition of the Act, "with notes of cases explanatory of its law and practice;"* and that Mr. William Young, architect, has published "A Key to the Metropolitan Building Act,"† on the model of the alphabetical epitome of the old Act published in our pages, and afterwards in a separate form. It is to be regretted that the schedules of the Act, which are set forth on one sheet "with their constructive clauses newly arranged," are not lithographed more clearly.

ON SOME FRENCH CHATEAUX OF THE AGE OF FRANCIS I.‡

THE subject on which I am about to address you is one which has no recommendation of novelty. The buildings to which I shall refer are, I doubt not, perfectly well known to you, either from having actually visited them, or from pictorial representations; but it is on the very fact of the popular appreciation of these buildings, and on the pleasant memory of sunny hours which may have been passed by you within their precincts, and which may now be in some degree recalled to your mind, that I rely for whatever interest may attach to the subject I have the honour to bring before you.

I do not purpose to give any detailed chronological account of the dates of these buildings, or of the history of the times in which they were built. It is now, I find, ten years ago since I had the honour of reading in this room some account of the history of Renaissance art and its professors in France; but the subject appears to demand that I should as a preliminary refer to that connection which arose between France and Italy consequent on the wars of Charles VIII. in 1494; of Louis XII. who, five years later, invaded Italy, and of Francis I. who, crossing the Alps in 1515, there gained the battle of Marignan.

At that time, after ages of change and struggle, Europe had assumed nearly its present political division of kingdoms and states. Italy had reached a state of high cultivation: ancient literature, which had there never been wholly lost sight of, was revived: printing had just been discovered: religious inquiry had commenced, and the Reformation was about to take place: material riches had accumulated: society had become formed; and intellectual activity characterised the age.

In architecture the Alps divided two very different styles. On the north side, the colossal transepts of Beauvais were being built, and the lofty spire of that cathedral, which has long since fallen; whilst its cotemporaries, the spire of Antwerp and the unfinished tower of Mechlin, remain amongst the greatest works of any time or country. On the other side of the Alps, the great dome of Florence had been built, and the mighty fabric of Saint Peter's was progressing.

Irrespective of foreign influence, it is certain that Gothic art had outgrown itself: it had grown as a stately plant on the ruins of debased Roman or Byzantine art; at first slightly decorated by curling leaves, narrow, nervous, and sparse, as in our early English of Lincoln; developing itself little by little, growing more pulpy and full, as at St. Alban's nave or Beauvais choir; breaking out into more luxuriant branches, with the buds abundant, as in our early Decorated, and the flower expanding itself as in the days of our Edwards; until at last, in the full luxuriance of the French Flamboyant and the late German styles, both more beautiful and picturesque than our late Gothic, the flower had expanded sometimes to an unnatural size and bursting luxuriance, shedding its ripened seed; but whilst the flower grew, the original stem in French architecture had lost its form and significence; its roots had become crystallized into the most complex forms; in Germany the stem had been lopped and pruned, wreathed, intertwisted, and twined, until its early upward tendency was lost, and the style in both countries had grown into a still luxuriant but feeble condition. In this state it was ready to receive the impress of any new thought, and accordingly we find that no sooner had the French become acquainted, through their intercourse with Italy, with the revived classic architecture which flourished there, than they at once adopted it. Not that it had at first any perceptible effect on the structural character of their works, being only introduced as decoration; of which we have very excellent examples in the screen surrounding the Lady Chapel at Chartres, a Flamboyant work most elaborately and exquisitely wrought, with a profusion of ornament of the Italian Renaissance; and the arcade next the courtyard of that part of the palace at Blois, which is of the period of Louis XII.; the whole of which is one of the most perfect and characteristic specimens which exist of the late Gothic of that monarch's reign, and to which I shall again have occasion to refer.

The new style once having taken root was not, however, long in fully developing itself, and under the fostering patronage of Francis I. who ascended the throne of France in 1515, at the early age of twenty-one, it rapidly rose into great importance, and several remarkable works were produced which will always remain as models of true and original art.

Amongst the most important in point of size, and for its historical associations, may be noticed Fontainebleau, a spot not less known from its magnificent palace than from the natural beauties of the great forest which surrounds it. Fontainebleau, like most of the châteaux, is of old origin; an ancient feudal house, added to or destroyed, and new buildings raised in its stead. It was the favourite residence of Francis I. who made it the cradle of the arts and the chief seat of his court. From his day to the present it has been connected with the history of the French kings, particularly so with the first Napoleon; and it owes much of its present splendour to the care of the lately deceased monarch, Louis Philippe. By his munificent patronage Francis I. here maintained and founded a school, called after him the School of Francis I.; and by his liberality have become associated with this palace the illustrious names of Leonardo da Vinci and Benevenuto Cellini, Andrea del Sarto, Sebastian Serlio, Primaticcio, and le Rosso. Primaticcio was the artist engaged for the greatest length of time: he had a fixed salary of 1,200 livres a year, besides many marks of royal favour; and was assisted by Gio. Battista Bagnacavallo, Rugieri da Bologua, Prospero Fontana, Damiano del Barbieri, and Nicolo dell'Abate da Modena, which names I cite to show how much was done to introduce the revived Italian art. Fontainebleau continued to be the residence of the king, who here not only encouraged the arts but also greatly increased the library. All the buildings round the Cour Ovale are of the time of Francis I. also great part of the Cour du Cheval Blanc, which was either entirely rebuilt by him or very much altered. He here sumptuously entertained Charles V. and on the occasion of the birth of his grandson, afterwards Francis II. born of Catherine of Medicis in 1543, he gave a great fête; and two years later, at a similar fête in honour of the birth of a princess, Henry VIII. of England was represented by Admiral Lord Dudley. Francis died in 1547; and to the last so great was his love of Fontainebleau, that in going there he was accustomed to say, "*Je vais chez moi.*" Henry II. and Diane de Poitiers his mistress, rather than his Queen Catherine of Medicis, reigned at Fontainebleau, and continued the work which Francis had begun. Catherine de Medicis, during her long regency, enriched Fontainebleau with statues, bronzes, and pictures: she made additions to the Cour du Cheval Blanc, and built a staircase in the place occupied by the present staircase du Fer à Cheval, which is a much later work.

The names of Henry IV. and Gabriel d'Estrées are next connected with the progress of Fontainebleau. Henry, besides other minor works, built the large court bearing his name, for the more convenient accommodation of his retinue: it is a distinct building, and wants much of the interest of the older buildings of the time of Francis. The other buildings of the palace are all of later date, and of a style on which our attention is not now engaged. Henry IV.'s eldest son, afterwards Louis XIII. was born at Fontainebleau, in 1601.

* Butterworth, Fleet-street.
† Sweet, Chancery-lane. 1856.
‡ Read at a meeting of the Royal Institute of British Architects, on the 17th December, by Mr. Edward P'Anson, Fellow.

The château of Blois, the next to which I shall allude, is placed in the middle of the town. The most important part is of the time of Francis I. but it is highly interesting as a work of art of many ages, as well as from its historical associations. It is a considerable pile of building surrounding an open court, and referable to three very distinct periods; one of or antecedent to Louis XII.; the second that of Francis I.; and the third a later date. Of the older buildings, are the Salle des Etats, a very fine room of the twelfth century, and the Tour des Oubliettes, part of the old castle, which is now masked by the works of Francis I.

Louis XII. was the first royal resident of Blois, but it had already undergone considerable alterations and improvement under his father, Charles Duke of Orleans, who was long a prisoner in England. Louis XII. was born at the château of Blois, and it was his favourite residence in after years. The exterior façade of the portion built by him was finished in the month of December, 1501. The whole of this building is a very remarkable work: it is of brick, with stone dressings, and shows distinctly the incipient traces of the Italian and Renaissance to which I have before referred: it is considered by the French the most perfect specimen of Late Gothic. As an example of domestic architecture, I know of nothing finer, and it has been very well given in a work published by Mr. Henry Clutton, in 1853. Louis XII. died in the year 1515, and the wing, known as the wing of Francis I. commenced by Louis, was carried on and finished, it is said, in three years. Next the court-yard, its principal feature is its beautiful staircase, and the façade next the town, rising from a rocky elevated base, and owing much of its dignity to the commanding site on which it stands, is a most graceful and dignified composition. The massive natural base on which it stands supports a range of building consisting of three stories, surmounted by an open colonnade. The windows are, for the most part, deeply recessed, and divided by flat pilasters, whilst three projecting windows, and one projecting balcony, diversify the general breadth of design in the happiest manner. The more modern portions of the palace were chiefly added by Gaston of Orleans, brother of Louis XIII.

Blois, which was in a very dilapidated state, has been nobly restored as to that part which is of the time of Francis I. This work is due to the care of the king, Louis Philippe, and has been most ably carried out by M. Duban, at a cost of 400,000 francs (16,000*l.*). All the external sculpture has been carefully and successfully renewed,—the glazing entirely replaced,—the floor paved with tiles (the best rooms with encaustic tiles),—the walls lined and decorated,—the wooden ceilings redecorated,—and the panelling to various rooms, and some magnificent chimney-pieces restored,—the whole interior coloured, and in some rooms richly gilt,—some part of the exterior coloured and gilt; forming altogether the most perfect and pleasing example of the age of Francis I. which is in existence.

This building is now used partly as a museum and partly for occasional festive meetings of the townsfolk, and at the period of my last visit, a few months since, its chambers, once the abode of royalty, and long the favourite residence of the House of Orleans, had served as an elegant series of ball-rooms for the inhabitants of Blois. The great feature is the noble staircase. On each floor, one half the building next the court-yard is occupied by the Salles des Gardes, and the other half by a series of rooms of various sizes, generally with no communication except through each other and into the Salle des Gardes.

The next building to which I would refer, is Chambord, built in the year 1523, by Francis I. Henry II. continued the works, and it is said that these two kings had 1,800 workmen employed upon them for thirty years. It was altered by Louis XIV. and disfigured by his architect Mansard, who divided the noble internal galleries into two stories, by wooden floors, and also materially altered the low building at the back, in order that it might accommodate the numerous retinue of the Grand Monarque. The building measures in front 80 toises, and is 60 toises deep: the four corners are flanked by four great towers: those at the back are now low; but in Ducerceau's view they are as lofty as the principal elevation, and thus materially add to the beauty and effect of the whole design. In 1749 they were low as they now are. The outer buildings enclosed an inner building, also flanked by four towers: the centre building is called the donjon. Each of these towers is 60 French feet in diameter. The central staircase is 30 feet in diameter, and from it radiate in the form of a Greek cross, four Salles de Garde, each 50 feet long, and 30 feet wide. These Salles de Garde are vaulted in stone, and have flat roofs. The panelling of the vaulting is ornamented with an alternate F, and the Salamander: the roofs are ornamented by "quantité de cheminées très ornées, quantité de tourelles et croisées qui semblent récréer la vue de ceaux qui se promènent sur ces terrasses." The central tower, about 100 feet high, is very much praised. The writer from whom I quote, an author of about a century ago, says it produces "le plus gracieux effet du monde." There are thirteen staircases, and 440 rooms in the château. The design is attributed to Primaticcio, but that it is really his appears very doubtful.

At present, this noble building is by no means in a satisfactory condition. It belongs to the Comte de Chambord, by some known and hopefully looked up to as Henry V. of France. His portrait hangs up in the little but excellent inn adjoining the palace, the only habitation, except a religious house, which obtrudes on its desolation. On my pointing it out to the hostess, she referred to it with an evident expression of hope, and looking forward to better days to come, and only answered my doubting remarks by saying;—"Ah, Monsieur, au bon Dieu, toutes les choses sont possibles."

In 1793 it was despoiled internally, and greatly defaced externally; and the domain being about to be sold, and the castle broken up in 1821, it was purchased by the people during the reign of Charles X. and presented to its present owner. Its situation is the very reverse of picturesque. It stands in a flat country, three or four miles from the banks of the Loire, and in just such a monotonous position as Wolsey, at about the same epoch, chose for his palace of Hampton Court. The fossés which anciently surrounded it are now filled up, but can be easily traced. Its last resident was King Stanislaus, of Poland,* whose apartments are still preserved in a habitable state; but all the rest of the building is utterly stripped of all internal fittings, and presents a scene of perfect desolation and departed grandeur, to which may almost literally be applied the touching verses of Hood:—

> "No dog was on the threshold, great or small,
> No pigeon on the roof, no household creature,
> No cat demurely dozing on the wall,
> Not one domestic feature.
> No human figure stirred to go or come:
> No face looked forth from shut or open casement:
> No chimney smoked; there was no sign of home
> From parapet or basement."

Ducerceau, who wrote as an old man, about 1560, thirty years after the building was erected, speaks of it thus:—

"La commodité du dedans a esté ordonnée avec raison et sçavoir. Car au milieu et centre est un escallier à deux montées percé à jour et entour iceluy quatre salles, desquelles l'on va de l'une à l'autre en le circuissant; aux quatre encoigneures d'entre chaque salle y a un pavillon, garny de chambre, garderobbe, cabinet et montée. Plus ès quatre coings de la masse de tout le bastimët se voyent quatre grosses tours garnies à chascun estage de toutes commoditéz, come chambre, garderobbe, privéz cabinets et montée."

Notwithstanding what Ducerceau says about the commodité of Chambord, it is extremely difficult to understand how any comfort could have been found in it; all the large rooms being given up to the guards, and the remainder are very small, scattered, ill-contrived, and reached by long galleries or open staircases.

Blois is much the same, but the principal rooms are of greater dimensions, and certainly better arranged. Chambord was a very favourite residence of Francis I. When the works executed during his reign were well advanced, it was visited in 1539, by Charles V. of Spain, when he traversed France; and in the declining days of Francis, it was much resorted to by his sister, the Queen of Navarre, whom Francis called his Marguerite des Marguerites. It continued to be occasionally resorted to by the French monarchs, and particularly by Louis XIV. who first came here that he might conceal his royal amours from his mother the austere Queen of Austria. The grand monarque visited the château for the last time in 1684.

Alfred de Vigny, in his novel of Cinq Mars, describing this building, says:—"On conçoit à peine comment les plans en furent tracés, et dans quels termes les ordres furent expliqués aux ouvriers; cela semble une pensée fugitive, une idée brillante qui aura pris tout à coup un corps durable, un songe realizé." And another more recent writer, not less enthusiastic, says:—"Quelle qu'ait été la pensée qui a enfanté Chambord, elle a sans contredit créé la Merveille de la Renaissance, cette époque qui a fait surgir du sol Européene tant de prodiges n'a rien inventé, rien laissé de plus beau et de plus saisissant." And another old writer says, the Palace of Chambord, "est bien le plus merveilleux en toutes pièces rares qu'il y ait en Europe, et comme abrégé de toute l'industrie humaine de son temps."

On a smaller scale than either of the preceding, is Chenonceaux. It was built by one Thomas Boyer, chamberlain of Louis XII. who following the example set by Francis I. some time after 1496, when he bought the estate built the present château, or rather commenced it, for he died in 1523, leaving it unfinished; after which it became a royal palace, and the property of Francis I. who frequented it often with Catherine of Medicis. By Henry II. it was given to Diana of Poitiers, who rebuilt the principal façade, and constructed the elegant gallery over the river. This gallery is called the Salle des Gardes, but is said to have been built by Diana of Poitiers to communicate with the left bank of the river, "où se trouvait un Sylvestre et plantureux bocage arrosé de fontaines et verdoyant comme un pré d'Avril." On the sudden death, however, of Henry II. and the advent to power of Catherine de Medicis, Diana of Poitiers was obliged in 1560, to exchange the château for that of Chaumont, near the Loire. This same year, our Mary Stuart visited Chenonceaux. Catherine retained this château until her death, in 1589, when she bequeathed it to Louise of Lorraine, wife of Henry III. Chenonceaux is a simple building in its form, as indeed all the buildings of this time are. It is a parallelogram on plan, with a chapel annexed on one side, and the great wing extending over the river at the back. The chapel, like that at Ecouen, is built in what appears to have been the conventional ecclesiastical style of the day, very similar to the church of Saint Eustache, at Paris. The principal façade is rather more massive in its treatment, the cornice more strongly marked than at Fontainebleau or Blois. There is a round tower at some little distance in front of the château, but unconnected with it: it is of the same date, but its use as part of the building is quite problematical, unless it were, as at present, a lodge to the main building. This château is now private property, but may be seen even when the family is in residence.

I may cite also the château of Anet, now demolished, which was the work of Philibert de l'Orme. In this building every resource of art was used to produce a perfect work. And the small portions which remain attest a great refinement, a marked advance on the works of Francis I.'s reign, and much elegance of design. The interior of the apartments were covered with panelling, executed with extreme care and richness, under Jean Goujon, and the painted windows were the work of Jean Cousin.

Before Philibert de l'Orme had completed Anet, Jean Bullant was employed by the Constable of Montmorency to build the château of Ecouen: this is a fine work, but the architect in some portions has been too anxious to copy the antique servilely, not accommodating it, as had been done so well in some of the other buildings I have referred to, to the feudal form of building to which it is applied, and the steep roofs which surmount it. On this work,

* 1723.

amongst other distinguished artists, Bernard of Palissy is said to have been employed. Ecouen is about six miles from Saint Denis: it is now used as a seminary for the daughters of the members of the Legion of Honour, and is not accessible to the public.

I may also here refer to the old façade of the Hôtel de Ville, at Paris, a well-known example of the era of Francis I. Ducerceau, who wrote during the regency of Catherine de Medicis, towards the latter end of the sixteenth century, enumerates and gives plates of no less than eighteen royal châteaux,—"Blois, Amboise, Villiers Costerets, Chadeval, Les Thuilleries, Sainct Maur, Chenonceaux, Le Louvre, Vincennes, Chambourg, Boulongne dit Madrit, Creil, Coussy, Folembray, Montargis, Sainct Germain, and La Muette." Writing after the wars of Francis I. and his successor the very wars which appear to have imbued the French monarchs of that time with their love of splendour, he says, "Jay pensé ne pouvoir mieulx à propos mettre en lumiere ce premier Livre des Bastimens exquis ce ce Royaume: esperans que nos pauvres Francois prendront, peult estre, en resputant, quelque plaisir et contentement, à contempler icy une partie des plus beaux et excellez edifices dont la France est enrichies pour le iourd'huy en chacune." Of these some are of early date, and several are now gone—swept away chiefly by the ruthless hands of the destroyers during the anarchy of the French revolution. The château of Madrit, built for Francis I. by Pierre Lescot, 1540 to 1550, must have been a very noble example. some of them, as the château of Chantilly, have still an enduring name—some, as the château of Gaillon, built for the Cardinal d'Amboise by Fra Giocondo, a Venetian architect, and the château of Anet, to which I have already alluded, fragments are preserved in the court-yard of the Ecole des Beaux Arts at Paris; and of some I have this evening offered you a more full account.

In considering these fine monumental palaces, perhaps one of the most striking features is the staircase. It was a feature which had received considerable attention from the later mediæval architects. All of them are constructed on the principle, no doubt derived from the earlier turret staircases, of a central newel. There is a well-known instance in the Flamboyant style of a beautiful wooden staircase leading to the organ gallery at the church of Saint Maclou, at Rouen, and another, not perhaps quite so well known, but which is a most elegant and elaborate effort both of taste and construction, a stone staircase in a house situated very near to the cathedral of Strasburg, the design of which, with very excusable gallantry, is attributed to the daughter of the architect of the mighty cathedral: it is a work indeed requiring the utmost precision and nicety of constructive skill, whilst it is exuberant in fancy and decoration. We have also the two staircases of the Cours de Louis of Louis XII. and several other examples might be cited. The staircases of the châteaux we have been considering are, however, generally of larger proportion than the earlier works referred to, and at Chambord the architect has indulged his taste by building no less than thirteen staircases. One of the noblest external staircases with which I am acquainted, I believe the very noblest, is that at Blois: the spiral turn of the stairs is adopted as the leading feature of the design, to which all the rest is subservient; and whilst there is considerable massiveness and solidity of construction, the octangular form of the building and the inclined lines of the staircase intersecting give a remarkable playfulness to the design, and the great beauty of the sculptured decoration adds that prevailing grace which is one of the chief characteristics of the architecture of this epoch. The central internal staircase at Chambord, circular on plan, is also a very fine work: it is of considerable size, being 30 feet in diameter, and there is a double flight, one under the other. The central newel is not absolutely solid, there being a hollow core, which extends from the ground level up to the upper part of the beautiful central turret of the château. The double flight ceases at the level of the terrace, and a single flight continues to the upper part of the central turret. The decoration of the staircase is admirably carried out, the various capitals of the flat pilasters, adapting themselves to the horizontal and inclined lines of the entablature which they support, are all beautifully wrought. The angle staircases in the court-yard, of a somewhat later date than the central staircase, surrounded with open colonnades and crowned with dome-shaped roofs, surmounted by the fleur de lis, are also elegant compositions.

Certainly, however, the great feature of all these buildings is the roof. Ruskin has remarked, that the first and most characteristic feature in a building is the roof—that the first ingredient of a habitable building is the roof—and it has long been observed how distinctive a feature it is—and how, as a general rule, its inclination may be taken as a proof, if I may so express it, of its original geographical position. Now, in this country and in France, in the later times of mediæval architecture, the roof took a very different growth: with us it grew flat, in France and Germany it grew high and steep. Rickman observes, in his "Styles of Architecture," that in our Late Gothic, one of the distinguishing features is the embattled parapet. The roof had at that time so generally become flat, that some relief and finish to the wall, and, indeed, some breast work or protection to those using it were required; and they coped the parapets of our castles, retaining by tradition, and probably for more richness of effect and diversity of outline, the battlement also, which became so indispensable a feature with our late mediæval architects, that they introduced it as a decoration even on the transoms of the windows. Together with the four centred flat arches they used the flat roofs, and with the flat roofs embattled parapets, and the church towers were built without spires, and finished also by parapets.

Now, in French Flamboyant, that latest and, to my mind, very beautiful school of French art, the proportion became more elongated: the flaming of the tracery influenced the upward growth of the building: the lofty narrow window also caused it to grow in height, and the roof grew with the rest of the building; and particularly on the tower, when spires had also fallen into disuse, the roof assumed almost the inclination, if not the place of the spire, and the conical roofs to the circular angle turrets were in fact true spires, but being somewhat less elongated in form, retained the character of roof. The roof, with its over-hanging eaves, and the cornice which supported it, rendered the parapet unnecessary as a matter of ornament; and as the roofs were inaccessible except by means of ladders attached to the projecting hooks which we so commonly see on the steep roofs of French buildings, the parapets were also unnecessary as a matter of use, and thus in French Late Mediæval work, the parapet is of very rare occurrence: indeed I do not remember any example of it. I allude rather, however, to these features of French architecture, because it seems to explain the tendency to high roofs, which to this day prevails in French architecture; and although they are incongruous when applied to strictly classical architecture, yet they are not so in connection with the particular style of these châteaux, and the extreme picturesqueness which they give wherever they are applied is quite a sufficient reason for their being maintained, and an inducement to harmonize the lower part of the building with the lofty roof, an effort to accomplish which is readily to be observed in many modern French buildings; and, indeed, all that appears necessary to attain this is to develope the predominance of the upward lines of the decorations, and to suppress the importance of the cornice, which in buildings where the roof forms the crowning ornament is not of the same importance as in classical buildings, where the roof is a very subordinate feature, and recurring to Ruskin's observation that the roof is the great feature of any habitable building, the architects of the French Renaissance would appear to have been fully imbued with this principle. I may, before leaving this part of the subject, observe that, although the Italian architects employed at Fontainebleau had introduced and practised a correct proportion in drawing the human figure in the mural and other decorations in this school of design [for such Fontainebleau then actually was] the French artists, influenced by the traditional feeling of the Flamboyant school, actually elongated their human figures, and allowed this tendency to give a marked character to all their works.

Although in the buildings of the time of Francis I. there is a very evident reference to the revived schools of classical architecture, still there is no servile copy: indeed, there is no part of the decoration in particular which does not, more or less, bear a very distinct and separate character from its type. The proportions of all the mouldings of the cornices and string courses at Blois, Fontainebleau, and Chambord, are very much exaggerated, as in Prout's drawings: they are all coarse, and but rude copies of the best Italian work: there is, however, a great vigour gained by this treatment, and the peculiar cornices of Chambord and Blois, although not to be compared in elegance with Italian work of the same time, yet have a rude and massive character which gives considerable dignity to the work. The projection of the pilasters is small: the arch mouldings and architrave mouldings are generally delicate and of better profile than the main cornices and string courses, and the decoration of the capitals and carved panels is of a character often of extreme delicacy, and always of great and peculiar beauty, and there is an exuberant fancy in their varied design. The representation of foliage is perfect, and the best adapted for architectural decoration of any school of art. Cyphers and emblems, figures and animals, are sometimes introduced, but the animal carving does not equal the flowing racy vegetable form of the foliage, and at Chambord it certainly is very inferior.

The buildings of this age are very much ornamented with the emblems and cyphers of their owners; a practice, indeed, which, as to the cyphers, has been continued in France to our day to an extent much beyond what prevails amongst us. The F for Francis, surrounded by the Cord of Anne of Britany, and the Salamander his emblem, and sometimes his motto, "Nutrisco et Extinguo," are common on all the works of his period, whether they are Renaissance, as at Blois, or Flamboyant, as in the transepts at Beauvais. H for Henry, and his emblem the Crescent, also the emblem of his mistress, which he did not scruple constantly to use on the buildings of his reign: at Chambord, indeed, no opportunity seems to have been lost of displaying the royal H and the Crescent interlaced; also the two **G-D** connected, forming H and D; and at Fontainebleau they are even used in the chapel. The Porcupine was the emblem of the ancient house of Orleans; the Ermine of the house of Britany; une Cordelière, of Queen Anne of Britany; and the S, with a Dart through it, was the emblem used for the name of the mistress of Henry IV. Gabriel d'Estrées.

I might allude to other points of interest, and draw some comparison with our own palaces of somewhat similar character but of later date, and remark on the number, great extent, and magnificence of the royal domains I have so inadequately referred to; the use of which, even in imagination, never seems with us to have been contemplated, except in the one instance of Whitehall, of which we possess so noble a fragment. But I now conclude, having accomplished the object I had in view of briefly calling to mind the memory of a well-defined and highly interesting class of buildings.

In the course of the conversation which followed, Mr. Parris, visitor, called attention to the decorations of Fontainebleau, and especially to the frescoes by Primaticcio. When the restorations were commenced there, it was stated by French artists that these works would not resist the action of damp, and he, Mr. Parris, went over on purpose to ascertain the fact. He found that the roof had been completely off, and the wet had penetrated and burst the plastering off the walls, which was lying down split in all directions. He picked up several pieces, and found that the colouring was as perfect as when it was first executed, the plaster having merely been thrown from the wall, but the paint not detached from the plaster. Several experiments had been made with a view to the restoration of the paintings, and the result was that they had been restored with a wax medium, none of the fresco being left. It appeared clearly that it was

not the fresco but the plaster which had failed, by the damp getting behind it; and, with regard to the general question of the permanence of fresco painting, it was satisfactory to know that our plaster was as good as any of that of ancient Rome, and certainly superior to that employed at Fontainebleau. Wherever the walls of a building imbibed moisture from the air, or from the ground, the plaster was liable to be thrown off. This had taken place in ancient Roman buildings, where the lower parts of the frescoes were damaged.

Mr. J. G. Crace, visitor, observed, with reference to Chambord, that he had always thought it could only have been constructed as a place for conviviality, and for the assembly of a large number of persons in the hunting season in one large hall; the other apartments being all of small dimensions, and adapted only for bed-chambers. Mr. Crace adverted to the peculiarly curious arrangement of the double spiral staircase in the centre of this château. With regard to fresco, he had known instances where the action of damp in the atmosphere had affected the colouring and quality of the plaster. In London, he imagined, the lime would attract the smoke, and in forty or fifty years the pictures would become blackened, by absorbing the carbon of the atmosphere, and certainly would not present so good an appearance as those painted in oil, encaustic, or any other vehicle, whilst the dead appearance of fresco might be obtained, if desired, by adopting a proper medium. He considered that polychromy had been very successfully applied to the exterior façade of one part of the château of Blois.

Mr. I'Anson, called attention to a number of black lozenge-shaped ornaments on the exterior of the chimney shafts at Blois. These were singularly effective, though very simple, being merely pieces of slate fastened to the stone work, and not, as they appeared to be, marble inlaid.

Mr. Foggo, visitor, said that Mr. Parris in using the term *plaster*, had adopted the expression which had led the French artists astray. Sulphate of lime was not the proper vehicle for fresco, nor would it endure at all. With regard to the vast expenditure of the French monarchs, it should be remembered that Francis I. lost a battle and his liberty because he was unable to pay his army; and that Louis XIV. brought France to the brink of bankruptcy. A little more discretion, judgment, and good taste, might have enabled these sovereigns to do as much good to architecture, and to benefit the nation still more.

The Chairman (Mr. Godwin, fellow), in proposing the thanks of the meeting to Mr. I'Anson, said it was pleasant to see that gentleman returning, after a lapse of ten years, to his first-love,—to a subject he had already illustrated, and with as much ardour and vigour as before. He (the chairman) would venture to caution the meeting against adopting literally the enthusiastic phrases of the French authors quoted by Mr. I'Anson; for, although Fontainebleau and Blois were exceedingly picturesque and interesting when seen at a distance, they would be found weak in detail upon close examination, and not to be compared with the Gothic edifices upon which their outline was evidently founded. The subject of external polychromy was always interesting, and the recent applications of it in Regent-street by Mr. Owen Jones, and in Tottenham-court-road, by Mr. Lockyer, together with other instances, proved that a strong disposition existed to apply it to modern architecture.

CHURCH-BUILDING NEWS.

Cold Norton.—The new church of Cold Norton was consecrated on 18th ult. It has been entirely rebuilt on the old foundations extended, by the rector, the Rev. W. Holland. The architect was Mr. Pritchett, of Bishops Stortford. The style is decorated Gothic. The plan comprises a nave and chancel, with vestry. There is an oak porch on the south side of nave, characteristic of the county. The church is fitted up with open seats, having sloping backs and close-boarded, to preclude draughts. The chancel has open seats, arranged longitudinally, so as to give a stall-like appearance. The roofs are of open timber-framing, the arched ribs on principals springing from shafts on carved stone corbels. The interior dimensions of the church are—nave 42 feet by 20; chancel, 26 by 13; height from pavement to ridge, 33 feet; height to top of turret, 55 feet. The walls are of Kentish ragstone, with dressings, &c. of Caen stone. The roofs are covered with green slates. The windows are glazed with light green glass, having a border of white at the edges. The west gable is surmounted with a double bell-turret, containing bells, cast by Messrs. Taylor, of Loughborough, from the metal of the former bells, which were not of ancient date, and one of the two was cracked and useless. The turret is terminated with a plain cross, and a lightning conductor of copper cord, with platinum termination, is conducted down into the ground from its summit. Under the floor of the vestry is an arched crypt, approached from the exterior, containing the furnace in connection with the heating apparatus, the whole church being warmed by a simple self-acting apparatus. Mr. W. Brown, of Lynn, was the contractor. The cost of the church is about 1,600*l.*; and it contains sittings for at least 160 persons. The churchyard has been levelled and improved, and the parish have built a boundary-wall next the road.

Bourn.—Improvements have recently been made in the Abbey Church of Bourn. The chancel has been re-pewed and repaired, and the reading-desk and pulpit removed from the middle aisle, the former to the south, and the latter to the north side of the chancel entrance. The pulpit was found to be of carved oak, with numerous coats of paint put on from time to time during two or three centuries, and it is now restored to nearly its original state. The font has been cleared of an accumulation of whitewash, and restored.

Lincoln.—The Above-hill cemetery for the parishes of St. Nicholas and St. John, Lincoln, was consecrated on Monday before last by the Bishop of Lincoln. The ground occupies an acre of land at the east end of St. Nicholas' church, and its cost is estimated at 400*l.* The population of the two parishes is about 1,800.

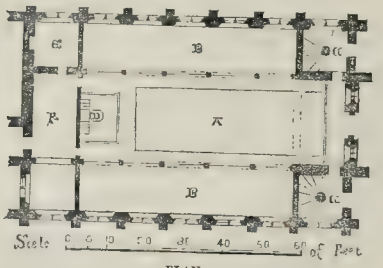
Westcote Barton.—The church of St. Edward, Westcote Barton, according to the *Oxford Journal*, was re-opened on 2nd inst. This church had long been in a sad condition inside, and has now undergone a complete restoration, under the direction of Mr. Street, the diocesan architect. The building has been entirely new roofed. The old walls have been repaired, and where necessary rebuilt, leaving the Norman piers and arches, part of the original church. The old pulpit and chancel screens have been retained and repaired, the latter painted and decorated. The windows have been furnished with new mullions in many instances, and all newly glazed; one entirely new window added in the south aisle. The east window has been filled with stained glass, by Mr. Hardman, of Birmingham. The subjects are—in the centre light, The Crucifixion; on the left side, The Bearing the Cross; on the right, The Deposition. The four smaller chancel windows are also filled with stained glass, consisting of flowered quarries, with badges, sacred monograms, &c. These four windows, as well as the painting of the screen and reredos, are the work of a clergyman in the diocese of Gloucester. The reredos (which, as well as the screen, is at present unfinished) will be of wainscot, painted. The chancel is laid with glazed encaustic tiles, mixed with glazed green and black, and plain red and black. The passages of the nave, aisle, the tower and porch, are all laid with plain red, black, and buff tiles. All these are from Messrs. Minton's. The works have been carried out by Messrs. Franklin, builders, of Deddington. The whole outlay will amount to about 900*l.*

Ruthin.—The Collegiate Church at Ruthin was opened on the Sunday before Christmas-day, after having been closed two months, for restoration. The east window of four lights, with stained glass by Mr. Wailes, is the gift of Mr. John Jesse, of Llanbedr-hall. The lights contain twelve group figures (three groups on each light), which represent various scenes in the life of the Saviour. In the tracery the highest compartment bears a figure of our Lord ascending into heaven, accompanied by Cherubim and Seraphim. The descent of the Holy Spirit is typified by the Dove of Peace. On the sides of the tracery below the figure of the Saviour, are Moses and Aaron, as representatives of the old covenant. The south front of the church has received five new windows of three lights, the masonry being the gift of Mr. F. R. West, M.P.; the glass (by Mr. Powell), of a number of subscribers. On the north wall the stone of an ancient window has been restored, and fitted with stained glass (by the same artist), at the expense of Mr. James Maurice. This is a memorial window of two lights, bearing the figures of Noah and St. John the Baptist. Ruthin Church belongs to the Decorated period of ecclesiastical architecture, in which style the works of restoration have been designed by Mr. R. K. Penson. It is said to be in contemplation to proceed as speedily as possible with the complete restoration of this church.

Sutton.—This church has been undergoing a restoration during the last four months, under the superintendence of Mr. A. Wilson, of Peterborough, architect. Mr. Lee, of East Retford, is the contractor. The amount already contracted for is 1,000*l.* and upwards, exclusive of pulpit, font, &c. There was formerly, at the east end, a flambeauyant window, which had been mutilated by cutting off the whole of the tracery to insert a low-pitched roof: this has been restored to its original features, together with a new window in same style on south side of chancel. The chancel has been restored to its original state by the Duke of Portland. The tomb of the supposed founder of the church was in such a deplorable state that a new one was produced from the old design, and fixed in the north wall where the other formerly stood. The whole of the battlements were once ornamented with pinnacles similar to those now restored at St. Swithin's Church, East Retford; and there was only one of the pinnacles left on Sutton Church to enable the architect to follow out his plan of restoration.

Treswell.—The rectory at Treswell, near Retford, was covered in during week before last, and is in the Gothic style of architecture. The plan was by the architect last named, and carried out by Messrs. Butler and Roberts, of Retford, builders. Mr. Lee, of Retford, executed the stonework.

Manchester.—The new church of St. John, Miles Platting, erected by Sir Benjamin Heywood, at a cost of 3,500*l.* was consecrated on Thursday in the week before last, by the Bishop of Manchester. The church was designed by the late Mr. John E. Gregan, architect, and some progress was made with the building before his death, in April last. Mr. W. R. Corson, architect, completed the work, and supplied some unfinished designs. The church is in the Italian style, and constructed mainly of red brick, with stone string courses, &c. and black brick decorations. In plan it consists of vestibule, tower with staircase, north porch, nave of six bays, north aisle of five bays, chancel of one bay, semicircular apse, and vestry. The chancel bay is recessed on the north side to receive the organ. At the west end is a gallery for children, to seat 200. The extreme length of nave, chancel, and apse is 120 feet 3 inches; width of nave and aisle together, 38 feet 6 inches; and of nave and chancel (which are equal), 24 feet 4 inches; height of nave in centre, 44 feet; height of tower to top of cornice, 81 feet 5 inches. The four nave pillars and four responds in nave and chancel are each in one stone, 2 feet diameter by 11 feet 9 inches high: from their caps spring semicircular arches. The windows and doors, with one exception, are round-headed or round. The west window is a wheel of eight arched compartments, radiating from a central ring. The apse has five windows. At present there is no stained glass, but all the openings are filled with leaded lights of six-sided panes. The chancel and apse are vaulted, in panelled plaster work. In the nave and aisle the roof principals are visible, with plain raking ceiling between. The seats are low and broad, and have low and leaning backs, and no doors. All in south side of nave are free. The church contains sittings for 507 adults, and 200 children. The general contractors were Messrs. Hay, M'Nish, and Co. of Manchester. Messrs. Hollins (mason), Anderson (bricklayer), Heyworth (plumber), and Kerr (plasterer and painter), were the sub-contractors; and Mr. Pedley supplied the heating apparatus.



Coverham (in Coverdale).—The chancel of the parish church of Coverham, in Yorkshire, having recently been rebuilt, the stonework of the several windows was replaced, and it was resolved to fill them with painted glass. Mr. Wailes was selected to execute the four windows, which have now been placed in the new chancel.

WICKER CONGREGATIONAL CHURCH, SHEFFIELD.—MESSRS. WEIGHTMAN, HADFIELD, AND GOLDIE, ARCHITECTS.

The cost of the east window has been defrayed by subscriptions. The window is divided into three lights. The middle one alludes to the labours of Myles Coverdale, Bishop of Exeter, who, in 1535, published an English translation of the Bible. In the centre of the window is a representation of Coverdale's Bible, with the title-page: immediately over the Bible is the passage—"Search the Scriptures." Other parts of the window are ornamented with shields, foliage, &c. Of the three windows on the south side of the chancel, one, which is divided into two lights, is a mother's memorial for an only son. In one light our Lord is represented folding a lamb in his bosom: in the other light our Lord is depicted holding a child in his arms: in a division in the upper part of the window the Holy Dove is represented descending, while beneath the figures there is a broken lily. The other windows are lancets.

A. Nave.
B. Aisles.
C. Stairs to galleries.
D. Platform and pulpit.
E. Vestry.
F. Lecture-room.

PLAN.

WICKER CONGREGATIONAL CHURCH, SHEFFIELD.

THIS church, recently completed from the designs and under the superintendence of Messrs. Weightman, Hadfield, and Goldie, puts in a claim for notice, as an example of consistent application of Gothic architecture to the requirements of a dissenting branch of religious worship.

The building, as will be seen from the engravings, is a parallelogram, 82 feet long by 51 feet wide, divided into a central portion or nave, and side aisles. The aisles are defined by arcades of low Pointed arches, carried on circular shafts, with moulded cap and base; and immediately above the apex of these arches commences a species of triforium, or, in plain English, a gallery, avoiding some of the ordinary objections to such a feature in a Gothic edifice.

This gallery, which circulates entirely round the church, is reached by wide and convenient stairs, occupying the position of the last bay of either aisle at its western extremity, and opens into the body of the building, by means of arches carried by coupled cast-iron columns, with foliage capitals and a single abacus, the mouldings and foliage being treated as metal-work.

A lofty clerestory lights the upper portion of the nave, which has a roof of partly open timbers, with arched principals, giving a total height to the nave of 48 feet. The galleries are lighted by windows which break into dormers, and so avoid the monotony of the unbroken horizontal lines which the exterior would otherwise present, as no tower, or any portion, merely for architectural effect, was permitted. The aisles likewise are lighted by a series of windows entirely devoted to that object; and a large six-light window is in the western gable. The pulpit occupies a raised platform at the eastern end of the nave; and an open gallery behind it is arranged for the organ and choir, whilst a large room, for purposes of meeting, and a vestry, for the convenience of the minister, is obtained.

The whole of the church is seated with open benches, and accommodates from 1,100 to 1,200 persons. The metal columns of the triforium are painted a rich red, the capitals green and gold, with red, blue, and gold on the mouldings. The space betwixt the columns is filled to a certain height with a parapet of wood and metal-work, decorated in colour and gilding.

The total cost of the building, including fittings, architects' commission, and all expenses, was 4,200*l.* of which sum 400*l.* was necessitated by the difficulty of the site, an old stone quarry requiring an average of 16 feet of walling to reach the level of the surrounding roads.

Large schools, to be attached to the church, are designed, and the foundations are already built. Messrs. Ash and Clayton, of Sheffield, were the contractors, and have performed their work in a very satisfactory manner.

WICKER CONGREGATIONAL CHURCH, SHEFFIELD.

TERRA COTTA.*

ABOUT seventy years ago two maiden ladies of the name of Coade, from Lyme Regis, who had devoted their time to the pursuit of scientific knowledge, started a small manufactory of terra cotta at Lambeth, and by dint of perseverance their establishment obtained a sufficient celebrity. This manufactory greatly improved the composition of the materials, so that the modern terra cotta is a very different material from the burnt clay of the ancients, being greatly superior in texture, hardness, and colour. The principal ingredients are white potters' clay, fragments of the best stoneware pottery ground to a powder, pulverized flint, and glass. These ingredients are well incorporated together by means of a pug-mill, and moistened to a consistency stiff enough for modelling and moulding into the shapes required. There is an anecdote extant of the origin of the use of flint in pottery, which perhaps all may not have heard. A potter of the name of Astbury, travelling to London, perceived something amiss with one of his horse's eyes. A hostler at Dunstable said he could soon cure him, and for that purpose put a common black flint stone in the fire. The potter observing it when taken out to be of a fine white, immediately conceived the idea of improving his ware by the addition of this material to the clay. The moulding or statue being formed out of the moist material, considerable care is necessary to allow the process of drying to take place slowly and regularly, the time required depending greatly upon the state of the atmosphere. The same care must likewise regulate the burning, which should gradually increase from a slow heat to an intense white heat: sufficient time must then be allowed for cooling, and your statue, vase, or moulded cornice is complete. It is not necessary to form a statue or anything of a similar nature in a mould, as it can be built up and fashioned by the modeller at his will; but for mouldings and enrichments, of which there is a repeat, a mould is always made out of plaster of Paris.

Let us now consider an important question. Is terra cotta a suitable material to use for architectural purposes? In my humble opinion, it is. We see that ancient examples have stood well; indeed, by the remains of pottery, the limits of the possessions of ancient nations may be accurately traced: if, then, the ancient terra cotta of inferior make to our modern material has braved the destroying hand of time, surely we cannot question its durability. The modern terra cotta has stood a test of seventy years, side by side with stone in the same buildings, and you know the result: the finest arrises and the most delicate ornaments in the terra cotta are as well defined as they were on the day when they came out of the kiln, whilst the stone begins in many places to exhibit uncomfortable symptoms. The following few instances of its successful adaptation may be selected,—the caryatides and mouldings at St. Pancras Church; the rood-screen at St. George's Chapel, Windsor; the figures in the Pediment of Greenwich Hospital, representing the Death of Nelson, designed by West; the vases on the river front of Somerset House; the vases and capitals at Cliefden House; and the statue of Britannia on the Nelson Monument, at Yarmouth. This last-named instance affords a very striking example of the hardy nature of terra cotta, for the stone is giving way rapidly from the effects of its exposure, whilst the terra cotta seems to laugh defiance at the elements. The Phœnix Fire Office testified their approbation of terra cotta, by building escutcheons formed of it into the walls of insured property, but finding it inconvenient to remove the slabs upon the cessation of an insurance, they gave up the practice: you may still see a few about the streets of London.

But let me not here forget to name one remarkable example of the modern adaptation of terra cotta, in Berlin: I allude to the Bau Schule, by Schinkel. Here moulded bricks and terra cotta are used with great success. In Italy, capital examples of the use of terra cotta are to be found in many of the palaces, churches, and houses at Rome, Venice, Sienna, Forli, Milan, Bologna, Ferrara, and Pisa.

The strength of terra cotta is very great. I believe its strength has been tested by the hydraulic machine, that raised the tubes of the Britannia-bridge and that a cubic foot of terra cotta stood a pressure of 464 tons.

Besides the advantage of durability and strength, the use of terra cotta effects a saving in time and expense. Had the bas relief of the pediment of Greenwich Hospital been executed in marble, it would have required somewhere about ten years to have completed it, but this work in terra cotta only required two years. Enriched and moulded work, averaged with plain work, executed in terra cotta, costs from 20 to 30 per cent. less than Bath stone, which is about the cheapest stone in use.

There is an objection often raised by some persons, that you cannot produce a continuous straight line in terra cotta. This may be the case with regard to manufacturers who do not pay sufficient attention to those essentials I have before mentioned, viz. the drying, burning, and cooling, but where these are properly attended to, the difficulty is obviated.

Perhaps some may raise an objection to terra cotta, and say that it is a sham, a mere imitation of stone. I cannot see that it is: the only score upon which you can found this charge is its colour, which assimilates somewhat to Portland stone; but, for the same reason, perhaps, you will discard the use of brass, its similarity in appearance to gold being great. Because two materials have the same appearance it is no reason why you should use the one and reject the other: the reason for its rejection must be of a stronger nature. I think, then, that terra cotta is a legitimate material for building purposes,—legitimate, I say, because I think many materials are not. Stone that easily yields to the weather, and which in London and manufacturing towns, from sundry causes, decays still more quickly than in the country, can hardly be called a legitimate material; for, in the course of a few years, the building in which it is used requires repair: look at St. George's Roman Catholic Church, in the Westminster-road. *Cement* for external decorative purposes, I would banish.

In conclusion—as example is sometimes better than precept, I may name Sir Charles Barry amongst the architects who use terra cotta: he frequently uses it for vases, capitals, &c. and I have been informed that he intended to have executed the crocketted pinnacles of the Westminster Palace in terra cotta, but the original works of the Coades were at that time in not very good hands, although I am happy to state that they are now under good management.

* From a paper read at the Architectural Association by Mr. B. A. C. Herring.

THOUGHTS ON THE RESTORATION OF OLD BUILDINGS.

IT has been urged recently, that the splendid buildings of past ages, when giving signs of the all-destroying power of Time, should not be repaired. With deference to those holding this opinion, it may surely be argued, that if the grand object of all ornamental building be to cherish a love in the human race of the True and the Beautiful; if its chief aim be to *secure* to successive generations of mankind examples of rare excellence in that art whose productions are rationally desired to live longest, there can be no reasonable objection to the supplying to the decaying church or mansion those portions which have been injured or destroyed by age or neglect. For what are such efforts likely to produce but a second harvest of the noble ideas whose seed would otherwise perish? To contemplate, with befitting emotion, greatness in art or in virtue, is noble; but to imitate it is still nobler. To endeavour the exact reproduction of the form of dignity or beauty, which has been the object of admiration, in order that other generations besides our own, or those which have preceded us, may rejoice in its charms, or be instructed by its science, is surely neither insolent presumption nor degrading mimicry.

It must of course be understood that the eyes and hands employed to execute important and delicate tasks are prepared, by sufficient study and careful practice, for their duty; that taste has been manifested for the production of good copies of stonework; that original powers have also been to some extent manifested by the intended history; and these conditions, we venture to think, may very probably be found in the rising race of architects and workers in stone. Suppose a gentleman of England to inherit a mansion, in which the pure and elegant taste of a long line of illustrious ancestry has been displayed, and this, in combination with the labour and skill of the workman and architect of their day: suppose that for any length of time he has been deprived of this inheritance, and decay has in consequence gnawed at the marble mantelpiece and the tesselated pavement; that the noble oak roof exhibits the effects of rains and wintry blasts, and the oriel window has parted with its delicate tracery;—surely no one will lecture him upon the folly or presumption of restoring, according to the clearest views he can obtain from the portions still in existence, the parts that have suffered injury. None will counsel him, rather to build another dwelling for himself, on the same model if he likes, but still *another*, lest he should not succeed in producing complete harmony in the structure by his repairs. The same views may be urged with regard to the ancient churches of England. Many of them may for a long period have been unkindly neglected, while diversities of church discipline and manifold dissenting communities have risen up in consequence of that spirit of inquiry, which no ecclesiastical or political system can ever silence or restrain. The edifices which were consecrated to the Episcopal forms have been regarded with coldness or disdain. They seemed no doubt to many eyes to be allied to superstition, to bigotry, or to formalism. They were unvisited by the greater number in their respective parishes: they were, in short, deserted for those places of religious instruction where it was believed a fuller Gospel was preached, a holier man presided, or a more generous zeal was manifested. We cannot blame such wanderings of the popular mind in search of the way to life eternal, for often it was not the *diseased* love of change, but the healthy thirst of the soul after the satisfying waters of truth that caused them. Nevertheless, we may be permitted to regret that the solemn temples dedicated to the worship of the Christ of God suffered from such defections. A reaction comes: a spirit of holy emulation is infused into the Episcopal body: bishops and beneficed clergy are awakened to their high responsibility. They look around the churches long deserted, and find again a congregation waiting eagerly to hear the tidings of salvation. They observe it with delight,—a delight, however, not unmixed with grief: the decaying walls, the defaced corbels, remind them of the times of desolation. "We will restore," say they, "in the spirit of our founders. We will repair the font, and infancy shall again receive beneath the hallowed roof the seal of baptismal admission into the family of God."

And they forthwith enter on the work of repairing the parish church, and restoring themselves at the same time. They are not *new* men: they are men who, having allowed neglect and other evil influences to produce decay in their spirituality, come back lamenting their deficiencies, and supplying them from the *same* principles that formed the strength, grace, and dignity of the ministerial character in all ages.

But it may be objected that while the parish church is being repaired, a new one might be built more agreeable to the taste of modern times. I doubt exceedingly whether the interest in the *new* would equal that in the *old*. As Uncle Toby, from professional sympathy, *liked subordination*, so do the generality of mankind, from far nobler influences, venerate antiquity. A church or cathedral many hundreds of years old, seems to carry on its venerable front an impress of divine protection. Its tower or spire has been guarded from the lightnings and blasts of the storms of ages. If it exhibits here and there symptoms of decay, it also shows how tenderly it has been cared for.

Be it acknowledged that to restore an ancient building, and preserve its unity of appearance, is not amongst the *easiest* of architectural labours: it is one, nevertheless, which must greatly improve the mind and exercise the taste.

Nor does it by any means exclude original conception from its due employment, but would tend, I should think, in the way of *study*, greatly to advance its development. It cannot, I think, be admitted that the dilapidated and defaced portions of an edifice are in this respect to be compared with the deficient parts of a poem. It may or may not be possible to conceive what has been *written*, so as to produce unity and congruity in the old and the new, and to accomplish the completion of a satisfactory whole; but it *is* possible, quite possible, to imagine what was built, and, if the restored parts be not like in every slab and mullion, to produce such probable resemblances as to establish a general harmony of the fabric. S. E. MILES.

PROVINCIAL NEWS.

Cheshunt.—A range of buildings, including schools for children of both sexes, and dwelling-house for a master and mistress, is about to be erected in this parish in connection with the British and Foreign School Society. Mr. George Ralph has granted a piece of land, known as Love-acre, as a site for the school premises, and this, with the state of the subscription-list, has led the promoters to decide upon commencing the erection of the buildings as soon as the season will permit. Plans have been submitted by Messrs. Habershon, which are approved by the committee. The schools will provide for the accommodation of 180 children. The probable cost of the school-buildings will be 1,000*l.*

Tewkesbury.—The town council have resolved that the resolution passed at a former meeting, that a Corn Exchange be erected by the corporation, be rescinded. It has been resolved to grant a long lease to any company that would undertake to build it.

Worcester.—The new Parochial Schools in St. Clement's parish have been opened. The new building has cost about 900*l.* all raised except 80*l.* or 90*l.* Mr. H. Day, of this city, was the architect employed. The builder was Mr. J. Heming, of Lowesmoor. The material of the walls is brick, with stone windows and dressings. The building is in two stories, the lower for girls and infants of both sexes, and the upper for boys. Each floor has a large school-room and class-room. The ceiling in the boys' school is partially open, and the beams are dressed and stained. According to the Diocesan Society's estimate of space requisite for each pupil, namely, 6 square feet of floor, the schools will accommodate about 300 pupils.

Cardiff.—The Cardiff Sailors' Home was opened last week, according to the local *Guardian*. The building is in the Elizabethan style, from a design furnished by Mr. Roos, of London, architect. The material is stone, faced with jointed stucco. There is a central part, with an east and west wing. The dimensions of the two wings are 60 feet by 38 feet 6 inches, and the central portion of the edifice 83 feet by 34 feet 6 inches. The central portion of the building is surrounded by a turret. The internal height of the building from the basement to the centre of the roof is 50 feet. There are three distinct tiers or galleries ranged one above the other in the central portion of the building, so as to form a parallelogram. These galleries or corridors extend on all sides, being reached by a flight of twelve steps in a winding form. The cabins for the seamen, together with several washing-rooms and store-rooms, are ranged in lines opposite each other on the north and south sides of the central building, with railings or balustrades 3 feet in height in front. The whole is lighted by means of six large skylight windows. The upper portion of the east wing is set apart for the accommodation of the superintendent, and for spare sitting-rooms; while the opposite wing comprises galleries only, and is supplied with cabins. Each tier contains about thirty cabins, and including those in the west wing, there are 109 cabins, averaging 9 feet by 5 feet 8 inches, and 7 feet 6 inches in height. The building contains a large dining-room, working-room, kitchen, baths, and various other conveniences, such as skittle-alley, shed, &c. Mr. Griffiths, of Cardiff, was the builder.

Barnsley.—New schools have been erected at Thurlstone, in the parish of Peniston, for fifty boys and fifty girls, and also one for 100 infants, with a house for the master. The cost will be upwards of 650*l.* The site has been given by Mr. J. C. Milner. The plans, &c. were furnished gratuitously by Mr. George Leather; and the work was performed under the superintendence of Mr. Hugh Tomason.

Carlisle.—The new schools at Hall-bank Gate, erected for the children of colliers and lime-workers, in the neighbourhood, at the joint expense of Lord Carlisle, and the Messrs. M. Thompson and Sons, Kirkhouse (his lordship's lessees), were opened on 31st ult. The building comprises a master and mistress's house, and a school-room, 66 feet long by 16 feet broad, designed by Mr. Beaty, architect.

Edinburgh.—It is intended forthwith to complete the pathway on the east side of the National Gallery, and remove the paling along the west side. The ground inside the railings will be laid out in terraces, and on the east side there will be a pathway 12 feet wide, leading up to Bank-street, by flights of stairs. East of the footpath, the ground will slope downwards to Princes'-street-gardens, and the town council will be asked to give up a small portion of these gardens required for this slope. It is proposed to place gates on the footpath, a course to which the *Scotsman* anticipates some objections.

Glasgow.—In respect to new buildings in prospect, the *Glasgow Gazette* says;—besides the new Free College Church, there is to be a new one at the west end in connection with the establishment. The preparation or competition plans for the west-end-park church have been confided to Mr. Rochead, of this city, and the Messrs. Hay, of Liverpool. The expense, we understand, is to be restricted to 8,000*l.* A new United Presbyterian Church is also on the *tapis*. The site is the head of Hospital-street, and we have heard the estimated expense given at 6,000*l.* There is immediately to be a Free Church Mission church in Finnieston. The Renfield-street church congregation are on the look-out for a site for a new church. The warehouses which are to be erected where the Renfield-street Free Church at present stands will be on the scale of magnificence which has of late been adopted by our great commercial establishments. Another range of palatial warehouses is projected at the corner of St. Vincent-street and West Nile-street; another at the corner of West George-street and Buchanan-street, as a *vis-à-vis* to the range where M. Pippett holds his daily ordinaries. A fourth block of buildings is in contemplation in Argyll-street, opposite Queen-street.

Craignoon (Fife).—It is proposed to erect a new harbour at Craignoon. The estimate of one plan is above 14,000*l.*; and allowing the Board of Fisheries to approve of the undertaking, and give their usual grant, it would still leave a large sum to be raised by the community. The Cellardyke fishermen, however, have resolved, according to the *Fife Herald*, to take steps for the erection by an endeavour, during 1857, to raise 1,000*l.*—each boat's crew paying so much per week.

Jersey.—The contractors for the Le Sueur monument, have fixed the crowning stone of the monument, according to the *Jersey Times*.

LECTURES AT THE ARCHITECTURAL EXHIBITION.

ON Tuesday evening last Mr. James Fergusson inaugurated the lectures to be given in the Suffolk-street Galleries by a lucid and agreeable discourse on Ancient Assyrian Architecture. There were probably from four to five hundred persons present, and we were glad to hear that nearly 600 season tickets have been purchased. In opening the course the lecturer said the great object the committee had in view was to bring the public and architects into nearer acquaintance with each other: the architect differed from the painter in this one point—that the painter had only to buy a few materials, at slight expense, and exhibit his work finished for purchase, whereas the architect could do nothing without a patron who had a large capital with which to carry out a design that would otherwise rest useless in the designer's portfolio. The committee considered that the most obvious way of instructing the public in architecture was by an exhibition; and, as the great mass of technical drawings did not tell any story to the public, the committee thought, by making lectures part of their plan, by adding oral to pictorial details, they might aid in obtaining a public able to discriminate in architecture.

Our readers are already in possession of Mr. Fergusson's views on Assyrian architecture, and of the greater part of the information which he placed ably before the meeting on this occasion: we, therefore, need not recapitulate.

We are forced to postpone the continuation of our notice of the works exhibited, but shall return to it shortly.

PRESERVATION OF WOOD CARVINGS.

AT the last meeting of the Institute of Architects, Mr. W. G. Rogers exhibited some specimens of Gibbon's carving, from Belton House, Lincolnshire, and gave the following explanation of his method of strengthening and preserving the parts remaining, after the lime-tree wood of the interior had been reduced by the worm to a mass of honeycomb fibre.

Photographs of the carvings were taken before the ornament was removed from its place: the wood was well saturated with a strong solution of corrosive sublimate to destroy the worm (the natural colour was afterwards restored by a further chemical process), and strength was then given by injecting vegetable gum and gelatine: the separate pieces were afterwards put together according to the original design preserved in the photograph, restoration with new work being as much as possible avoided.

Mr. Rogers stated that similar carvings at Burleigh, Chatsworth, Petworth, Cashiobury, Hampton Court, Windsor, Trinity College Cambridge, and other places, are in the same state of decay, the surface or skin being covered with a deceptive white vegetable bloom, which assists in completing the work of destruction. It is desirable that these should be examined forthwith.*

PREMIUMS FOR CARVING AT THE ARCHITECTURAL MUSEUM.

IT will be remembered that the committee of the Architectural Museum, in June last, offered a premium of five guineas for the best specimen of wood carving which should be forwarded to the museum by a certain date; that Mr. Ruskin offered a prize of the same amount for the most successful specimen of stone carving, in the shape of a Gothic capital, exhibited there at the same time; and that Mr. Godwin offered a small supplementary premium for the second best in each class. In reply, five specimens of stone carving, by four art-workmen, and six specimens of wood carving, by six art-workmen, were forwarded. One of the first-named specimens, a large capital of Venetian Gothic character, came from Ireland without any name or address. The other competitors were George Galpin, whose capital exhibited between conventional foliage on four sides that number of groups illustrating the parable of the Prodigal Son; W. Sandilands, a smaller work, wherein palm-trees form the foliage, and a scriptural allegory is set forth by groups between the stems (ruder and less learned than the last, but more original), and W. Farmer, who sent two specimens, formed, one of the vine, the other of the rose, ivy, maple, and vine conjoined. The wood carvers were W. Forsyth, whose panel was made up of birds and vine-leaves, arranged according to rule, and very beautifully cut; John Baldwin, a rough study of holly from the plant, arranged by himself, and cut with great vigour and power; J. B. Wallace, a study from the thistle; S. Chadaway, a renaissance design, including a boar-hunt as a centre,—meritorious in several respects; Burgess Reeve, of Edinburgh, a more finished furniture piece, representing a hound; and H. Wilcock, who sent a Puginesque panel in low relief.

The decision was come to on Monday last, when the first prize for stone capital was awarded to W. Sandilands, the second to George

* At the next meeting of the Institute, to be held on Monday evening, the 17th instant, a paper will be read "on the Formation Methods of casting, and ringing of large Bells; with some Suggestions on the Subject;" by Mr. C. H. Smith.

Galpin; the first prize for wood carving to John Baldwin, and the second to W. Forsyth. There were present Lord A. Compton, Sir Francis Scott, Messrs. Ruskin, Scott, Penrose, Christian, Cocks, Pearson, Chantrell, Clarke, the Rev. C. Bowtell, Clutton, honorary secretary, and Allen.

The prizes will be given in the middle of April, at the opening meeting of the session.

Some prizes of larger amount will be offered hereafter.

CORK SCHOOL OF DESIGN.

THIS institution was to reopen on the 8th instant; or rather, a new School of Design, raised upon the foundation of the late school, was to open on that day. The late school was closed in December, 1854; the head master having thrown up his appointment, and the second having been transferred to Marlborough House, while the committee, after maintaining a somewhat angry correspondence with the Board of Trade, gradually ceased to perform their functions. Things were in this state when the passing of the Irish Museums Act empowered the levying of a rate for the support of Schools of Design; and a public meeting having in October last unanimously agreed to carry out the provisions of the Act, a committee was nominated by the town council, comprising a few of the members of the old committee. Mr. Raimbach, late master of the Limerick school, was appointed head master, and Mr. Edward Shid assistant. The school opens with the announcement that a scholarship of 10*l* and two of 5*l*. each, are to be given by the mayor, Wm. Fitzgibbons, esq. and one of 10*l*. by the committee; and a prize of 5*l*. is offered by a member of the committee for the best design for the Cork School of Design Prize Medal.

Local scholarships and prizes are a new feature in the Cork School of Design, in which hitherto they have not been given; but it is to be expected that the emulation thus incited will call forth increased exertions from the students.

THE STATE OF LONDON STREETS.

I REMEMBER a few years since the editor of an Edinburgh journal publishing some severe strictures on the filthy condition of the streets in the metropolis. Many who knew the failings of famous "Auld Reekie" were surprised and rather indignant at complaints coming from that quarter. Such things, however, ought to cause those authorities in whose hands the credit for the cleanliness of London and its miles of suburbs is left, to exert themselves in such a manner that some may not one of these days compare this capital city—the wonder of the world—with Rouen, Naples, or some of those Asiatic towns, respecting the condition of the streets of which we have been lately enlightened by travellers.

I would not willingly acknowledge that we are nearly so bad as a large part of "Edinburgh toun," and yet am obliged to confess that in this dim, muggy weather, we are in a shameful pickle. They talk of doing away with the crossing-sweepers, but what in the world should we do without them, unless the *boards*, who ought to see after the pavement, do something more than at present. It is a grand thing that the old cry of "Clean your honour's shoes," which was so familiar in those days when sedan-chairs, broken pavements, water-spouts, and other drips, rendered them one of the necessaries of London life, has been revived by the boys in red and other colours who so vigorously ply their brushes.

The greasy state of the pavement, and the deep mud of the centre parts, scraped to the kerbs in heaps to trap the unwary, stop my progress, irritate my temper, and spoil my clothes. Bad as is the condition of the lords of the creation in this weather, it is infinitely worse for the ladies. I scarcely wonder, under the circumstances, at an attempt having been made to introduce Bloomerism. Only yesterday, in walking up Gray's-inn-lane, I was fortunate enough to be the means of preventing two respectable females from slipping down. This I did at some risk to myself, for the footpath was nearly as slippery as a skating-place on the Serpentine.

In the evening, the mud on the foot pavement assumes a more inconvenient consistency, and many hundreds who have attempted to walk home from friendly parties or the theatres at this New Year's time, will agree with me as to the difficulty of getting along. It is, perhaps, invidious to mention places, but take as a specimen the road from New St. Pancras church to King's-cross, along the side of the church railings. Good people in this slippery time scrape and sweep the fronts of their houses and shops daily, but what is the advantage if a great majority neglect?

In conclusion, I submit that in order to prevent the shameful comparison which I have hinted at, we must set vigorously to work to cleanse the London streets. If the authorities neglect the roads, the inhabitants must see after them; and if housekeepers neglect their duty to the public, they ought to be looked up by the police.

A COCKNEY.

RESULT OF THE COMPETITION FOR THE DUDLEY WORKHOUSE.

IN the Birmingham papers of April last appeared an advertisement for plans, &c. for a workhouse at Dudley, to accommodate 600 inmates, at an outlay not exceeding 12,000*l*. Some fifteen designs were sent in, but in consequence of another advertisement limiting the commission to 4 per cent. a meeting was held in Birmingham, when it was resolved to lay the matter before the Birmingham Architectural Society. This, however, took place too late for any energetic step to be taken; but the competing architects present resolved not to undertake the erection under the usual commission. Among the competitors was an architect and auctioneer of West Bromwich, who, finding all the respectable men withdraw, unless at a remunerative price, undertook to carry out the work. Having offered a premium for the *second* best set of plans, the guardians, after consideration, gave the same to a Wolverhampton firm, Messrs. Bidlake and Lovatt. The design of the West Bromwich auctioneer was forwarded to the Poor-law Board, returned with upwards of forty folio pages of suggestions for alterations and amendments, and finally, to test the feelings of the builders, the matter was thrown open for public competition. Our architect, having priced the quantities, found they came out—at least so we must presume—somewhere near the advertised amount. But, either Messrs. the builders tendering, or the licensed appraiser of West Bromwich knew but little of the value of materials and labour, for, behold! the tenders turn out: No. 1, 23,022*l*. 14s. 8d.; No. 2, 30,700*l*.; No. 3, 28,702*l*.; No. 4, 22,690*l*.; No. 5, 24,938*l*.; No. 6, 24,477*l*. 3s. 8d.; No. 7, 29,868*l*.; No. 8, 27,499*l*. 4s. 9d.; No. 9, 33,270*l*.; and No. 10, 30,484*l*. The average of the ten is 27,565*l*. 2s. 3½d. The difference between the *highest* tender and estimated cost, is 21,270*l*. and between estimated cost and *lowest*, 10,690*l*."

Mr. Griffiths, who, on the part of the Building Committee, read the report, added, that the architect who attended the committee could not account for the difference, and left the committee with an understanding that he would again go through his estimate. This he does, and states that he can make a difference of 3,000*l*. or 4,000*l*. without *materially* altering the plans. That, however, brings the cost to 18,690*l*. or more than 50 per cent. above the amount originally set forth; and it would appear that this gross outrage on the rights of the architectural profession, is to be allowed, for hints are thrown out, and the clerk, in reply to a question, states that the Poor-law Commissioners did not bind them to 15,000*l*." The guardians can borrow *any amount*, the commissioners' sanction being first obtained.

This result, I should imagine, after the many letters you have received on the subject of this competition, will open the eyes not only of the profession, but of the public at large; and I trust it will have a tendency to bring about the much-to-be-desired arrangement of the choice of referee of competition plans by the competitors themselves.

ARCHITECTUS.

CHAMBERLAIN'S BRICK-MACHINE.

In this machine the clay is fed into a horizontal pug-mill, which carries it through a cylinder working the clay, and forcing it out in one continuous stream through an oblong aperture, somewhat the shape of a brick with round corners, it being a fact known to those connected with brick machinery, that so large a body of clay as 50 inches cannot be expressed through an aperture with sharp corners to make the edge of the brick, the angles causing so much more friction than any other part: it has therefore been the practice with this class of machinery to perforate the aperture, or make hollow bricks, that the tongues to form the perforations may cause such friction or resistance in the centre of the escaping aperture as to force the clay into the corners, and thereby in some measure meet the difficulty; but this is again balanced by the extra expense required in the preparation of the clay, as, if not of the finest quality, it will not pass the sharp corners smooth. To obviate these difficulties in this machine, the aperture delivers the clay with round corners, which is then received between four rollers, covered with porous fabric, which compress the block of clay into an oblong mass, the size and shape of a brick edgeways, with sharp arrises. The stream of clay is then carried on an endless web to the self-acting cutting-frame, which, as the clay moves, is put in motion from connection with the four rollers which form the block of clay, the rollers being driven by a belt from the gearing of the pug-mill. If the rollers have the slightest motion given them from the machine being fed with clay, the wire is put in action and traverses at an angle in the same direction in which the clay is travelling, thereby making a square cut while in motion. As soon as the wire has cut off one brick, it changes its action and cuts off the next at the opposite angle to which it before traversed. The bricks pass on to the end of the machine, and are received on pallet-boards by the boys in attendance. The advantages of this machine, according to the patentee, are as follow:—1. That the clay is thoroughly amalgamated in the pug-mill with some clays requiring scarcely any previous preparation. 2. That the bricks are made of such a stiffness as to bear walling six high at once, which effects a saving of 50 per cent. in floor room. 3. That bricks of greater density are obtained through the great pressure the clay receives during manufacture. 4. From the stiffness of the clay used, less water has to be evaporated in drying, saving one-half the time required for hand-made bricks, and the risk of loss from bad weather, &c. 5. The machine is on one frame and portable, of the most simple construction, very strong, and not likely to break or get out of order. 6. By this machine 2,000 bricks can be made per hour with from two to four-horse power, depending on the stiffness and quality of the clay.

OUR NATIONAL ANTIQUITIES.

WE are informed that Mr. A. C. Kirkmann (well known to all who knew the late Sir S. R. Meyrick), has *revoked* his resolution to give his fine collection of Celtic, Roman, and other antiquities (found chiefly in the Thames), to the Mayor and Corporation of London, on account of their declining to take Mr. Roach Smith's Museum; and he has now provided for it elsewhere. Those who know the collection, say that it is in some respects the best in England. He has some objects which, if put up to sale, would fetch almost fabulous prices. It will be remembered that the trustees of the British Museum lost Mr. Wylie's collection of Saxon remains, from declining to take the Faussett collection. The hitherto unpublished manuscript account of this now celebrated Faussett collection of antiquities discovered in upwards of 500 Anglo-Saxon tumuli in Kent, from 1757 to 1773, is about to be published under the editorship of Mr. Charles Roach Smith. It is to be fully illustrated with twenty engravings and 200 woodcuts, made expressly for the work, under the direction of Mr. Fairholt, from the originals, now forming part of the museum of Mr. Joseph Mayer, of Liverpool. Subscribers are to have the volume for two guineas, a price, it is said, much more moderate than any similar work has ever been printed for. The public are indebted ("over the left") to the British Museum authorities for the opportunity of thus acquiring, as it were, duplicate copies of this curious collection: for had these authorities purchased it, as they ought to have done, the "unpublished manuscript" never would have reached the public in the form about to be realized. Her Majesty has become a subscriber, and the subscription list is now swelling out into considerable dimensions.

CHIMNEY-SHAFT, &c. AT COLTNESS.

SEEING our notice of the chimney-shaft built at Woolwich Arsenal, a correspondent sends us the following particulars of a chimney-shaft built by Mr. Thomas Dean, at the Coltness Ironworks, for Mr. Henry Houldsworth, Manchester:—

At the ground level it is 18 feet 6 in. square; at top of shaft, 10 feet 6 in. square. The first 25 feet are 3 feet 4 in. in thickness; the second 40 feet, 2 feet 11 in.; the third 50 feet, 2 feet 1 in.; the fourth 50 feet, 1 foot 8 in.; the fifth 45 feet, 1 foot 3 in. It has also a fire-brick lining 10 in. in thickness 25 feet high. The number of bricks used was 270,000.

Four bricklayers built it in thirty-eight days in the months of October and November. It was built, like all the chimneys in that part, from the inside. The usual day's work there of a bricklayer in building a chimney is, say 8 feet square at the bottom, 5 feet on the top, and the price paid them for labour only 2s. 6d. per foot rise.

The same builder is putting in an engine-seat of bricks for the same company, which will take 750,000 bricks. The engine is about 400-horse power. Both Mr. Houldsworth and Lord Belhaven have been boring there, and have found on both their estates an extensive quantity of ironstone of great thickness and of superior quality; and Wishaw is becoming, from a small weaving village, to be one of the most populous towns in Lanarkshire, and is now made a parliamentary borough. Mr. Houldsworth is also building a large number of convenient cottages, to see if he can alter the condition of the mining population, and also a large school to hold 600 boys and girls. His liberality, we are told, is very great.

Notices of Books.

Handbook of the Arts of the Middle Ages and Renaissance, as applied to the Decoration of Furniture, Arms, Jewels, &c. Translated from the French of M. JULES LABARTE; with Notes, &c. London: Murray, 1855.

ART is exhibited, as M. Labarte remarks, not only in architecture, statuary, and monumental painting, but in jewels, arms, furniture, and ecclesiastical utensils; and even objects of common use bear testimony with these to the artistic talent of ancient times, and to the character of the epoch of their construction.

It is of art, as applied to the objects of domestic life, that this very interesting volume treats. It gives a history, more or less complete, of the origin and development of the decorative arts during the Mediæval and Renaissance periods; and this apparently very fair and faithful translation of M. Labarte's valuable work by a lady forms an acceptable new year's gift to the public. It comes to us stamped with the approbation of French antiquaries and artists; and M. Labarte himself has in a manner homologated the present translation, by giving the translator the use of the woodcuts belonging to his work: to these have been added many other interesting illustrations, for which thanks are accorded to Lord Londesborough and other proprietors of valuable antiquities.

The volume opens with an extended notice of the sculptures of the Middle Ages and the Renaissance, to which we will again refer. The second chapter is on their Painting and Calligraphy; the third on Engraving; the fourth on Enamels (a long and elaborate account of them). Chapter fifth is on Damascene work; the sixth on the Lapidary's Art. The Keramic Art, in the ensuing chapter, forms a pretty long section of the work, and is followed by one on Ancient Glass. Chapter tenth is on the Armourer's Art; eleventh (a very brief one), on the Locksmith's Art. Next follow some remarks on clockwork, and an account of ecclesiastical and domestic furniture. This closes the first, and, indeed, by far the largest "Part," or nearly the whole of the volume. The second Part is merely indicated, comprising, as it does, a single chapter on Oriental Art, in which attention is specially drawn to this interesting subject more as a desideratum than with any pretence of giving an account of either ancient or modern art in the East.

Sculpture, as we have already noted, constitutes the first and one of the more extended subjects of M. Labarte's very pleasant volume, —sculpture in ivory, metal, wood, stone, wax, &c.; but, it comprises little or nothing as to the greater works of sculpture, which, indeed, could scarcely with propriety be included in a treatise devoted to art as applied to the decoration of furniture, arms, jewels, &c. Nevertheless, in treating of the fine arts as applied to domestic use, the first place is with propriety conceded to sculpture. "In all ages," remarks M. Labarte, "the custom has prevailed of adorning, with chiselled or carved figures and devices, both household and sacred vessels, domestic furniture and weapons." But why exclude from a prefatorial remark such as this, as well as, indeed, from more special consideration in a work of this kind, those more strictly architectural sculptures with which every race of men, civilized or semi-civilized, and even savage, have delighted to adorn both their domestic establishments, and the temples or churches devoted to their gods?

Previous to entering into detail on the subject of the sculptures of the Middle Ages and the Renaissance, the author gives a rapid sketch of their progress throughout, of which we shall endeavour in turn to give a brief outline. Though the earlier centuries of the Middle Ages have bequeathed to us scanty relics of monumental sculpture, they afford us numerous specimens of the art in its application to mobilia. These consist chiefly of the tablets of ivory obtained from diptychs, or the covers of rich manuscripts. The tenth century furnishes us with no specimens of articles of domestic use. No sooner, however, had the year 1000 closed in safety, and the dawn of a new century restored confidence to men's minds, than a wonderful activity was manifested by all classes. It was more especially in sculpture that the transformation displayed itself. To the regular conceptions of the ancients succeeded all the fancy of a new school emancipated from rules, and knowing no other bounds than those of the artist's imagination. This independence involved the artist in all the errors of inexperience. He began to practise upon mouldings, the archivolts of arches, and the corbels of capitals, on which the human face was often represented in the most grotesque and incorrect manner.

It was hardly till the commencement of the twelfth century that bas-reliefs and statues of large proportions were executed in a style which, without being free from faults, was at least restored to some measure of correctness. The Byzantine influence is here very perceptible. Long attenuated figures, a total absence of life, a severe and solemn expression, draperies arranged in small and close parallel folds, and an overloading of Oriental ornament in rich stuffs fringed with pearls and enriched with precious stones,—these form the chief characters of the statuary of the twelfth century.

The adoption of a contemporaneous costume is also a distinctive feature of the new school of art, which had its rise in the eleventh century. The figures of Christ, of the Virgin, of the Angels and Apostles, still retained the flowing robe and ample mantle of the ancients, but all the others were clothed in the dress which the artist had daily before his eyes: the arms, utensils, and furniture of his own times were introduced into his compositions, whatever might be the age or country to which his subject belonged.

From the close of the twelfth century, great progress was made in statuary. Up to that period the similarity of the faces leaves no room to doubt that the artists had some received model from which they uniformly copied, but they now began to lay aside this servile imitation, and gradually adopted a more natural style: their ornaments were borrowed from native plants: the design was improved without the style of sculpture losing its originality.

We remark, from the beginning of the thirteenth century, more of ease and movement in the attitudes, and expression in the faces, while more ample draperies were arranged with taste and elegance. At the end of this century, France possessed an original style of art, in nowise indebted to that of the ancients or to that of the Byzantine school: the cathedrals of Chartres, Reims, and Amiens, contained thousands of statues and bas-reliefs, real masterpieces in point of form as well as of religious expression. The end of the thirteenth century may perhaps be regarded as the finest epoch of mediæval art.

In the fourteenth century, the design is often less pure, more attention is given to detail than is paid to general effect, the draperies are somewhat tortured, the faces of satyrs and grotesque animals re-appear in the ornaments.

To these general characteristics of monumental sculpture in France, Germany, England, and Flanders throughout the Middle Ages, must be added one observation, which is, that during all this period architecture was looked upon as the art *par excellence*, to which all others were kept subordinate. The architect, chief of the artists, not only regulated the plan of the work, but selected the subjects for execution: his alone were the ideas, to which painters and sculptors were to give a tangible form.

The aspects depicted in two of the illustrations of tenth or eleventh century sculpture, associated with these historical remarks, and which are scriptural subjects, now in Chichester Cathedral, suggest, decidedly, a family connexion with the curled and plaited aspects of the ancient Assyrian sculptures. Here is a small thread of connexion which appears to afford us a hint of the possible influence of ancient Assyrian art, even on Western Middle Age sculpture, probably through Byzantine routes. Hitherto a gulph of disconnection has appeared to exist between these extremes, and the sculptures of the ancient Assyrians have seemed to belong to an order of things with which Western or even Byzantine art had no connection. Yet when we reflect on even the geographical relationship of ancient Nineveh, or Assyria, with ancient Byzantium, and even with ancient Judea and Jerusalem, the fountain of scriptural subjects, this can hardly be; and, on the contrary, one would naturally expect that some few traces at least of a species of ancestral influence should be found to exist between art in ancient Assyria on the one hand, and the kindred art, on the other, as it came afterwards to display itself in the less ancient Byzantine or the farther West.

The English version of M. Labarte's volume under notice contains, besides a large number of graphic illustrations, a detailed descriptive list of these, and a numerous list of artists mentioned throughout the work.

Miscellanea.

HORSEMONGER-LANE GAOL.—At the quarter sessions held at Newington, on the 1st January, the justices ordered Messrs. Banks and Barry's plans to be carried out, with some additions, if tenders can be obtained, so that including architects' commission, and all other charges, the sum expended shall not exceed 12,000*l.*

LOST PEALS OF BELLS.—In answer to your correspondent's inquiries about the lost bells of London, I can give some reasons for their removal, though I cannot say what has become of them.—1. St. James's, Westminster. These bells (if they ever existed) were very wisely removed, for the steeple (as viewed from Swallow-street) leans alarmingly to the west. 2. The five at St. Peter-le-Poor may be heard chiming at 10·30 any Sunday morning; at least, I heard them nine years ago; but peals of five they seldom condescend to ring in a peal in London. 3. All Hallows, London Wall, has been rebuilt since 1735, and the five bells either cast into two, or sold for building expenses, a by no means uncommon thing in those days. 4. When St. Martin's was rebuilt, the street was widened so as to allow no room for a tower capable of holding a peal. 5. Which St. Catherine? 6. St. Alphage. Probably disposed of in the same manner as All Hallows, London Wall. 7. Newington Butts has been rebuilt since 1735, and is surmounted by a turret containing three bells, the utmost it will hold. 8. St. Thomas's bells I am at a loss to account for, unless the rats have eaten them as they did at Dunwich, in Suffolk (according to the churchwardens' account); but those rats were accustomed to the cheese of that county, so the story had some appearance of probability. Apropos of bells, their tone depends greatly on their height from the ground, which should never be less than 50 feet: 100 feet is not too much even for the smallest. There is a musical little peal in this town (Colchester), at St. Nicholas, which sounds well from the basements of neighbouring houses, but harsh from the street: they are very old, and one is inscribed "Beata Campana Johannis," the tenor 12 cwt. The little bell at St. Paul's (25 cwt.) sounds to advantage compared with Christ's, Newgate, same weight and note, but hung lower. The famous little bells at Lavenham owe a great deal to their height from the ground, 100 feet; tenor 25 cwt. only. I will send some notes on campaniles on some future occasion.—W. SCARGILL.

NEWCASTLE-UPON-TYNE SOCIETY OF ANTIQUARIES.—The January meeting of this society was held on Wednesday before last, when various donations were presented, and Dr. Bruce read a paper on "The History of Northumberland," and made some remarks on the ancient music and song of the county, in which the Duke of Northumberland had expressed an interest. Dr. Charlton read a paper "On the Runic Inscription on the Cross at Newcastle;" and Dr. Bruce one by Mr. William Dickson, on "Malcolm's Well, Alnwick," of both of which papers the *Gateshead Observer* gives some account. In course of the meeting Dr. Bruce stated that the society having taken considerable interest in the London antiquities of Mr. Roach Smith, which had been offered by that gentleman to the British Museum for 3,000*l.* he might now state that, the owner having consented to a valuation, a valuer had been appointed on each side. The valuer of the Museum had valued the collection, object by object, and without reference to the value of the collection as a whole; and yet, when his figures were cast up, the result was a total sum of 3,500*l.* or 500*l.* more than the price named by Mr. Roach Smith, which was said to be excessive.

INAUGURATION OF THE UNDERWOOD ART-STUDIO AT BIRMINGHAM.—The art-studio to which we have more than once alluded as being established for behoof of students at Birmingham, was inaugurated on Wednesday in last week, by a lecture delivered by Mr. W. C. Aitken, in presence of Mr. Underwood, and a numerous assemblage. At the close Mr. Aitken said that the object of his address had been rather to excite the mind of the student to inquire, than to satisfy it; and after giving some practical advice to intending students, he stated that in the library attached to the Art-Studio will be found many works which might be perused with great profit. The artist, to be a true artist, should be educated in every perception and feeling. Doubtless there had been artists uneducated whose works were admirable; but how much more so would they have been had the mind which produced them been educated up to its capabilities. The claims of the Art-Studio, with its collection of paintings, water-colour, and pencil drawings, its books of ornament, its casts, and library, brought together and dedicated by Mr. Underwood to the extension of art-education, was now before them. The interests of the students of fine and ornamental art had each been duly considered and cared for. In their hands was placed the success and prosperity of the Art-Studio, and shame would it be if, for lack of interest on the part of those for whose benefit it was projected, an institution fraught with so much good, alike to fine-art and art-industry, should fail for want of that support which it so well merited.

STATE OF THE EASTERN COUNTIES RAILWAY.—The public will be concerned to learn, that in consequence of a memorial to the Privy Council from the Norwich corporation, alleging that the line of railway between London, Cambridge, and Norwich, is in a dangerous condition, their lordships have caused the line to be inspected by Lieutenant-colonel Wynne, and that he confirms the truth of the allegations in the memorial alluded to. "The result of my examination of the permanent way," says the reporter, "was to show that, while vast numbers of old sleepers have been removed and replaced by new ones, evidenced by the great piles of old sleepers lying along the line in different places, and which were in a state of decay such as I have rarely met with, numbers yet remain in the line quite as much gone. Although this is a matter of serious moment, it is not so bad as that of the bridges; for the sleepers, though much decayed, have some soundness at the core, and the danger could be met for the time by maintaining a greatly reduced speed over the line. Should the permanent way not be renewed till after the reparation of the bridges is completed, it will be necessary, for the public safety, to prescribe limits to the speed of the trains." The attention of the directors has been drawn to this report by the railway department of the Board of Trade, who urge them to lose no time in giving it their careful consideration.

NEW CHURCH IN WESTMINSTER-ROAD.—It is intended to proceed shortly with the erection of a new church of St. Paul, in Westminster-road, at its junction with Waterloo-bridge-road. The site has been cleared.

APPARATUS FOR PURIFYING AND CARBONISING GAS.—Mr. Samuel Rowlands, of Birmingham, has taken out a patent for a mode of treating gas, consisting of a vessel through which gas is made to pass, in contact with a large surface of the liquid, to the action of which it is to be subjected. In this chamber is a float having a spiral channel, which gives it a slow rotary motion. When it is wished to impregnate coal gas with the vapour of naphtha, the vessel is partly filled with the liquid, which is kept in agitation by the rotation of the float as it sinks. Other carbonaceous fluids may be employed with like effect.

LABOURERS' COTTAGES.—On Friday week, at a dinner given by the Earl of Dartmouth, at Pattingham, to upwards of 120 of his cottagers and labourers, on the safe return of his lordship's brother, Captain the Hon. G. Legge, from the Crimea, the earl, in acknowledging a toast relating to himself, said he did not look on the labourers as mere machines to do set work, but as men possessed of minds, having the same feelings as himself, and immortal souls. It was for that reason that he was building new and improved cottages, that they might learn that self-respect the loss of which was the loss of their independence and the ruin of their morality. No self-respect could exist in the crowded cottage, where there was no division of sexes, no separation of parents from children, but a promiscuous herding together of old and young, male and female. They would now, he hoped, understand and appreciate his motives in making it a positive rule that no such indecent crowding should be allowed in his cottages.

KILKENNY ARCHÆOLOGICAL SOCIETY.—The annual meeting of the Kilkenny and South-East of Ireland Archæological Society was held in the Assembly-room, Kilkenny, on Wednesday week. The hon. secretary stated that the lord lieutenant had done them the honour of consenting to become a member and patron of the society. Other sixteen new members were also elected, exclusive of the Wexford Mechanics' Institute. The annual report was then read. It stated that 128 new members had been added in course of the year, and that otherwise the society was in a most flourishing condition. Some other official business was transacted, and various presentations made and papers contributed.

THE SCOTCH IRON TRADE IN 1855.—Mr. Thomas Thorburn, of Glasgow, in his "Annual Report of the Scotch Iron Trade," says;—"The year about to close, though a year of oscillations, adds another epoch of prosperity to the iron trade. Under the agency and stimulus of war, combined with the extension of railways, gas, and water-works abroad, the exports and home consumption of pig-iron amount to the large quantity of 847,060 tons—exceeding the production by fully 20,000 tons—and are almost equal to the highest of any preceding year. The stocks have consequently undergone a further reduction, and are now only 98,000 tons against 450,000 tons three years ago. Extensive transactions were made during the year in pig-iron, at from 55s. to 82s. 6d.; in rails, 7*l.* 10s. to 8*l.* 15s.; in bars, 7*l.* 15s. to 9*l.* 10s.; in cast-iron pipes, 5*l.* to 6*l.* 15s.; railway chairs, 4*l.* 15s. to 5*l.* 7s. 6d. per ton." Mr. W. Colvin's *Annual Circular*, issued at Glasgow, says;—"During the twelve months we have experienced considerable fluctuations in the value of pig-iron, the price having varied from 54s. to 83s. 6d. per ton; the average for that period being 70s. 9d. for mixed numbers, cash."

NEWCASTLE ENGINEERS' SOCIETY.—The members of this society, says last week's *Gateshead Observer*, held their anniversary dinner at the Wheatsheaf Inn, Cloth-market, on Monday. A large number were in attendance. The chair was filled by Mr. Thomas Wardle. Mr. George Davy assisted as vice-chairman.

"THE GRAMMAR OF ORNAMENT."—Under this title we observe Mr. Owen Jones is about to issue a series of 3,000 examples, from various styles, exhibiting the fundamental principles which appear to reign in the composition of ornament of every period. These will be set forth in 100 imperial folio plates, drawn on stone by F. Bedford, and printed in colours by Day and Son. The intention of the author is to define the apparent origin and trace the development of the several styles of ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles, and those which are peculiar to each. He will further attempt in the 20th chapter to show how, bearing in mind those general laws which he finds also to pervade the works of nature, and returning to her for fresh inspiration, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times, instead of blindly following in the footsteps of the past.

CONSECRATION OF WOOLWICH CEMETERY.—The new cemetery for Woolwich parish, situated about one mile from the town, was consecrated last week by the Bishop of Oxford.

PERMANENT LIQUID GLUE.—A good fluid glue, ready at all times for instant use without any preliminary preparation, is one of the most useful articles of stock with which the workshop can be furnished. To make such a glue, all that is necessary is to melt three pounds of glue in a quart of water, and then drop in gradually a small quantity of nitric acid. When this ingredient is added, the mixture is to be removed from the fire and allowed to cool. Glue so prepared has been kept in an open bottle for two years, still ready for use on the instant.—*Practical Mechanics' Journal.*

PARIS PRIZE MEDALS.—In a paragraph on this subject in the closing number of our last volume, Mr. Hamilton, of Glasgow, was mentioned as having received the Paris gold medal of the second class: we ought to have said Mr. Thomas Hamilton, architect, of Edinburgh.

BIRMINGHAM ART-UNION BALLOT.—The annual meeting of the Birmingham and Midland Counties Art-Union was held at the rooms of the Society of Artists, Birmingham, on Thursday before last. The report announced that this year the Art-Union has been supported to a greater extent than in any similar period since the Institution was re-organised. Lord Ward has consented to accept the office of president for the year 1856. The subscriptions during the year had realised the sum of 409*l.* 10s. The following were the prizes:—One of 50*l.*; one of 30*l.*; two of 25*l.*; two of 20*l.*; four of 15*l.*; ten of 10*l.*; and nine of 5*l.* The report and statement of accounts were adopted.

THE GLASGOW PEEL STATUE.—The committee met lately in Mr. Mossman's studio, and expressed themselves satisfied with the model which had been prepared, and agreed to adopt it, with a view to having it cast in bronze. It is understood that the casting will be executed in London.

FALL OF TWO DWELLING-HOUSES.—At Tetbury, two dwelling-houses in the centre of the town, opposite the White Hart hotel, fell down on Wednesday week. In a few hours the ruins were removed, when it was found that, fortunately, no one had been injured. The houses had been unoccupied for many years, and were in a very dilapidated condition.

THE ARTISTS AND AMATEURS' CONVERSAZIONE.—The meetings for the present year will be held at Willis's Rooms, St. James's, on Thursday, January 24th, February 21st, March 13th, and April 17th. Application as to membership may be addressed to Mr. Henry Ellis, the honorary secretary.

HUTS.—There are now in the course of erection at the Bradford Moor barracks, four huts, the design of Lieutenant-Colonel Stehelin, commanding royal engineer at York. They are of brickwork, 31 feet long by 20 feet wide, with slate roof. The entrance in the end is protected by a porch. Each hut will accommodate one serjeant and eighteen men, with cook-houses, wash-houses, &c. The work has been executed in twenty-one days, by Mr. Samuel Atack Musgrave, of Leeds, under the superintendence of Mr. E. Duley, of the Royal Engineer Department.

PRESERVATION OF WOOD AND IRON.—Messrs. Rey and Guibert, of Marseilles, have invented a composition to preserve wood and iron, called a submarine and preserving coating. This composition is formed of ten parts of sulphuret of copper, two of sulphuret of antimony, and from five to thirty of the best varnish. These matters are ground together like paints, and applied like them to wood or iron.

TENDERS

For building a chapel at Camberwell, for the Rev. W. P. Tiddy. Messrs. Habershon, architects. Rough quantities supplied by Messrs. Habershon:—

	With Benches Circular on Plan.	Ditto Straight.

NOTICE TO SUBSCRIBERS.—A title-page in colours for the last volume may be obtained *gratis*, on personal application at the Office, by those who prefer it to that which accompanied the index in the closing number. Covers for the volume may be obtained at the Office, price 2s. 6d. or the publisher will bind it for 3s. 6d. The complete volume may be obtained, price 21s.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

NOTICE.

FROM and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *ded* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

ASSISTANT CLERK, BOOK-KEEPER, and COLLECTOR of PRIVATE IMPROVEMENT RATES. WOOLWICH, KENT. The Woolwich Local Board of Health will meet at the Town-hall, William-street, on TUESDAY Evening, the 29th JANUARY instant, at SEVEN o'clock, to elect a person (whose whole time will be required) to fill the above office. The remuneration to be Two Pounds per week. Security in two sums of 200l each. Applications to be made in the handwriting of the respective candidates, and sent under cover to me at this Office on or before TWELVE o'clock on SATURDAY, the 26th instant. The nature of the duties may be ascertained on personal application daily between TEN a.m. and TWO p.m.

By order of the Board, EDWARD SARGENT, Clerk.
Office of the Woolwich Local Board of Health,
William-street, 9th January, 1856.

BOARD of WORKS, FULHAM DISTRICT.—WANTED, a SURVEYOR.—The duties of the office will be all those contemplated by the Local Management Act, together with such other duties as may be requisite for carrying out the bye-laws of the Board. Salary, 200l per annum, and the gentleman elected will be required to reside in the district. Applications, stating age, accompanied with testimonials to character and ability, must be sent on or before TEN o'clock on MONDAY, the 21st inst. addressed to Mr. LOVELY, Clerk, Board of Works, Fulham District, 3, Albion-place, Hammersmith. Candidates will be informed of the time when their presence will be required by the Board.

MILE-END OLD TOWN.—The Vestry of this District will meet at the Town-house, on WEDNESDAY EVENING, the 16th of JANUARY instant, at SEVEN o'clock, to appoint a SURVEYOR at a salary of 200l per annum, and an INSPECTOR of NUISANCES, at 23s. per week, who will have to perform the duties generally required of them under the Metropolis Management Act.—Applications with testimonials, directed to the "Chairman of the Vestry," must be forwarded to this office, before TWO o'clock, on WEDNESDAY, the 16 th instant. Any further information may be obtained by applying to

E. J. SOUTHWELL, Vestry Clerk.

Town-house, near Stepney-green, January 8, 1856.

ORIGINAL ANCASTER STONE.—To QUARRYMEN.—The Ancaster Stone Merchant, Mr. JOHN WILSON, has a VACANCY for a FOREMAN

WANTED, as WHARF CLERK to a Lime, Cement, and Tile Wharf, a respectable Young Man, whose references as to character, ability, and integrity will bear strict Inquiry. An applicant possessing some knowledge of building materials will be preferred.—Address, M. W. care of Mr. Selby, Oilman, 38, Blackfriars-road, London.

WANTED, a well-experienced SHOP FOREMAN, of middle age and steady habits.—Apply by letter, stating where last employed, to A. B. Office of "The Builder."

WANTED, in a Builder's Office, a CLERK, who is capable of, and has been accustomed to, measuring, estimating, and making up accounts. A first-rate man is required, and a good salary will be given.—Apply by letter to R. S. Office of "The Builder."

WANTED, an ARTICLED PUPIL in the OFFICE of an ARCHITECT and SURVEYOR, at the west-end of London, of extensive general practice, and in doing two public appointments. Apply by letter to A. Z. Messrs. Dawson and Knibbs, 47, Mortimer-street, Cavendish-square.

TO PLUMBERS, &c.

WANTED, for a CONSTANT SITUATION, a THREE-BRANCH HAND. One who can undertake gasfitting preferred.—Address, K. D. care of Mr. Canburn, 4, Eastern-place, Camberwell.

TO BUILDERS AND OTHERS

WANTED, by a respectable Person, a SITUATION as CLERK in an Office, and is fully acquainted with bookkeeping, measuring up work, estimating, &c. being competent for the same. Satisfactory references will be given by the late employer for integrity and sobriety. Terms moderate. Would have no objection to partial employment, or otherwise. Address by letter, prepaid, to FIDELIS, at Mr. Miller's, Stationer, Bridge-road, Lambeth.

TO BUILDERS, CABINET-MAKERS, AND OTHERS.

WANTED, by a respectable Person, a practical Man, EVENING EMPLOYMENT, from SIX to NINE; on SATURDAYS, from TEN to NINE, to make up and keep books. The present Advertiser is collector of several house properties. Terms moderate. Apply to T. H. 5, Duke-street, Bloomsbury.

TO BUILDERS.

WANTED by an experienced Man, a SITUATION as SHOP or OUT-DOOR FOREMAN. Good testimonials can be had from one of the largest firms in town.—Address, O. P. Office of "The Builder."

A PRACTICAL CLERK of WORKS, accustomed to the charge of extensive works, is open to an ENGAGEMENT. First-rate testimonials of ability and integrity.—Address, B. B. Hope Coffee-house, Bell-alley, Moorgate-street.

TO BUILDERS AND OTHERS.

A YOUNG JOINER, from the country, wishes for IMPROVEMENT at the BENCH for one or two years. He has been six years at the trade. Moderate wages.—Address, R. D Post-office, Exmouth.

TO ARCHITECTS AND SURVEYORS.

A YOUTH, aged 18, with two and a half years' experience, is OPEN to ENGAGE in town or country. Can copy and prepare drawings, neatly; writes a good hand; and is quick at accounts. Good references from previous employers.—Address, K. Post-office, Worcester.

TO BUILDERS, AUCTIONEERS, AND SURVEYORS.

A RESPECTABLE YOUNG MAN requires a SITUATION as CLERK, in one of the above Offices. He has been for the last two years clerk to a builder in town, and previous to that served his time at the bench and in the office with a builder and surveyor. Aged 23 years. Salary required, 33s. per week.—Address, A. B. C. 217, Shoreditch.

TO ARCHITECTS AND BUILDERS.

AN experienced Practical Man is in WANT of a SITUATION as CLERK of WORKS, or SHOP or GENERAL FOREMAN. Can be well recommended by the gentlemen he has served in those capacities.—Address, G. H. 16, William-street, Waterloo-road, Lambeth.

TO SURVEYORS, BUILDERS, HOUSE AND ESTATE AGENTS, &c

A PERSON, thoroughly qualified, desires an ENGAGEMENT.—Z. 11a, Heathcote-street, Gray's Inn-road

A bound copy of the Contracts, Specifications, and Prices of Works for the Houses of Parliament for disposal.

TO BUILDERS AND OTHERS.

A PRACTICAL SURVEYOR offers his ASSISTANCE in measuring, estimating, or the making up of builders' accounts. Terms moderate and per agreement.—Address, X. Y. Office of "The Builder."

A GOOD practical Carpenter and Joiner, well versed in construction, a good draughtsman, can take out quantities, measure, &c. having completed an engagement, wishes for a SITUATION as GENERAL or SHOP FOREMAN, or CLERK of WORKS, or to take charge of a job in town or country.—Address, ALPHA, 27, Murray-street, New North-road, Hoxton.

TO CIVIL ENGINEERS AND SURVEYORS.

A THOROUGH PRACTICAL LAND SURVEYOR, of thirty years' experience in the field and the office, would be happy to meet with an ENGAGEMENT.—Letters addressed to L. S. 23, Lambeth-road, Southwark.

TO BUILDERS IN THE COUNTRY.

A YOUTH, aged 18, wishes to obtain a SITUATION in a Builder's Office, where he would also gain a practical knowledge of the business, his services for the first year being deemed an equivalent for his board and lodging. Has been three years in the business, and can produce good recommendations.—Apply by letter, prepaid, to B. C. 40, Amwell-street, Pentonville, London.

TO PARENTS AND GUARDIANS.

A CIVIL ENGINEER, with lucrative appointments at his disposal, is OPEN to receive a gentleman as well-educated YOUTH, as out-door PUPIL. Ample references offered, and a liberal premium expected.—Apply in the first instance, to Mr MEYRICK, 8, Bucklersbury.

A YOUNG MAN is desirous of a RE-ENGAGEMENT in a Builder's Office, who has filled a similar situation with London Builders for seven years. References unexceptionable.—Address, R. R. 47, Essex-street, Strand.

TO ARCHITECTS

A RESPECTABLE competent Person wishes to meet with a short ENGAGEMENT to SUPERINTEND WORKS in or near Town. The advertiser understands surveying, and making fair and working drawings. Salary not so much an object as occupation.—Address, Y. Z. A. Office of "The Builder."

A PERSON of experience is OPEN to an ENGAGEMENT. He is thoroughly conversant with every branch of the building trade. Can prepare designs, details, specifications; take out quantities; measure up and value works. Has also a good knowledge of House and Estate Agency, and valuations.—Address, Z. 11a. Heathcote-street, Gray's inn-road, N.B. For disposal, a Copy of the Contracts, Specifications, and Prices, for the New Houses of Parliament.

AN ARCHITECT'S ASSISTANT, of fifteen years' experience in the profession, is also an artist, possesses a thorough knowledge of construction, details, and perspective, accustomed to assist in competitions, designing ornamental details, and having the highest testimonials, is desirous of a RE-ENGAGEMENT, permanent or otherwise remunerative.—Address, A. Architect, Office of "The Builder."

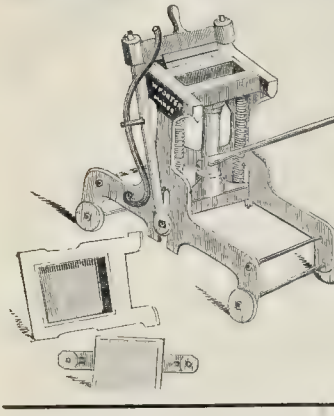
TO BUILDERS.

A SURVEYOR, of great practical experience, offers temporary ASSISTANCE to BUILDERS, in Measuring up Works, Estimating, Pricing Bills, Quantities, Drawing, &c.; also is a first-rate Builder's Bookkeeper and Accountant, &c. Good References to Builders, &c. Terms strictly moderate.—Address, Mr. WILLIAMS, 30, Canterbury-place, Lambeth.

PARTNERTHIP.—A Gentleman is desirous of entering into PARTNERSHIP with an ARCHITECT of established practice. The advertiser is fully qualified to take an active part, having been some time in business on his own account; or would not object to entering an office for a short period on salary, previous to partnership. References given and required.—Address, J. A. H. care of Mr. Wheeler, Royal Exchange-arcade, Manchester.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low prices, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.



N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

IMPROVED

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, for the every description of Sanitary Glazed Sewage-pipes, Closet pans, Furnace blocks, Fire-bricks, Gas-retorts, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The brick-kilns have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorset-shire Clays, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms
Lists of price and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works
London Agent: J. COX, 2 and 3, High-street, Lambeth.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—J. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Old-bury, near Birmingham. Agent — Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and fluze, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

BRICKS.—200,000 STOCK BRICKS, delivered into trucks at Wimbledon Railway Station, at 25s. per thousand. Place Bricks, at 22s. Apply to J. D. 9, Town-wall street, Dover.

BRICKS.—TO BE SOLD, 300,000 very superior kiln-burnt FACING BRICKS, within a quarter of a mile of he railway station, price 28s. per thousand.—Apply to Mr. CORDEN, Fricter, Brentwood, Essex

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, for the machines sent at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

AN established BRICKFIELD TO LET, at Shepherd's Bush.—Apply on the Spot, to Mr. ROBINSON, No. 1, Oakland Villa.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7½ per foot; above 10o feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by FOUR years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.
Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgshire, begs to offer pantiles at 32s. 6d. per 1,000; floor bricks and 4 inch pavings, at 35s. 6d. per 1,000; 8 inch pavings, at 37s. 6d. per 1,000; plain tiles, at 35s. per 1,000, delivered. Cash prices. Delivered on trucks in London or Eastern Counties Railway

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 681, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.
The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipp d from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City.

PORTLAND CEMENT WORKS NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

NOTICE.—Portland Street Lime, Limestone, Coal, Timber, and Sand Works, Walsall.—JOHN BREWER, senior, begs to inform his customers and the public generally, that he has retired from business, and transferred the same to his son, Mr. JOHN BREWER, junior, by whom the works will in future be carried on, and tenders his warmest thanks for the very liberal support he has so long received.
JOHN BREWER, junior, in soliciting a continuance of that support accorded to his father, begs to state that all commands will be promptly attended to, and goods sent to any part of the kingdom, either by rail, canal, or land carriage.
Orders received as usual by his traveller, Mr. WILLIAM ROBINSON, who will attend all the Corn-Markets; or at J. E.'s Lime and Coal Works, Vauxhall, Birmingham; and at the General Works, Walsall; to which latter place it is requested that all communications may be addressed.
A large quantity of spar for ornamental rockery work, &c. constantly on hand.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON and CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks, at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured by these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 5, Upper Thames street, London; as I also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpturing, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.
Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.
N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.
TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period on the new line, and any orders they are favoured with will command their best attention.
Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c

PORTLAND CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Pread-street, Paddington.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.

JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale Business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms.—Application either at Harwich or to his Agent, GEORGE MORRIS, 20, New Ormond street, Queen-square, London.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c. IN EVERY VARIETY.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the quarry.

Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

FOR SALE, by PRIVATE CONTRACT, the unexpired term of Seventeen Years of valuable BRICK-FIELDS, in the parish of Little Thurrock, near Grays Essex, and known as the "Old Brick-fields," within a stone's throw of the railway, and close to the river. Ten acres are at present worked, and eleven more remain untouched. The rent payable for the ten acres worked is 2l. per acre, and the remaining to be taken acre by acre, as required, at the same rent. There is a royalty of 1s. 6d. per 1,000. Permission can be obtained to lay a tramway to the railway, the erection of which would not cost more than 150l. This is acknowledged by the highest authorities to be the finest brick-field in Essex, the brick-earth being 17 to 18 feet in depth.—Apply to F. W. 2, Willow-brook-grove, Trafalgar-road, Old Kent-road; or LUCKING and BURTON, Auctioneers, 4a, Orchard-street, Portman-square.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

DRAWING CLASSES.—The Architects, Builders, Civil Engineers, and Machinists' Drawing Classes, conducted by THOMAS J. HILL, Architect. Offices, 18, Old street, City-road. Subjects taught—Architectural, Mechanical, Ornamental, and Perspective Drawing; Taking out Quantities, Abstracting and Valuing the same, Preparing Finished Drawings in Water Colour, &c. &c. Detail prospectuses to be had at the Offices

DRAWING CLASSES.—24, Guildford-street, Russell square.—At this establishment Pupils are thoroughly instructed in Architectural, Civil Engineering, and Mechanical Drawing; Ornamental, Perspective, and Water-colour Drawing; taking out Quantities, Measuring, Estimating, &c. &c.—Terms, One Guinea per Quarter Prospectuses and full particulars may be had at the Offices.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing, Colouring, Shading and Tinting, Ornamental and Water-Colour Drawing, Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

MATHEMATICAL and COMMERCIAL SCHOOL, GODALMING, SURREY, Conducted by Mr. WM. MASON.—The course of study embraces—Religious instruction; English taught grammatically; writing; arithmetic and commercial accounts; history and geography; natural philosophy, or the science of common things; mathematics, including Algebra, Euclid, mensuration, and trigonometry; and elementary Latin. French and artistic drawing, by masters, are charged extra. Instruction in any of the following subjects, at a small extra charge, is given to those whose intended vocations render it desirable:—Mensuration applied to the measurement of timber, artificers' work, land surveying, and gauging; mechanics and mechanism; Book-keeping; perspective and plain drawing. Terms, thirty guineas.—References, prospectuses, and particulars, on application to the Head Master, at the School.

THE PHOTOGRAPHIC SOCIETY'S THIRD ANNUAL EXHIBITION will OPEN to the public on MONDAY next, JANUARY 7th, at the Gallery of the Society of Painters in Water Colours, 5, Pall-mall East. Open at Ten. Admission One Shilling.

TO LEAD MERCHANTS, PLUMBERS, and GLASS-CUTTERS.—TO BE DISPOSED OF, with immediate possession, the goodwill and fixtures of an old-established LEAD MERCHANT, PLUMBER'S, and GLASS-CUTTING BUSINESS, desirably situate in one of the leading thoroughfares in London, midway between the South-Eastern and South-Western Railways, now doing an extensive town and country trade. Capital house, with private entrance; shop and warehouses in rear. Rent, 55l.—Satisfactory answers will be given to persons applying to F. INDERMAUR, Auctioneer, 71, Union-street, Borough.

TO UPHOLSTERERS, CABINET-MAKERS, and DECORATORS.—TO BE DISPOSED OF, by the assignees, on advantageous terms, by PRIVATE CONTRACT, the GOODWILL of the TRADE, as carried on by Thomas Henry Taylor, at 4, Bank-terrace, Broad-street, Birmingham, together with the whole of the finished and unfinished STOCK, consisting of first-class goods, of the best design and latest patterns. The establishment has obtained an extensive local celebrity by the superior style and finish of its productions.—Apply by letter, to Messrs. CHAPLIN, RICHARDS, and STUBBIN, Solicitors, or to Mr. GEORGE JABET, Solicitor, all of Birmingham.

TO ARCHITECTS.—TO BE DISPOSED OF, an ARCHITECT'S PRACTICE, which has been established four years, in a large and rapidly improving market town, in the West Riding of Yorkshire.—For particulars, application may be made to Mr. J. W. BLAKELEY, Solicitor, Dewsbury.

TO ENGINEERS, BRASSFOUNDERS, and OTHERS.—A good BUSINESS in the above line, established many years, and in full work, for IMMEDIATE DISPOSAL. The connection is large and safe, and the business capable of increase, and would suit any one or two persons having 5,000l. or 6,000l. A precious knowledge of the business is not indispensably necessary. Most satisfactory reasons will be given for the sale.—For further particulars, apply to Messrs. EDWARDS and SMITH, 19, Great Carter-lane, Doctors' Commons.

BUILDER'S BUSINESS, in Westminster, TO BE DISPOSED OF, with extensive premises, comprising suitable erections, workshops, sheds, store-rooms, and offices, for carrying on a large trade. The connection is an old-established one, and will be parted with for a moderate premium to any one taking a lease of the premises, and the stock and plant at a valuation.—For particulars and terms, apply to Messrs. EVERSFIELD and HORNE, Auctioneers and Estate Agents, 80, Parliament-street.

TO ENGINEERS, MACHINE MAKERS, and OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas-holders, sand pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Dying-dresses of superior make, and improved Vulcanized Rubber Supplejacket for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT. —"Second Testimonial.—" March 9th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO BUILDERS, CARPENTERS, &c.—Mahogany, 6d. per foot.; F. Walnut, 7d.; Yellow Deals, 4s.; 2l. Yellow Battens, 12l. 10s. per 120; Spruce, 3s.; 12 feet 3 inch by 11 Pine Plank, 4s.—Cartage free to any part of town.—T. FORMAN, 1, Walnut-tree-walk, Lambeth-walk.

TO BE SOLD for CASH, about 300 loads of fresh DANTZIC TIMBER. 300 loads of full-sized, at 70s. per load; and 100 loads of undersized, at 60s.—Apply to ALFRED ROSLING, Southwark-bridge Wharf, Bankside.

AT the LOWEST PRICES.—SAMUEL PUTNEY has much pleasure in informing the Trade, that notwithstanding the recent advances, he is still enabled to quote the following low prices:—

½ inch White, 13s. 6d. per square.		½ inch Yellow, 15s. per square.	
¾ ditto	16s.	"	¾ ditto	16s. 6d.	"
1 ditto	18s.	"	1 ditto	20s.	"

Laths, 36s. per load.

Also Timber, Deals, Planks, &c. Mouldings by machinery in the following low prices:—very great variety.

ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from ½-inch to 1½-inches thick, in Wainscot, Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Pantile Laths, Oak Cills, Plauk, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico, and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 30, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps.—Please note the address:—J. SIMMONS, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super., together with every particular of its cost and adaptation, may be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, touched out by the machine for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London-bridge.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET,

DEPOT, 2 AND 3, HIGH-STREET, LAMBETH.

HALF SOCKET. WHOLE SOCKET.

Manufacturers of every description of Sanitary Glazed Sewage Pipes, Bends, Junctions, White Glazed Closet Pans, Gas Retorts, Furnace Blocks, Crucibles, Fire Clay, &c. &c.

The Fire Bricks made from the Clay of this estate have been tested, and proved to be in every respect equal to those of Stourbridge and Newcastle.

DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

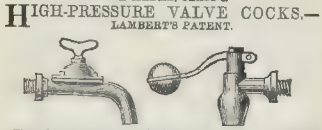
MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly seven years, and having largely supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.—The New Vestry Hall, Wellington-street, Strand; Barracks, Regent's Park-yard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established in Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices. NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERY ASSOCIATION.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cock, or wire.



LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 3.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, baths, stages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

ENGINES.—For SALE, THREE 12-horse

high-pressure horizontal ENGINES, admirably suited for winding; 13-inch cylinders, metallic pistons, either with or without boiler. Also two powerful double-purchase CRABS, capable of lifting 30 tons each. Also a wrought-iron TANK, 30 feet by 4 feet, by 4 feet, ¾ plates.—Apply, by letter, to No. 20, BOX, Postoffice, Derby.

PUMPING MACHINERY. — Lifting and

Forcing Pumps, Patent Centrifugal and Double-acting Pumps, deep Well Pumps, Steam-Engines (portable and fixed), Hydraulic Rams, Water Wheels, and every description of machinery, of the most improved construction, manufactured and supplied by GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex-wharf, Strand, London.

PORTABLE STEAM-ENGINE. — A new

8-horse PORTABLE STEAM-ENGINE, with tubular boiler, for SALE.—Can be seen at work at Mr. GOODWIN'S, 67, Great Guildford-street, Southwark, of whom particulars may be obtained.

PUMPING and WINDING ENGINE.—

TO BE LET ON HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 99, Blackfriars-road.

WARNER'S PATENT

VIBRATING STANDARD PUMPS.—PATENT CAST-IRON PUMPS, for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 30 feet.

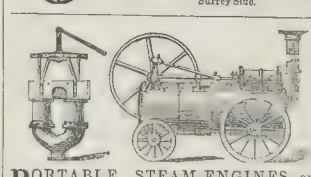
Diameter of Barrel.	Length of Barrel.		£ s. d.
2½ in.	and 1 ft. 7 in.	Fitted for lead,	1 10 0
2½ „	long 3 6	gutta percha	1 14 0
3 „	ditto 3 6	or cast iron	2 8 0
3½ „	ditto 3 6	flanged pipe,	2 13 0
4 „	ditto 3 6	as required	3 3 0
2½ „	short, with 15 feet of lead pipe attached, ready for fixing		2 14 0
2½ in.	long ditto ditto		2 18 0

The short-barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of copper and sinks in washhouses with soft water from underground tanks, or in hot, forcing, and plant houses; they may be fixed, when desired, under the stage.—May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

R. RICHARDS and CO.

PUMP MANUFACTURERS and ENGINEERS.

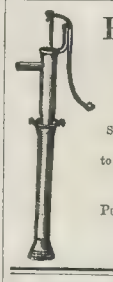
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.



PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.



Iron Pails 2s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PORTABLE STEAM-ENGINES and

PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels.

Plain or Sliding Telescope Suction,

ON HIRE.

SINGLE AND DOUBLE PUMPS, all sizes,

to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.

WANTED to PURCHASE, a good, strong

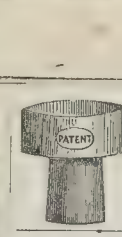
HORSE, CART, and HARNESS, complete, suitable for a builder.—Apply by letter, to A. B. 43, Wilmington-square, N. dealer need apply

TO MANUFACTURERS, BREWERS, or Persons employing any description of Furnaces; and Potters, China, Brick, and Tile-makers, interested in the "Smoke Question."

HANDS'S PATENT, for the economy of

fuel, consumption of smoke, and ventilation, will be in full work on WEDNESDAY, the 23rd JANUARY instant. Any person interested, desirous of seeing the same in action, may apply, if by letter prepaid, to Mr. JOHNSON HANDS, Epsom, where the above can be seen by appointment only.

On the 21st of December last, HANDS'S PATENT ECONOMISING KILN was at work in the drying-chamber that contains 55,500 cubic feet space; thermometer stood at 70 degrees; out of doors 15 degrees below Zero.



HANDS'S PATENT ECONOMISING

KILN is the only simple and effectual mode to use the heat, for drying moist moulded clays, equal at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION

HANDS'S PATENT is the only simple and

certain remedy for the SMOKE NUISANCE: it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

SMOKY CHIMNEYS

CURED EFFECTUALLY for TEN SHILLINGS, by SUTERS' PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind from driving it down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 55, Fenchurch-street, London.

By Her Majesty's Royal Letters Patent.

DUPREE and CO.'S

DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.

Also

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.

Also

VENTILATING ROOF LIGHTS, for Slate or Tile Roofing, without Paint or Putty.

Prospectuses sent on application.

London Depôt: ESNOUT and MANGER, 11, Mincing-lane, City.

LESS FUEL, MORE STEAM, and NO

SMOKE.—GARDNER'S PATENT SMOKE CONSUMER is self-acting, easily fixed, improves the draught, and saves fuel. It is applicable to all kinds of furnace boilers, as, manufactories, locomotives, and open fires, and entirely removes the smoke nuisance.—Apply at the Patentee's, 34, Norfolk-street, Middlesex Hospital, or to BURRIDGE and HEALY, 118, Dorset-street Fleet-street.

H. DOULTON & CO.'S TERRA-COTTA CHIMNEY-TOPS

Well withstand the action of the Weather and the Breeze, and are

QUITE IMPERISHABLE.

Prices not much higher than Cement.

DOULTON & CO.'S TERRA-COTTA POTS, &c.

Erected in London upwards of 20 years since, are now as sharp and perfect as when first manufactured.

Drawings supplied as to

H. DOULTON & CO. High-street, Lambeth.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BRUTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

THE VIEILLE MONTAGNE ZINC

MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface, it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 66, King William-street, City; and by the Manufacturing and Painting Agent, Mr. FREDK. BEARY, Pitsroy Works, Newroad. In Manchester and Liverpool, by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road,

London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coades' Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the decoration of our public buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and a quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-

COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-relievi, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

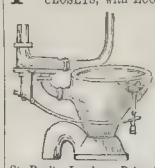
SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.



W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppages in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kennington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE POWERFUL FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 32, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Slabs, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES

3 inch bore, in 2 ft. 6 in. lengths, at				3d	per foot.

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

THE STAFFORDSHIRE SANITARY POTTERY COMPANY.—Proprietors, E. F. WINSTONE and Co.—Manufacturers of glazed water-closets and urinals (buff stone outside, and white enamelled inside), and every description of pan basins; also vitrified and glazed sewer pipes, &c. Great College-street, Camden-town, London, late of Pickard-street, City-road.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

SALES BY AUCTION.

IN BANKRUPTCY, SOUTHWARK.—WATERSIDE PREMISES. TO BUILDERS AND OTHERS

MR. T. S. SMITH has received instructions from the Assignees of Mr. W. H. Burgess, to SELL by AUCTION, at the MART, on THURSDAY, JANUARY 24th, at TWELVE (unless previously disposed of by private contract), the LEASE, for an unexpired term of about nineteen years, at a moderate rental, of a WATERSIDE THREE FLOOR WAREHOUSE, distinguished as "British Wharf," Glink-street, Southwark. May be viewed, and particulars, with conditions of sale obtained on the Premises; at the Mart; of Messrs. LAWRANCE, PEAKES, and HOPER, Old Jewry Chambers; and of the Auctioneer, 44, Lombard-street, and Upton, Essex.

CROYDON, SURREY.—Builder's Stock and Trade Utensils.

MESSRS. BLAKE will SELL by AUCTION, at the PREMISES, High-street, on WEDNESDAY, JANUARY 23, and following day, at ELEVEN o'clock each day (by direction of Mr. Alfred Cripps), the capital STOCK in TRADE, comprising 100 squares of prepared floor boards, 350 dry deals, planks, and battens; a large quantity of rods and laths; 10 tons of iron, pegtiles, 2,000 bricks, six and a four panelled doors, sashes and frames, oak sash-sill, scantling and plank, elm boards, foreign fir, in logs and scantling; sawn fence and gate posts and rails, 2,000 coils of Lambe's saddle-boards, poles, ladders, wheelbarrow planks and barrows, stone blocks, worked copings and sills, York and Portland paving, sinks and chimney pieces, plain and plain tiles, quarry tiles, light and brasswork, iron repository, benches, timber wheels, jacks, handtrucks, iron pump, four builders' carts and harness, capital light spring cart, sets of harness, six full second-hand bedsteads, and numerous effects.—May be viewed the day before the sale, and catalogues had on the premises; at the Inns in the neighbourhood; at Garraway's Coffee-house, Change-alley; the Artichoke Inn, Newington-causeway; and of Messrs BLAKE, Croydon

N CHANCERY.—"Gough v. Hunting," "Hunting v. Gough." To Planofortes Desiring Improved Properties of Saw mills, and Others.—The valuable Patent Right for Cutting Thin Veneering) Veneers, whereby fully double the number of Veneers of an equal thickness are obtained from the log than are obtained from the use of the Saw; together with all the Patent Machinery, Steam-engine, Boiler and Gear for making the same, as also the Lease of the Premises, &c.

MESSRS. PRICE and CLARK will SELL by AUCTION, on the PREMISES, known as Battersea Bridge Wharf, on the Kingsland Road, London, on THURSDAY, FEBRUARY 7, at TWELVE for ONE o'clock, by order of the High Court of Chancery of the Rolls, the QUEEN'S ROAD LIMITED PATENT, granted to William Keogh and another for "IMPROVEMENTS in the MANUFACTURE of VENEERS and in Machinery and Apparatus connected therewith," dated 26th October, 1853, being one of the most ingenious and important inventions of modern times, alike valuable for its economy in labour, and for the production as to the beauty and superiority of its veneers, whereby a saving of one-third, from cold cut to thirty-two veneers of any thickness, and from a section of 1 inch to half an inch as well as the most delicate veneers, can be produced by the same machine, at a speed of 300 cuts per minute, and that by one man, and at considerably less cost: together with the patent cutting machine as now in use at a very large expense, and in twelve power steam engines and boilers, and the gear for working same and connected therewith; also the lease of the very commanding premises, comprising a timber-yard, machine-room, engine-house and warehouses, counting-house, and a capital dwelling-house, which is held for a long term at a moderate rental. At the same time will be sold several thousand feet of knife-cut veneers of rosewood and mahogany, and many effects. The whole may be viewed fourteen days prior to the sale, and particulars had of Mr. Sydney Hamilton, Solicitor, 30, Kingsroad, Bedford-row; of Messrs. TRIPPER and EVRE, Solicitors, 1, John-street, Bedford-row; of Messrs. KNIGHT and UPJOHN, Solicitors, Newcastle-under-Lyne; at the Place of Sale; and of Messrs. PRICE and CLARK, Auctioneers, Chancery lane, London.

TO TIMBER-MERCHANTS, SHIP BUILDERS, AND OTHERS Dunn Green, near Sevenoaks, Kent.

MR. WILLIAM HODSOLL has received instructions from John Wreford, esq. to SELL by AUCTION, at the OLD BROWN INN, Dunn-green, on FRIDAY, JANUARY 18th, 1856, at THREE o'clock, 150 excellent ELM TIMBER TREES, including many of very large dimensions, standing upon the Broughton Estate, in the parish of Offord, Kent. N.B. The whole of these superb Timber trees are situated to good roads, and may be easily removed.—May be viewed; application to Jesse Brooks, at Broughton House, near Riverhead, and catalogues had (a week previously), at the Inns in the neighbourhood, at the Place of Sale, and of Mr. WILLIAM HODSOLL, Auctioneer, &c. Farningham, Kent.

SALES BY AUCTION.

WANTED, a good FAMILY RESIDENCE, to RENT or PURCHASE: the west end preferred. The reception and principal bedrooms must be large, and the situation healthy and respectable; rent not to exceed £120 per annum. If with stabling it will be preferred.—Full particulars, stating position and terms, to be addressed to H. P. G. care of Mr. Hammond, 37, Lombard-street.

TO TIMBER MERCHANTS and OTHERS.

The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the same, conveyed by barge, for landing all sorts of English Timber, &c. Spacious Dry and Wet Docking Docks, 30 and 16 ft. Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NORES and Co as above.

SITE for a CHURCH.—WANTED, a SPACE of GROUND for the erection of a church, situated within or near the following boundaries: Finsbury square on the south, Pavement on the north, Kingsland-road on the east, and the City-road on the west.—Application in writing only to be addressed to F. C. Auld and Woods, 18, Hart street, Mark-lane.

SEVERAL CARCASSES TO BE SOLD, of EIGHT ROOMED HOUSES, well situated.—Apply to Mr. BRIGGS, No. 25, Stanley-street, Eccleston square, Pimlico.

IMPORTANT to SOAPMAKERS, CAPITALISTS, and OTHERS.—TO BE LET, all those excellent and compact SOAP WORKS, situate at Bloomfield, in the parish of Tipton, in the county of Stafford, comprising cutting and framing rooms, stove-room, packing-room, boiling-room, with four coppers; soap and cutting room adjoining, counting-house and office, store-room and boiler's office, cutting cellar, and two packing-rooms attached; melting and bleaching boiler, carpenters' shop, machine and house, office, warehouse, lofty and capital black ash furnace, with sheds attached; smiths' shop, stable, and gig-house, large yard and reservoir, with a good supply of water. The Premises are lighted with gas, and surrounded by a substantial wall and entrance-doors; are particularly adapted for the business, as fitted up with every convenience, and now in full operation. They are situated in a very populous district, and within short distances of extensive collieries, ironworks, canals, and the goods stations on the Stour Valley and Oxford, Worcester, and Wolverhampton Railways. The proprietors are giving up the premises in consequence of other engagements.—To treat, application (if by letter, post paid) to CHARLES JAMES and GEORGE HIPKINS, the Premises; or to Mr. SOLOMON POWELL, Surveyor, &c. Tipton, Staffordshire.

WANTED, TO PURCHASE, a FREEHOLD COTTAGE, or a small PLOT of FREEHOLD LAND, in lots less than a perch frontage, either in London or within an easy distance.—Send all particulars and lowest price to Mr. CURTIS, Enfield, Middlesex.

DOUBLE-STREET, SPALDING.—To BUILDERS and OTHERS.—TO BE SOLD or LET, with immediate possession, all those desirable PREMISES, situate in Double-street, consisting of capital workshops, sawpit, deal sheds, and large yard, with a capital RESIDENCE, half of which may be let, as the same is now in the occupation of Mr. William East, or his under tenant. For further particulars apply to agent, apply to Mr. ROBERT ELLIS, Builder, Fleet, near Holbeach

NEW METROPOLITAN CATTLE-MARKET.—TAVERNS TO BE LET.—The Markets Improvement Committee will meet at Guildhall, on FRIDAY, JANUARY 25, at ONE precisely, to receive TENDERS for the TWO TAVERNS in the New Market, viz "The Queen's Arms," and the "City Arms." The particular Taverns required must be specified in the Tender. Tenders must be sealed and enclosed "Tenders for Taverns." The Committee do not bind themselves to accept the highest or any Tender. Plans may be seen and particulars obtained at the Architect's Office, Guildhall, any day (Sundays excepted) between the hours of TEN and FOUR.

Guildhall, Jan. 7, 1856. MEREWETHER.

MANUFACTURING PREMISES, ten miles from London, on the Eastern Counties Railway.—TO BE LET, at a moderate rent, with immediate possession, SPACIOUS PREMISES, with an unfailing supply of most excellent water, lately used as a brewery.—For particulars, apply to Messrs. REED, LANGFORD, and MARRIOTT, Solicitors, Fulham, Chesterfield, or to Messrs. FISDELL and ASHCOMBE, Surveyors and Land Agents, Enfield, Middlesex.

TO BUILDERS AND OTHERS.

R. NASH is desirous of CONTRACTING for PAPER-HANGING, more or less, which for quality and cleanness will give general satisfaction. Paper-hanging in or for the trade. Estimates and measure made on reasonable terms. Eight years' good experience.—Address, R. NASH, Junr, 10, Nuttall-street, Nottingham.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE 22 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, January 12, 1856.

Jan. 3, 1856.

MASONS' PROVIDENT INSTITUTION, established 1845, for granting Pensions, and the erection of an Asylum for aged and decayed Masons, their Widows and Orphans. President—WILLIAM TITE, Esq. M.P. F.R.S. The Managing Committee respectfully beg to announce that the TENTH ANNUAL GENERAL MEETING of the Donors and Subscribers of the above institution, will be held on WEDNESDAY, JANUARY the 23rd, 1856, at the SAINT PANCRAS ATHENÆUM, George-street, Euston-square, for the purpose of receiving the Report of the Committee and Auditors for the past year; to elect the Committee for the ensuing year; also to elect a Sub-Treasurer in the room of Mr. E. Farrow, resigned; and to transact other important business of the Institution.

P.S. As the Meetings of the Institution are not confined to its Donors and Subscribers, it is the earnest hope of the Committee that the trade will cheerfully come forward to support an Institution calculated to render a large benefit to the operative bricklayers of the trade, therefore earnestly invite their attendance. Reserved seats for ladies. The Chair will be taken at EIGHT o'clock precisely. By Order, WILLIAM DIX, Secretary.

14, William-street, Hampstead-road.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, Objects of Still life, &c. the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 2l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Modelling and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session.—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

GEOLOGY, KING'S COLLEGE, LONDON.—Professor TENNANT, F.G.S. will give a COURSE of LECTURES on GEOLOGY, to commence on FRIDAY MORNING, JANUARY 25, at NINE o'clock, and to be continued on each succeeding WEDNESDAY and FRIDAY, at the same hour.

R. W. JELF, D.D. Principal.

ARCHITECTURAL EXHIBITION and COLLECTION of PATENTS and MANUFACTURES connected with building, at the GALLERIES, 9, SUFFOLK-STREET, Pall-mall East, is NOW OPEN, from Nine till dusk. Admission, One Shilling; or at all times to the Galleries, and to all the lectures, by season tickets. Half-a-Crown each. Lecture for TUESDAY EVENING, JANUARY 22, at EIGHT o'clock, "Utilitarianism in Architecture," by the Rev. J. L. PETIT.—Lists of Lectures, Tickets, and all particulars to be had at the Galleries.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, JANUARY 22, Mr. G. J. WIGLEY will resume his notes on "Archæological Studies in Jerusalem."

The Class of Design will meet February 1. Subject for sketch: "The Capital of a Pilaster of which the upper Diameter is 18 inches."

T. W. GOODMAN,
J. A. BUNKER, } Hon Secs.

Lyon's Inn Hall.

LECTURES to WORKING MEN.—The following COURSES of LECTURES will be delivered on the Evenings during the present Session, in the Theatre of the Museum of Practical Geology, Jermyn-street:—

1. On Natural Philosophy. By G. G. Stokes, M.A. F.R.S.
2. On the First Principles of Chemistry. By A. W. Hofman, Ph.D. F.R.S.
3. On Metals. By John Percy, M.D. F.R.S.
4. On Mining. By W. W. Smyth, M.A.

The first course of Six Lectures on Natural Philosophy will be commenced at EIGHT o'clock p.m. on TUESDAY, JANUARY 29th, 1856. Tickets may be obtained by working men only, on and after Monday, the 21st instant, from Ten or Four o'clock, upon payment of a registration fee of Sixpence.

TRENHAM REEKS, Registrar.

ST. SAVIOUR'S DISTRICT BOARD of WORKS.—SURVEYOR, INSPECTOR of NUISANCES, and MESSENGER.—Notice is hereby given, that the St. Saviour's District Board of Works will meet at their Board-room, in Union-street, Bankside, Southwark, on WEDNESDAY, 16th of JANUARY inst. at TEN o'clock in the forenoon precisely to ELECT a SURVEYOR, an INSPECTOR of NUISANCES, and a MESSENGER for the district. The salary of the Surveyor will be 300l. per annum; that of Inspector of Nuisances 80l. per annum; and that of Messenger, 1l. 1s. per week. The appointments to be for one year only. The particulars of the respective duties can be seen and ascertained upon application at the Clerk's Offices, as under. All applications to be in writing sealed up, and directed to the Board, and to be sent in with testimonials to the Board, at their Offices, in Emerson-street, on or before SATURDAY, the 26th inst.—By order of the Board,

HERBERT STURMY, Clerk.

8, Wellington-street, London-bridge,
Southwark, Jan. 17th, 1856.

TO SURVEYORS of SEWERS and PAVEMENTS.—PARISH of CLERKENWELL.—The Vestry will, at their meeting on THURSDAY, the 24th inst. at HALF-PAST SIX o'clock in the evening precisely, at their Hall, 2, Upper Rosoman-street, receive testimonials from persons presenting themselves as candidates for the Office of a SURVEYOR, who, besides a competent knowledge of the duties of a Surveyor of Pavements and Public Ways, must be qualified to take levels, form reports, make plans and estimates, superintend the construction and measurement of sewers, take levels for house-drains, and see to their proper inclination and efficient connection with the sewers, &c. He will be called upon to give his duty may be inspected daily at the Vestry-hall, from TEN till FOUR o'clock. The salary will be 200l. for the first year; after which it will be increased 50l. annually, if the officer appointed continue in his employment, until the expiration of five years; but the office will be held only during the Vestry's pleasure.—By order of the Vestry.

Jan. 11, 1856. THOS. CROMWELL, Clerk, pro tem.

COMPETITIONS.

CEMETERY, MANSFIELD, NOTTINGHAMSHIRE.—To ARCHITECTS, SURVEYORS, LANDSCAPE GARDENERS, and OTHERS.—Plans, Designs, and Drawings are required for building Two CEMETERY CHAPELS (adjoining each other), two Sets with Lodges and Entrance Gates, for the Mansfield Cemetery. The expense of the Chapels is not to exceed the sum of 1,000l. and of the Entrance Gates, with Lodges, the sum of 300l. Plans to comprise elevation and ground plans, accompanied by approximating estimate of expense. The sum of 7l. is offered for the plan considered to be the best, for the second best 5l., and 3l. for the third best. Plans and Drawings to be sent in for LEVELLING, PLANTING, and FENCING the said proposed cemetery, and laying out the walks therein. The sum of 10l. is offered for the plan considered to be the best, and 7l. for the second best. Persons sending plans are referred by way of reference to the Architect, Civil Engineer, and Land Agent to undertake the execution of the building, at the usual commission per cent. upon the outlay. No contractor to be paid for plans, and no plans to be paid for, except the three best for the buildings, and the two best for laying out the ground. The plans to be sent to the undersigned, end up, and endorsed "Plans for Mansfield Cemetery," on or before the 30th day of FEBRUARY next. By order of the Burial Board,

Mansfield, 16th January, 1856.

R. J. PARSONS, Clerk.

TO ARTISTS.—Five Guineas will be paid for the best DESIGN for the COMPANY'S SEAL, illustrative of the business of a fire and general assurance and advantages of LIFE ASSURANCE PROPERTY. Drawings not exceeding 3 inches in diameter must be delivered on or before the 25th inst. Further information may be had at the Offices of the Treasury, No. 1, Cannon-street West, City.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall-mall, London, on or before WEDNESDAY, the 20th day of FEBRUARY, 1856, from persons desirous of contracting for the above ALTERATIONS and ADDITIONS to the WESTERN HEIGHTS BARRACKS, at Dover. Drawings and specifications of the works to be executed may be seen by persons fully competent to undertake the work only, (where and when applied), and forms of Tender obtained at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock, from FRIDAY, the 1st of FEBRUARY, to TUESDAY, the 19th of FEBRUARY, 1856. Sundays excepted. Any person belonging to the Royal Engineer Department will attend each day at the Western Heights Barracks, from TEN to TWELVE o'clock, to point out the work and explain the drawings. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 3,000l. for the due performance of the contract. Tenders for the above work to be addressed to the Director General of Contracts, Pall-mall, London, and endorsed "Tender for work at Dover."—N.B. The War Department reserves to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, January 14th, 1856.

TO BUILDERS.—Any person willing to enter into CONTRACT with the Justices of the Peace of the county of Hereford for BUILDING MILITIA STORE ROOMS, upon the land purchased for such purpose, as part of the Bectonsham Estate, in the parish of Saint Owen, Hereford, may see a scaled TENDER to that effect at the Shire Hall, Hereford on or before the 6th day of FEBRUARY next, between the hours of TEN and TWO. Plans and Specifications of the work may be seen at my said Office each day, between such hours, and further particulars may be obtained of Mr. GRAHAM, Clerk of the Works, King's Acre, near Hereford. Parties sending Tenders not to be present on the above named day, but they will be communicated with prior to the day on which such Tenders will be submitted for approval.

JOHN CLEAVE, Clerk of the Peace.

Hereford, 11th January, 1856.

STAINES UNION.—To BUILDERS, &c.—Notice is hereby given that the Guardians of the above Union propose to ERECT a HOSPITAL in accordance with the plan and specification deposited for inspection at the Staines Union Workhouse. All persons desirous of CONTRACTING with the Guardians for the same, are desired to send sealed TENDERS, addressed "To the Chairman of the Board of Guardians, Staines Union Workhouse, Stanwell," on or before the hour of TEN o'clock of TUESDAY, the 5th FEBRUARY next. The Guardians will not necessarily accept the Lowest or any Tender.

By order of the Board,

RANDOLPH HENRY HORNE, Clerk.

Staines, January 16, 1856.

WEST BROMWICH UNION.—The ERECTION of a NEW UNION WORKHOUSE.

EXTENSION of TIME.—Persons desirous of CONTRACTING with the Guardians of the Poor of the West Bromwich Union, in the counties of Stafford and Worcester, for the erection of a New Union Workhouse, are hereby informed that the time for sending in Tenders for the same is EXTENDED to the 22nd day of FEBRUARY next, at which day they must be sent in, pursuant to the terms of the former advertisement. Full particulars may be obtained at the Offices of Messrs. BRIDGES and EVERAT, Architects, No. 1, Bradford-street, Birmingham, where the drawings and specifications may be seen until the 4th day of FEBRUARY next. By order of the Board.

CHAS. STRINGER, Clerk.

West Bromwich, 14th January, 1856.

ST. NICHOLAS' CEMETERY, NEWCASTLE-UPON-TYNE.—To BUILDERS, IRONFOUNDERS, ORNAMENTAL GARDENERS, &c. The Burial Board of the parish of St. Nicholas are now receiving sealed TENDERS for the following WORKS, contained in their Burial ground, viz.:—

1st. For erecting Two Chapels and Superintendent's House, with Lodge Houses and Corridors, &c. attached, and at the Boundary Wall on the Entrance Gateway.

2nd. For forming about 5,300 yards from Dressing Railing and Ornamental Posts and Chains for the division of the ground, &c.

3rd. For Laying out the Walks and Footpaths and Planting the Ground.

The plans and specifications of the works may be seen at the office of the Architects, Messrs. ALDIN and LAMB, No. 7, Grey-street, Newcastle, between the hours of TEN and FOUR, after the 5th JANUARY inst. The Tenders (sealed) are to be forwarded by post or delivered at the Office, No. 7, Grey-street, before FOUR o'clock in the Afternoon of the 14th day of FEBRUARY next, addressed "Tender for St. Nicholas' Cemetery, No. 1, 2, or 3." The Burial Board do not bind themselves to accept the lowest or any Tender, but the contractors will be required to enter into bonds for the due performance of their contracts.

GEORGE THIRKELD GIBSON, Clerk to the Board.

St. Nicholas' Vestry, 9th January, 1856.

SHIPLEY SEWERAGE WORKS.—The Shipley Local Board of Health hereby give Notice, that they are prepared to receive TENDERS from competent persons for PROVIDING, LAYING DOWN, and COMPLETING CERTAIN BRICK and EARTHENWARE SEWERS, DRAINS, MANHOLES, GULLIES, &c. in the Township of Shipley, for the sewerage and drainage of their districts. Plans, sections, detail drawings, and specifications, may be seen, and printed forms of Tender obtained, at the Office of Mr. ISAAC HOLDSWORTH, Civil Engineer, &c. Bradford, where sealed Tenders are to be delivered to the Chairman of the Local Board at the Office aforesaid, on or before the hour of TWELVE o'clock at noon of the 31st day of JANUARY, 1856, addressed to the Clerk to the Local Board, and that the Board do not bind themselves to accept the lowest or any Tender.

JO. THOMPSON, Clerk to the said Local Board.

Bradford, January 16, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

BRAINTREE LOCAL BOARD of HEALTH. The Local Board of Health for the District of Braintree in the County of Essex hereby give notice that they are desirous of CONTRACTING for the following Works, viz.:—

CONTRACT No 1. For the supply and delivery of Stoneware Pipes and Iron Pipes.

CONTRACT No 2. For the supply and delivery of a quantity of Iron Pipes Junctions, and other Castings.

CONTRACT No 3. For the Excavation and Laying Iron and Stone Pipes, and for the Supply of all Materials required except Pipes.

CONTRACT No 4. For the Excavation, Labour, and Materials required in the Construction of about Two Yards of Brick Sewer.

CONTRACT No 5. For the Labour and Materials required in Sinking an Iron Tank.

CONTRACT No 6. For the Materials and Labour required in Erecting Two Hydraulic Pressure Steam Engines, with Pumps, Boilers, and all other Machinery and Apparatus necessary to raise and deliver the Water, after the Engines and Pumps shall be completed by the Contractor for Contract No 5.

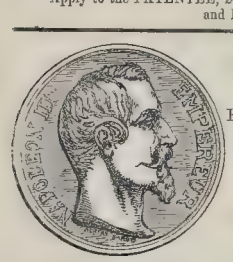
LESS FUEL, MORE STEAM, NO SMOKE.
GARDNER'S PATENT SMOKE CONSUMER

IS SELF ACTING, EASILY FIXED AT A SMALL COST, IMPROVES THE DRAUGHT, AND SAVES FUEL.

APPLICABLE TO ALL FURNACES, BOILERS, OVENS,

LOCOMOTIVES, MARINE ENGINES, AND OPEN FIRES.



"Chemical Works, Bow Common, November 9, 1855.

"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connection with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled, without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.

"To E. V. GARDNER, Esq." "I remain, dear Sir, yours truly, "FREDK. ALLEN.

Apply to the PATENTEE, 24, Norfolk-street, Middlesex-Hospital; or to Messrs. BURBIDGE and HEALY, 118, Dorset-street, Fleet-street.

A

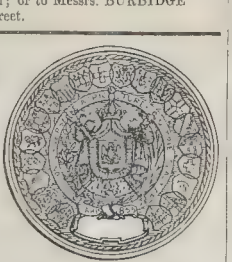
FIRST-CLASS MEDAL

WAS AWARDED TO

F. EDWANDS, SON, and CO.

AT THE

PARIS EXHIBITION,



For the SPECIMENS they exhibited of

DR. ARNOTT'S

SMOKE-CONSUMING GRATE,

AND SMOKE-CONSUMING

COOKING APPARATUS.

F. EDWARDS, SON, and CO. beg to inform the public that their STOCK of GRATES is ENTIRELY REFORMED, and consists SOLELY of GRATES on the SMOKE-CONSUMING PRINCIPLE. A large variety in real Bronze, Ormolu, Steel, and Berlin Black, suitable for Drawing-rooms, Dining-rooms, and Libraries, from 7l. to 30l.

The following are the prices of those for ordinary use:—

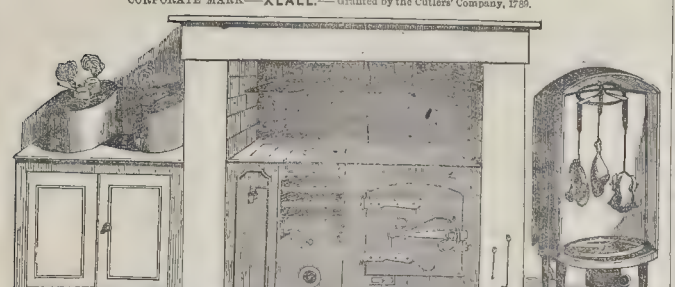
For Bed-rooms, Offices, &c.		For Sitting-rooms, Parlours, Bed-rooms, Offices, &c.	
1 foot 7 inches wide, 12-inch fire	£2 10 0	2 feet wide and under	£4 0 0
1 foot 9 inches wide, 14-inch fire	2 12 6	Above 2 feet wide, and not exceeding 2 feet 6 inches..	4 10 0
The above Grates can be increased in width to that of any fire-place by iron or slate slips; iron slips supplied at 6d. per inch.		" 2 feet 6 inches " 3 feet	5 0 0
		" 3 feet " 3 feet 6 inches..	5 10 0

By the Grates on this principle, as properly constructed by F. Edwards, Son, and Co smoky chimneys are avoided, an agreeable fire is maintained, with one-half the trouble attending the ordinary grate, and a saving of from forty to fifty per cent. is effected in the consumption of fuel.

PROSPECTUSES, WITH FULL PARTICULARS AND TESTIMONIALS, SENT ON APPLICATION.

To be seen in daily operation at the Show Rooms, 42, Poland-street, Oxford-street, London.

PARKIN AND MARSHALL,



GENERAL MERCHANTS, AND MANUFACTURERS OF

TABLE CUTLERY, PEN and POCKET KNIVES, SCISSORS, RAZORS, ELECTRO PLATED WARES, FILES, SAWS, EDGE and JOINERS' TOOLS, AUGERS, STEEL, &c. &c.

TELEGRAPH WORKS, SHEFFIELD.

OFFICES—{NEW YORK—71, JOHN STREET. BOSTON—25, KILBY-STREET, U.S. MELBOURNE—91, COLLINS-STREET EAST.

CORPORATE MARK—XLALL.—Granted by the Cutlers' Company, 1789.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undernamed Articles, manufactured by Mr. ENOCH OLDFIELD TINDALL, Iron Works, Scarborough, viz.: TINDALL'S PATENT PORTABLE MANGLES, WASHING AND WRINGING MACHINES, SAMSON PATENT, COOK-SO RANGES, LAUNDRY STOVES, SANATORY MILLS, TURNIP CUTTERS, &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are rapidly superseding the antiquated Ranges of our country.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Flats at once, occupies only 12 inches in space, is removable from one room to another, and will be found invaluable in Public Hospitals, Infirmaries, Lunatic Asylums, and Private Families.

E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia as well as not being liable to choke, and yet is easily cleaned without removing.

THE MANGLES AND WRINGING MACHINES have been greatly reduced into the Royal Households, most of the Public Laundries, and also into many thousand private Families, who bear testimony to their efficiency and superiority over all others.

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They are kept in stock, and should be in every stable.

Drawings of Mangles, &c with Testimonials, can be had on application at Telegraph Works, Sheffield, or of the Retail Agents, who are appointed in almost every principal Town in the United Kingdom.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quadruple patents of 1849-51-54 and 1855, including their Gunpowder Proof Solid Locks and Door without which no safe is secure.

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX and SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 4 & 5, Moorgate-street, City.—Circulars free by post.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c. The Trade supplied on the best terms with House Bells, Wire, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gasfitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK, also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Ironbridge-wharf No. 6, Bankside, London, near the Southwark-iron bridge.

WARMING LARGE BUILDINGS, &c.—CUTLER and SONS respectfully state that they are prepared to Contract for the Erection of their Improved Powerful Air Apparatus for effectually and economically Warming Churches, and all other public or private buildings, which they undertake in every instance to guarantee.—Drawings forwarded on application at their Premises, 10, Great Queen-street, Long-acre, London.

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (Class 4?), at the Great Exhibition in 1851, especially adapted for warming, with great economy and ease, Churches, Schools, Entrance halls, Libraries, and Warerooms.—CUTLER and SONS, Sole Licensees and Manufacturers, 10, Great Queen-street, Long-acre, London.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and Co. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

BUILDINGS HEATED by HOT WATER. G. B. COOPER, IRONWORKS, 121, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by the Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's road, Chelsea.

FRYER, MANUFACTURER of WARMING and VENTILATING APPARATUS.—Works:—Fetter-lane, York.—J. FRYER having had twenty years' experience in warming buildings by the circulation of hot water, now fixes, and will be in attendance for tuning, Dr. Arnott's Hot Water Clad Self-feeding Boilers, requiring no stoking whatever. These boilers are filled from the top with coke, and will burn at a trifling cost from eight to twelve hours. J. F.'s Hot Water Apparatus, ornamental and plain, suitable for Conservatories, Shops, Stoves, &c. is confidently recommended, and is easily taken to pieces for removal.—J. FRYER, Manufacturer, Fetter-lane, York.

DRYING and SEASONING PROCESS, by CURRENTS of HEATED AIR (Lymington's Patent).—This important and valuable process has been successfully applied to almost every manufacture in which artificial and regular evaporation is required. It is used with great advantage and economy in seasoning wood, drying paper, malt, grain, starch, yarn, silks, enamelled and patent leathers, hard goods, manure, tobacco, biscuit, and vegetables; purifying feathers, disinfecting clothing and bedding, and for numerous other purposes. The heated current is rapid and continuous, and can be raised to 500 degrees. The process possesses many advantages not obtainable from cockles, hot flues, or hot-water pipes. If a temperature not exceeding 200 degrees is required, the steam-heating apparatus lately patented is recommended, no furnace or fuel for which is needed beyond that which is used for the purposes of the steam-engine.

For particulars apply to the Patent Desiccating Company, 17, Gracechurch-street, City.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 13, York-buildings, Adelphi.

TO STONEMASONS, BUILDERS, RAILROAD CONTRACTORS, &c.

RICH. RICHARDS and SON, 95, New Park-street, Southwark, London, Manufacturers of TRAVELLING CRANES and JENNIES, to span from 5 to 50 feet, on the latest and best principle, warranted to lift from 5 to 30 tons, or upwards. Cranes for double and single purchase; stone saws, hammered and of the best quality, suitable for hard land stone or marble, made to any length; also saws for Caen and Bath stone. Blocks of all sizes, from two and three sheaves, or single. Chain, suitable for the blocks, for hoisting any weight, made of the best iron, and tested by patent machinery. Lifting or screw jacks. Sheaves, pins, and all sorts of iron-turning. Cranes for railways, and cranes and hoisting-tackle of every description to order or by estimate.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES

a complete LIST of which will be forwarded upon application to FREDERICK PLATH, Nail Manufacturer and General Factor, Regent-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

CASTINGS for ENGINEERS, BUILDERS, and CONTRACTORS, Supplied on reasonable terms by DODDS and CO. WINDSOR WORKS, CITY-ROAD, LONDON. N.B. The execution of all orders promptly attended to.

WILLIAM DODDS and CO. MANUFACTURE and CONTRACT for RAILWAY CARRIAGE and GENERAL IRONWORK, WROUGHT and CAST IRON BRIDGES, IRON ROOFS, &c. IMPERIAL IRONWORKS, Wenlock-road, City-road, London. Offices—28, Leadenhall-street

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station. A large variety of Buildings always on view, churches, chapels, shooting lodges, lodges, bazaars, ornamental villas, dwelling houses, farm buildings, and fire proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JOHN HENDERSON PORTER, ENGINEER AND CONTRACTOR, IRON BUILDING AND ROOFING WORKS, GAS STREET, BIRMINGHAM. LONDON OFFICE 1, RICHES-COURT, LIME-STREET.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC. GREAT REDUCTION IN PRICE. PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No 11 gauge weighs about	18 oz.	per foot super.	
12	"	20	"
13	"	24	"
14	"	26	"

Full particulars and the reduced price sent by post on application to A. MOREWOOD and CO. DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

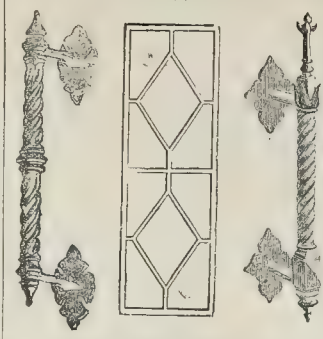
PATENT GALVANIZING and CORRUGATING IRONWORKS Improved Process. WORKS GLASS HOUSE YARD, opposite the Entrance to the London Docks. GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c. A Discount allowed to the Trade.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London. Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required Patent Galvanized Iron supplied in every form. Sheets plain and corrugated. Roofs fixed complete. J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles. An Allowance to the Trade.

A. MOREWOOD and CO. (late Morewood and Rogers), Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets, PLAIN or CORRUGATED, and Curved, of all Gauges. Manufactured articles always on hand, such as pails, scoops bowls, riddles, skips, &c. of all sizes. Also the Patent Galvanized Tinned Iron Tiles, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c. Estimates given for Roofs, and every description of Galvanized Building, at the OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

JOHN WALKER, Corrugated Iron Manufacturer, Iron Founder, Iron Roof, Bridge, and Portable Building Contractor. IRON MERCHANT, &c. Offices, Arthur-street West, London-bridge; Works, Mill-wall, Poplar.

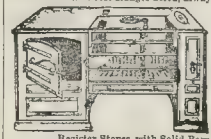
TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING. PLAIN, CORRUGATED, PAINTED, or GALVANIZED. Estimates and Drawings furnished on application. Experienced Workmen sent to all parts of the Country. MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.



TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Fencing, &c. To be obtained only at TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM. Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock. N.B. An allowance to the trade. Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS, THE BEAR GARDEN LEAD WORKS, SOUTHWARK. Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of UNITING LEAD TO LEAD WITHOUT SOLDER. Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal. PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.



IRONMONGERY. PFEIL AND STEDALL. THE LARGEST STOCK AT THE LOWEST PRICE, 5 AND 6, BROAD-STREET, BLOOMSBURY.

HART AND SON, IRONMONGERS AND MANUFACTURERS, 53, 54, 55, & 57, WYCH-STREET, STRAND, London.

DOOR HANDLES, CASEMENTS, &c. Illustrated Price-catalogues post-free on application.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch. A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self acting Cottage Ranges, with Large Oven and Boiler, 30 33 34 36-inch. 28s. 30s. 32s 34s. Best Self-acting Ranges, with Oven and Back Boiler, Bright Wrought Bars— 34 36 38 42-inch 54s. 56s. 58s. 60s. Strong Elliptic Stoves, with Extra Back and Solid Bars, per in. 2½d. Register Stoves, with Solid Bars, per inch, 5d. Improved New Pattern Circular Check Register, with strong Bars and Trivits, 5d. per inch. Best Solar ditto, with Fire Brick Back, per inch, 10d. Bright Stoves, with Two Fires, 40s. to 100s. each.

Cast Rain-water Pipe { 2 2½ 3 inch. 11d. 1s. 2d. 1s. 4d. per yard.
Cast Gutters—4 inch, 9d. per yard.
O G Gutters { 4 4½ inch. 1s. 1d. 1s. 3d. per yard.
Patent Line { 2 3 4 5 6 4½d. 5d. 7d. 9d. 1s. per knot.

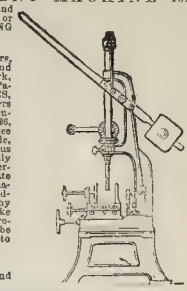
6-inch Rd. Ward Mortice, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt. Dr. Arnott's Ventilators, 4s. 6d. each. An extensive stock of bar, rod, hoop, and sheet iron. Brick Moulds kept in stock. Any size made to order.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each. J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices. 14, Stanhope-street, Clare-market, London.

JOHN PARKIN and CO. late BLAKE and PARKIN, NEW MEADOW STEEL WORKS, SHEFFIELD, MANUFACTURERS of CIRCULAR and MILL SAWS, IMPROVED CAST-STEEL FILES, for the use of engineers and machinists, PATENT PLANISHED MACHINE KNIVES and CUTTERS, manufactured for planing and grooving wood, for cutting paper, iron, stone, leather, &c. made to any pattern or dimensions with the utmost exactness. Warranted to work with a harder and finer edge than any other mode of temper.

INVENTORS of CORE-ANNEALED CAST-STEEL for tanp, piston-rods, &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST-STEEL, &c.

STEAM BOILERS for Marine, Locomotive and Land Engines, Wrought Iron Girders and Bridges, Gas Holders and Gas Apparatus, Columns, Girders and General Castings, Cables and Contractors' Iron Work, manufactured by MILLBORNE and HUSSEY, Phœnix Works, Tividale, near Dudley. London office, 76, Hatton Garden



PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled. Castings Warehouse removed from 31 to 68, Upper Thames-street.

COLLINGE'S PATENT HINGES,—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

ESTABLISHED 1817.

WILLIAM HARMER'S SMITHS' WORK, STOVE and RANGE MANUFACTORY, and IRONMONGERY, METAL, and ZINC WAREHOUSE, 19, Horsferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c. supplied with general Ironmongery at prices equal to all competition. Prices in London subject to future alterations.

Elliptic Stoves, with inside Backs, from 24 in. per inch. Parlour and Drawing-room ditto, ditto, 8d per inch. Bedroom Register Stoves, from 8d. per inch. Cottage Ranges, with Oven or Boiler, 32s. each. Self-acting ditto, with ditto, from 52s. Self-acting Oven and Boiler Ranges, with Wrought Fittings, &c. complete, from 45s. each.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms. List of Prices had on application at the Warehouse, or by letter prepaid.

WANTED, a SECOND-HAND CAST-IRON TANK, from 50 to 60 feet diameter, and from 14 to 20 feet in depth.—Letters to be addressed to the Secretary, Gas-works, Margate.

THOMAS EDINGTON, PURCHASER and INSPECTOR of CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 19s. 35 and 36, High Holborn.

TO ARCHITECTS.

PERSPECTIVES, Gothic and Classical, PREPARED and COLOURED, on very moderate terms, at the Offices of Architects, or otherwise.—Address, PHIDIAS, care of Messrs. Ward and Co. Stationers and Publishers, Paternoster-row, London.

PHOTOGRAPHIC SOCIETY.—To LITERARY and SCIENTIFIC MEN.—The offices of the SECRETARY to this Society and EDITOR of the "PHOTOGRAPHIC JOURNAL" being about to be united, Gentlemen who wish to become CANDIDATES are invited to send in their applications and statement of qualifications to the Honorary Secretary on or before the 22nd of JANUARY, 1856. The salary attached to the office will be 200l. a-year.

ROGER FENTON, Honorary Secretary.

21, Regent-street, January 10, 1856.

THE PHOTOGRAPHIC SOCIETY'S THIRD ANNUAL EXHIBITION will OPEN to the public on MONDAY next, JANUARY 7th, at the Gallery of the Society of Painters in Water Colours, 5, Pall Mall East. Open at Ten. Admission 1s. Evening, from Seven till Ten. Admission 6d.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 90, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to, Drawings and designs lithography in a superior manner.—Address, Mr. BOYS, 30, Albany-street, Regent's-park.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical or Perspectives not up; outlines of same neatly coloured, with back ground, &c. terms that will insure approval. Instructions given in getting up Plans, Elevations, Sections, Details, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone place

TO ARCHITECTS.

EXHIBITION and COMPETITION DRAWINGS, coloured or tinted, and superior LITHOGRAPHY, in its various branches, executed by Mr. T. J. RAWLINS (Author of Rawlins's Drawing Book), adopted at Marlborough House; Outlines of Sculpture; Modern Architecture, &c., 33, University-street, University College, London.

DRAWING CLASSES.—The Architects, Builders, Civil Engineers, and Machinists' Drawing Classes, conducted by THOMAS J. HILL, Architect, Offices 13, Old-street, City-road. Subjects taught—Architectural, Mechanical, Ornamental, and Perspective Drawing; Taking out Quantities, Abstracting and Valuing the same, Pen-and-ink Finished Drawings in Water Colour, &c. &c. Detail prospectuses to be had at the Offices.

DRAWING CLASSES.—24, Guildford-st. Russell-sq.—At this Establishment Pupils are thoroughly instructed in Architectural, Civil Engineering, and Mechanical Drawing; Ornamental, Perspective, and Water-Colour Drawing; Taking out Quantities, Measuring, Estimating, &c. &c.—Terms, One Guinea per Quarter. Prospectuses and full particulars may be had at the Offices.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSPECTION in Architectural, Civil Engineering, and Mechanical Drawing, Colouring, Shading and Tinting, Ornamental and Water-Colour Drawing, Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the fees include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guilford-street, Russell-square.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, Isle of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons desirous to correspond with them direct, that their ESTABLISHMENTS are No 3, Cannon-street West, London, and Pendleton-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. — Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

THE SEVRES GLASS COMPANY.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is recommended for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and Co.; when ground and dry, by Messrs. T. B. HORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 69, King William-street City; and by the Manufacturing and Painting Agent, Mr FREDK. BRADY, Pitsea Works, Newroad. In Manchester and Liverpool, by R. CLAY, 3, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bunk, and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21 and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA awarded to M. H. BLANCHARD, late of Conde's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country by our eminent architects and others, in the adornment of our noblest buildings, and is the only tried material that is capable to stand the ravages of the climate unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Panel-reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed street, Paddington.

Current accounts are received on the same principles as those observed by the London bankers. No Christmas-boxes or other gratuities are allowed to be taken by the officers of the bank. The bank also takes the agency of Joint Stock Banks, private bankers, and other parties residing at a distance. Cheques on paying stamps may be drawn from any place in the United Kingdom. Strong rooms are provided for the security of deeds and other property lodged by the customers of the bank.

Sums from 10l. to 1,000l. are received on deposit at the rate of interest to be fixed at the time, and they are repayable upon demand, without notice. If withdrawn within a month, no interest is allowed.

Sums of 1,000l and upwards are also received on deposit receipts, upon such terms as may be agreed upon, with regard to the rate of interest and the time of repayment. Parties may lodge money upon an interest account who have no current account, and those who have current accounts may transfer any portion of their balance to an interest account.

The rate of interest allowed at present on deposits of 500l. and upwards is 5 per cent.

J. W. GILBART, General Manager.

London, January 16 1856.

The dividend for the past half-year at the rate of 6 per cent per annum, and a bonus of 5 per cent. on the paid-up capital of the bank (free of income-tax), will be payable on Monday next, the 21st instant.

NORWICH UNION FIRE INSURANCE SOCIETY. (Established 1797.) Total Amount Insured £3,000,000l.

Insurances may be effected with this Company upon more favourable terms than with other Offices.

For prospectuses apply at the Society's Offices, Surrey-street, Norwich; and 6, Crescent, New Bridge-street, Blackfriars, London.

THE GRAMMAR OF ORNAMENT,

By OWEN JONES.

BEING A SERIES OF THREE THOUSAND EXAMPLES, FROM VARIOUS STYLES, EXHIBITING THE FUNDAMENTAL PRINCIPLES WHICH APPEAR TO REIGN IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.

ONE HUNDRED IMPERIAL FOLIO PLATES.

DRAWN ON STONE BY F. BEDFORD. PRINTED IN COLOURS BY DAY and SON.

To be published in Twenty-five Numbers of Four Plates each, price 10s. The First Number will appear on the First of February, and the subsequent Numbers be continued Fortnightly.—The Work when complete will consist of

Chapter I.	The Ornament of various Savage Tribes	3	Plates.	Chapter XII.	Ornaments from the Indian Exhibitions of 1851 and 1855	7	"
" II.	" Egypt	8	"	" XIII.	The Ornament of the Hindoos	3	"

" XI.	Ornaments from Persian MSS.	5	"			100	
		48					

The Author will endeavour in these several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles and those which are peculiar to each. He will further attempt in the 20th chapter to show how, bearing in mind these general laws which he finds also to pervade the works of nature, and returning to her for fresh inspiration, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times instead of blindly following in the footsteps of the past.

The collection of this vast amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, however, that while the collection of styles and all others engaged in may vary with the decorative arts will have before them an amount of materials which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. *Size, 8vo. royal.*

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

*** *Intending Subscribers are requested to forward their Names immediately.*

LONDON: SMITH, ELDER, AND CO. 65, CORNHILL.

In Two Volumes, 8vo. with nearly 1,600 Woodcuts, price 60s.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES, AND MINES:

CONTAINING A CLEAR EXPOSITION OF THEIR PRINCIPLES AND PRACTICE.

The Fourth Edition, much enlarged and corrected throughout.

"These volumes of Dr. Ure's consist chiefly of original and exact treatises, written with so much accuracy and care that they may be universally resorted to as authoritative,—as indeed the former editions have long been,—as the manuals of practice by British and foreign scientific writers. The author has throughout the entire work, and most seriously before his mind the object of promoting the best and most economical developments of the arts and manufactures; and has produced a work which altogether surpasses every other of its kind with which we are acquainted." *Mechanics' Magazine.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND IMPROVED EDITION OF MAUNDER'S TREASURY OF KNOWLEDGE.

In One Volume, fcp. 8vo. price 10s. cloth; 12s. bound in embossed roan, with gilt edges; or 13s. 6d. calf lettered.

PESCHEL'S WORK ON NATURAL PHILOSOPHY.

In One Volume, fcp. 8vo. with Woodcuts, price 9s.

ELEMENTS of PHYSICS.

By C. F. PESCHEL, Principal of the Royal Military College, Dresden.

Translated from the German, with Notes, by E. WEST.

Vol. I. Part 1. The Physics of Ponderable Bodies. 7s. 6d.

Vol. II. and III. Imponderable Bodies. 12s. 6d.

"We have translated, and in a manner, we trust, placed before his readers, in a clear and intelligible order, the main facts, even in their modern developed state. The work is a little encyclopædia of physical science, and we heartily recommend it as a book by which the public may profit." *Philosophical Magazine.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

The Builder.

VOL. XIV.—No. 676.

PERHAPS we may have assisted in drawing to the ARCHITECTURAL EXHIBITION some portion of that increased attention which it is receiving; and by which, we are happy to think, results will be realized, most important to the profession and to the advancement of our art. The connection of such an exhibition with the latter object, is no new point dwelt upon in these pages; and we are content still to displace other interesting matter, for the sake of furnishing to our readers an adequate notice of the works exhibited. It is, indeed, only through patient examination that one can gain proper evidence of the fact, which has long been sufficiently plain out of doors, to qualified observers—that a reserve of strength was existing in the architectural talent of the country, which lacked only proper direction and public appreciation. And, although much is required in the way of extension and improvement, we do not hesitate to say that the collection as it is, if visited for study, is one of the most valuable opportunities afforded during the year to the professional architect.

In our last notice,* we named some designs for the Taunton Assize Courts. There is a complete set of drawings of Messrs. Prichard and Seddon's design for this building, in a portfolio (580). The two courts are placed in line, on opposite sides of the plan, with judges' and magistrates' private rooms intermediate, and are reached through an octagonal entrance-hall. The latter has a pyramidal stone roof and louvre turret; and has in advance of it, an open carriage porch. The style is of late Gothic character, the materials being red brick and stone. In addition to the designs mentioned, for the Oxford Museum, Messrs. Travis and Mangnall's design, which gained one of the premiums, is shown in a set of drawings in a folio (581). The design differs from others, inasmuch as the museum roof is neither visible externally, nor is it wholly constructed of iron and glass. Square columns are placed on piers—the latter ranging with the glass cases—and support entablatures—thus dividing the space into large areas, which are lighted from the top. The style of the early Revival in Italy—or that distinctively termed Renaissance—is kept up throughout.

In Mr. T. H. Wyatt's "Design for the Extension of the Banqueting-hall, Whitehall" (435), by erecting a similar building for public offices, on the site of Gwydyr House, the entrance, with steps, is in a central recess joining the two buildings; and here, two portions of the plan are carried up as towers, and terminated by square ogee-profiled cappings, adapted from an old example.——Mr. S. C. Fripp exhibits three elevations (424 to 426) of his design for the new Town-hall, Hamburgh, which he has treated in a plain version of Italian, with arch-headed windows, modified by a high-pitched roof.

Mr. H. Horeau has, what he calls, a "Frontispiece of several Schemes and Sketches for rendering London and its Environs more salubrious and more agreeable" (372). The full title, which is too long to quote, mentions a submarine railway; a fixed balloon announcing the Universal Exhibition; fountains for Sydenham, with colossal figure of England holding the torch of civilization (the electric light); a bridge over the Thames in one span; his design for the Exhibition Building in Hyde-park; and a multitude of other projects, too clever and original to be passed by as valueless, yet marked by too much of eccentricity to be successful in point of art. The washy drawing exhibited is, however, not advantageous to the explanatory object.——The same architect also exhibits a view of a Museum and Schools for the site of Gore House (374), and an interior of the Hall of Antiquities and Exhibition Gallery of the same project (373). Iron construction is here used, the roof being arranged as a line of low domical lights,—the pendentives, and some other soffit spaces being enriched with paintings.

Mr. W. Papworth's "Design for Curator's Residence and official Apartments, connected with such a Municipal Library and Museum as might be erected in Smithfield for the City of London" (155), is an elevation of a two-storied façade with superimposed orders, and large Venetian windows, and with dormers in the roof.——The several designs for the Sheffield School of Art, deserve careful examination, illustrating as they do the growth of novel versions of styles—in contrast with the approved Italian, held to by some of the competitors. Amongst this latter number, Mr. G F. Jones (92) adopts the form of rusticated basement, and over it Corinthian pilasters and three Venetian windows, with figures on their arches; the building being terminated by a balustrade and statues.——In Mr. Nicholls's Design (252), also in the Italian style, a long panel is introduced, to be filled with a bas-relief, illustrative of the Arts of Sculpture, Architecture, and Painting: three brackets being designed for busts of Flaxman, Wren, and Reynolds. The sculpture was proposed to be competed for, as the prize subjects, by pupils of the school.——Mr. P. E. Massey's Design (342) seems to be for the same building, and has little in the way of modification of the ordinary type,—though a good central feature is designed to the upper story, where the pilasters are clustered on each side, and carry a segmental pediment.—The other designs, however, depart in a very marked degree from known types, and with some obvious gain, though whether an unmixed one we are hardly prepared to decide. The designs by Messrs. Weightman, Hadfield, and Goldie (343 and 377), and Mr. G. Corson (420), agree in their exaltation of *novelty*, as an object. Thus with them, the usual combination of mouldings in a cornice,—the cyma, corona, and enriched bed mouldings, with a carefully adjusted height of frieze, is exchanged for a form of section in which square members (too massive to be called *fillets*) hold chief places. Some features of the designs would almost seem reproductions from timber buildings. Mr. Corson chamfers the lower edge of a crowning member of the sort referred to. He supports it by coupled cantilevers. His principal, or one-pair story, has five arch-headed windows, set quite close, with shafts. The walling above is enriched with four circles of coloured marble, and a string-course of ornamental tiles. The ground-story has arched entrance-way at the side—with enriched spandrils and columns—and two arch-headed windows, between two smaller windows, square-headed. At the three piers of this group of lights, in each case, is placed a statue under a canopy, and on pedestal.

In the pursuit of novelty—as exhibited in designs of this class—the precedent of the Cinque-cento school should not be treated with indifference, for it presents carefully-matured proportions and harmonious combinations, elaborated by those who, it may be conceded, have devoted perhaps more consideration to such matters of detail than any architects who have lived. It is not necessary to qualify the favourable opinion which we intended to convey, of the excellent designs mentioned; but, occasionally, we observe that the desire of novelty is allowed to have undue preponderance, where beauty and good taste might demand a form very different from that adopted, and perhaps one that had been long familiar. Our art is in a hopeful, and yet a critical position; and architects (and those of active fancy not the least) must take care that in cultivating one element of *art* long neglected, they do not re-illustrate the position which we have so often met with in the history of architecture,—where, in the endeavour to escape one description of influence (that is to say, predominant novelty, or predominant "precedent-rule"), the excess of one necessary element has been exchanged for the excess of another. We believe, however, that we see the commencement of a period of progress which will reach a measure of success far beyond what has been achieved by the principal architects of the Anglo-Italian school. The great errors in the works of these, arose from not prominently regarding the uses of the structure. The study of Gothic architecture has since worked the correction. In many celebrated buildings, the very persistence in the forms for which there was precedent, has destroyed the beauty of these altogether,—since instead of being designed *pari passu* with the structure, they are rather used—pieced out, or cut to it. Wren was not free from some of these defects in his works. They are to be observed even in the interior of St. Paul's Cathedral, about the arches which support the dome. To go no further,—we may allude to one defect,—the mitering of the outer members of the archivolts. Structural principle, the foundation of architectural *art*, would have required that these chief members should be in some way supported. The advancing school of architecture would now do at least differently from Wren, and very justly. Supposing that the impost or capital did not allow space for the descent on it, of the principal members of the archivolt, they would simply adopt *different mouldings*. A bold roll moulding, for example, might be placed near the inner curve of the arch; and outer members of the archivolt, rendered secondary, might then be allowed to mitre without fear of ill-effect. But this would not have been to the Cinque-Cento precedent. Nevertheless, such practical solutions of difficulties may be essential to the result in point of *art*; but they require that the designer should be ready with the pencil, and qualified otherwise in what even Wren perhaps did not possess.——The remainder of the designs for the Sheffield School are marked by an extensive use of polychromy. Indeed, in Mr. A. Billing's design (143), it may be regarded as the principal aim, "marbles of various colours, either real, or imitation on glass,"—being proposed for the shafts of the columns, the panels, and the floriated ornament. The design has superimposed orders, large segmental-headed windows, and a curved pediment in the centre, and is by no means without merit.——One of the designs to which the second premium was awarded (343, before mentioned), has a basement story, with three wide arch-headed apertures, and broad pilasters to the piers. In the next story there are pilasters of lesser diameter—panelled, with painted ornament—and the inter-pilasters have long arch-headed windows coupled, with a head over each central pier. The top story is lit at the back from the roof, and the space which it occupies in the elevation forms a deep frieze supported by plain corbels, which has six panels, to be painted in fresco. In the plain block cornice, colour is again introduced. The design, No. 377, by the same architects, provides for the use of red, black, and other bricks; green, blue, red, and yellow tiles, and stone for shafts, labels, and strings. The lower story has three large openings, each semicircular arched in three orders, the windows having mullions, and circles in the head. Over each

* See p. 4, ante.

arch is a circular panel, filled with an ornamental pattern in colour. The windows of the one-pair story form a range of small arches, with stone shafts: above this are segmental arches corbelled out; and the building is finished by broad faciæ and cornice,—the coloured tiles being there freely introduced.——Mr. F. T. Gompertz's design (436) makes use of semi-circular-headed dormers in a curb roof, with hip-knobs of excessive length.——Mr. J. L. Pedley's design (437), has semicircular pediments to the windows.——These designs for the Sheffield School of Art are, however, as we said, all valuable, as illustrative of the tendencies of existing taste.

In schools and educational institutions of the ordinary kind, we again meet with the Gothic style as an exclusive one. It is impossible for us to notice all the works which are exhibited. Mr. H. Clutton, in "Buildings for the new Schools to be erected at Ashford, Middlesex," for the Society of Ancient Britons (116), and in "Buildings formerly intended for the National Society's Training College" (117); Mr. Edmeston in the "Schools and Residence at Stockingford, near Nuneaton" 106); Mr. G. R. Clarke in similar buildings at Coln, Great Aldwyn, Gloucestershire (139); Messrs. Habershon, in schools at Erith; Brighton; Lilford, Northamptonshire; Walworth; Idsworth, Hants; Boughton Monchelsea, Kent; and Hampstead (168); Messrs. Gabriel and Hirst, at Keynsham, Somerset (188 and 224); Mr. W. White, at Wantage (245 and 246); Mr. C. Baily, at Hawksworth, Notts. (255); Mr. F. Barnes, in New School Buildings and Library at Harrow (380 and 397), where the dressings appear to be all in red brick; and the same architect at Hadleigh (387); and Mr. E. Nash, in the South Metropolitan District Schools at Sutton, Kent (534), are amongst the chief exhibitors.——Mr. Murray gives a Design for the Belfast Presbyterian College (42), with oriels, and a square-capped tower. A design by the same architect, is entitled "Schools intended to be erected at Leamington;" whilst Messrs. G. R. Clarke and W. J. Worthington exhibit (14) "National Schools and Residences at Leamington, as contracted for." Which is to be considered the successful design, even had we heard both sides of the question, it would, perhaps, puzzle us to say. We believe both architects claim payment for their work. The resemblance which there is in the designs, may be easily accounted for: there is slight variety in many buildings we might mention.—— Mr. R. Hesketh and Mr. G. O. Lane are almost the only architects whose schools are not Gothic. The former gentleman exhibits (419) the Golden-lane School, of St. Thomas's Charter-house. Mr. Lane shows (59) his Design for the Central London District Schools at Hanwell, in which he had a long range of Venetian windows, grouped together in the several stories, and rising above the eaves with segmental pediments. There is a dome to the centre of the building; and square blocks of building at the ends, are surmounted by low lanterns domed over.

The predominance of perpendicular lines which characterizes the design last-named, is carried to excess in another of the same architect's competition designs. This last (66), submitted for the Jews' Hospital, Mile-end, has windows of character similar to the others, and a portico formed of square columns, coupled.——Mr. Lamb's "Consumption Hospital now erecting at Funchal, Madeira" (76), deserves attention for the excellent grouping of its main divisions, and of its roofs.——There is also a view of the same architect's Sanatorium for Consumption now erecting at Bournmouth (192).

The principal drawings of buildings for business purposes illustrate the class of warehouses. Messrs. Devas, Minchener, and Routledge's warehouse, in Cannon-street West, is exhibited (22), by Messrs. J. Griffith and H. Dawson. As we have heretofore observed, it is one of those buildings which display a marked advance in the architecture of our time. But in invention, and in every quality of art, it is greatly inferior to the works which have given a new character to the town of Manchester, some of which are shown in a beautiful drawing (107), by the architect, Mr. E. Walters,—"Commercial Buildings lately erected," &c. The principal building of the three shown, has been illustrated in the "Companion to the Almanack." What is perhaps the best of the works is seen only in part. The warehouse in brick and stone, is effectively treated in the novel doorway, and the windows of the lower stories grouped under the arcade; and the canted angle is especially well managed. This drawing was originally prepared for the French exhibition. The architect's application to the appointed office in London, for space, was, however, met with a blunt refusal. We believe that no blame attaches to the committee of architects; but as the same thing is said to have occurred in other cases, the circumstance is annoying,—considering also that there did not seem to be much want of space at the exhibition itself.——The warehouse erecting at Manchester, for Messrs. S. and J. Watts (55)—Messrs. Travis and Mangnall, architects —has a length of no less than 300 feet, a depth of 90 feet, and an extreme height of 115 feet: it will be wholly faced with stone, and is to cost, exclusive of land and fixtures, 45,000*l*. The general style is that of the Renaissance. The sixth story is lighted from the roof; and portions of the building are carried up an additional story, for the sake of effect. The design is not very satisfactory The drawing, it is true, is an unfortunate one; for the bricks of Lancashire can hardly be so red, and the Yorkshire stone of the warehouse itself, can hardly be so yellow as they are shown. But, the details seem to us weak in design; the heavy and blind top story, over a range of large windows, is questionable; and the range of gables which crowns the structure, even ugly. The entrances are in good taste, and portions of the rusticated work display care. We may be under the influence of the drawing—for that will go a long way—but are very apprehensive.

Mr. Brakspear's warehouse erecting in John Dalton-street, in the same town (194), has Italian details of more familiar character, but well studied and designed. The lower story is treated as an arcade, and the doorway has much merit.—— In the same town, Mr. A. Waterhouse is erecting offices and stores for Messrs. Binyon and Fryer (63). The upper half of the front is built of red and white bricks, in chequers. The offices are on the first-floor, with a range of windows, with iron shafts coupled in the thickness of the wall.

The buildings which have been erected recently for public companies, and similar purposes of business, are so important, that the exhibition does not present a proper reflex of the architecture of the day without them. In our own pages, the building at the end of Chancery-lane, and the insurance-office in Fleet-street, are to be found; but the only work of the class which is represented in the Suffolk-street collection is Mr. J. J. Cole's "Offices" in Throgmorton-street (447),—which we have also given.

There are fewer drawings of banking-houses than last year. Mr. Truefitt has erected a new room in the yard at the "Old Bank," Blackburn (195), where there is a "lean-to" roof, in the trussing of which a perforated leaf-work pattern is introduced. This room is, we believe, the work for which Mr. Ruskin was said to have been applied to for designs; but the completion without his assistance seems to show that the original arrangement was not carried out.

There is an equally marked deficiency in the number of designs for railway stations. Various portions of the Paddington and Windsor stations of the Great Western Railway—some of the former having been illustrated by us—are shown by Mr. M. D. Wyatt (79). The end of the transept, which we engraved, requires the decoration in colour for its due effect. Other decorations of an elaborate character have been designed for the private rooms of her Majesty: and designs for a standard lamp, and for pavements, are shown in No. 337.

We have also engraved in our journal the view of Walls' Court Farm, erected for Thomas Proctor, Esq. on the estate of the Duke of Beaufort, which, with a sketch of Mr. Proctor's residence, and that of the bailiff, is exhibited by Mr. Godwin (118). No. 23 is a view of a covered homestead in course of erection at Haines-hill, Berkshire, under the superintendence of Messrs. Beadel, Son, and Chancellor. In this department, as in others, there are fewer designs than should be found.

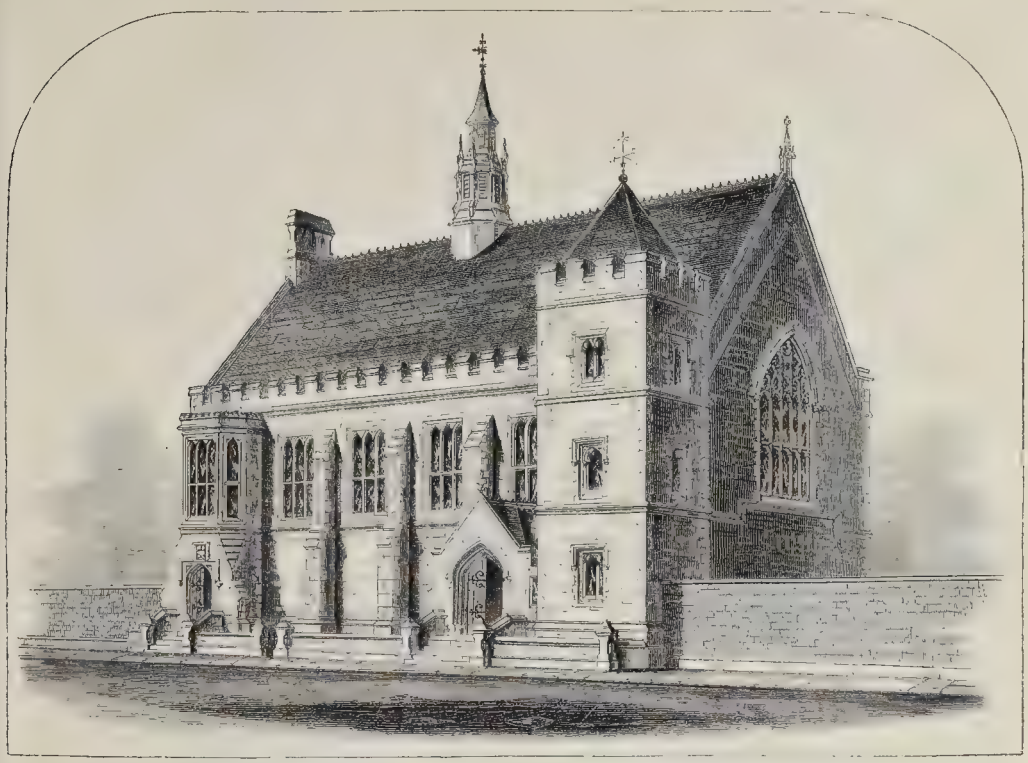
We allude to these deficiencies, because—just as was the case last year—some of our contemporaries have put forth very erroneous, if not pernicious, views, with reference to the works in the gallery, and their relation to existing taste.

THE LIMERICK PROTESTANT ORPHAN SOCIETY.

THE Limerick Protestant Orphan Society was founded in the year 1833, mainly through the exertions of the late Rev. J. C. Fitzgerald, and has for its objects the maintenance, education, and apprenticeship of destitute Protestant orphans. The society has made steady progress since its formation, and numbers amongst its supporters the majority of the Protestant gentry and clergy of the diocese. The late Rev. Godfrey Massy, vicar of Bruff, was especially distinguished for his labours on its behalf. The number of orphans at present under its care amounts to about 250, and the annual income is upwards of 2,000*l*. One of its principal sources of revenue is an annual bazaar, and the difficulty of obtaining suitable rooms for that purpose, as well as for the several public meetings, &c. has led to a proposal for the erection of a building, to be called the Limerick Protestant Orphan Hall, to be also available for other religious purposes. A considerable sum having been subscribed, the design of Mr. W. Fogerty, of Limerick, was selected in June last, since which time the works have been commenced, and the walls of the basement story completed.

The design (a view of which we give) includes a great hall, 81 feet by 44, with two entrances from the street. The principal doorway gives access through a porch to the hall and to the staircase, carried up in a square tower at the angle, which communicates with light galleries on three sides of the building. The other entrance has also a porch, the upper part of which is formed into an oriel window. The hall is lighted at the sides by ten large three-light windows above the level of the galleries, and by a traceried window of five lights in the end.

The basement contains two large school-rooms, committee-room, and apartments for the caretaker, and is lighted by means of areas in front and rear.



The walls are being built of the local light-coloured limestone in uncoursed rubble work, neatly hammered on the face. The dressings, quoins, &c. are being executed of the same stone, chiselled or punched. The roof is to be open, and, as well as the rest of the woodwork, of stained deal. A large louvre is provided in the roof for ventilation.

A sum of 900*l*. has been already expended in the purchase of site and carrying on of the basement story, and a further sum of upwards of 2,000*l*. will be required for the entire completion of the building.

THE FINAL BUILDING ACT.

As the miserable remnant of structure concealed under our counterfeit architecture has begun to draw remark even in the daily press, and we have French engineers and builders asking, in the *Times*, with courteously concealed sneers, why English builders, with less timber at hand than any others, are the only ones who cannot build without entire dependance on deal sticks (or, I may add, English engineers, without the still more puerile and inconceivably uninventive expedient of casting the unlimited iron their dupes allow them into *artificial sticks*), it seems, at length, time to draw up the curtain and expose the root of all this degradation. Though, like many another lesson, learnt too late, alas! to benefit ourselves, in this "wilderness" (as Kingsley says) "of man's making, not God's," it may be not altogether thrown away on our neighbours, upon either side the Atlantic; or they have more dust in their eyes, and are far nearer our own state of supercivilization than I imagined.

Let any one, then, who marvels at the mighty

LIMERICK PROTESTANT ORPHAN HALL.——MR. W. FOGERTY, ARCHITECT.

nineteenth-century English nation possessing no permanent or even fire-proof buildings, for the noblest purposes—churches, libraries, museums, galleries, town-halls,—while the "barbarous" Arab, Hindoo, and even African, have for ages raised, not only public edifices, but whole cities of dwellings, that spurn all the elements, and depend on no repair;—let him know that the immediate reason is simply this. Though England as a nation be interested to the extent of many a round million of her dearly-beloved £. (to say nothing of other interests not expressible in that denomination) in having as many fire-proof and decay-proof buildings, and dwellings too, as France, Russia, or Asiatic countries; yet it has ceased to be the interest of any man in England either to build or invent them; by which I mean, that no money, thought, or time spent on their contrivance or erection, however valuable to the nation or neighbourhood, ever will or can, in the present state of our laws, be worth one penny to the erectors or contrivers themselves.

That sounds strange, doubtless; and some will say, surely it is natural, or they may even say, "necessary," that what is anywhere decidedly profitable to society, should also be profitable enough to some members or member of it, to be worth his devising. Yes, sir, it is *natural* that it should be so, but not *necessary*. It has been so everywhere,—it is still so in most countries,—naturally, but not by any necessity;—only by the operation of certain laws, contrived for this and other good purposes, I cannot tell you how long ago, by a certain ancient Ruler (very eminent, too, as an Architect), which are still in force over great part of the civilized world; and whose effect, on this matter of building, was once defined by a writer of Jewish extraction, in these terms:—"If any man's work be burned, he [not society observe,—not mankind, nor the nation, but *he*] shall suffer loss."

Now this, sir, is still the exact effect of those old laws, wherever they continue in force and are not evaded; and another curious effect is found to be, that in all those places, men's buildings have constantly improved in stability and true economy, and fires and repairs in them as constantly decreased, till, in many Asiatic places, the former became, and even continue to this day, unknown; the very dwelling-houses being fire-proof and so independent of repair, that their erection is actually, like that of good public works (such ones as no English city has seen since the Middle Ages), a gain national, and not merely individual. On the other hand, wherever these laws, or the above first-mentioned effect of them, may have been superseded, you will find the whole system of structure, in private buildings immediately, and in public ones too, very rapidly, plunged into a state which I will not describe, because to your English readers I need not, and to foreign ones I do not choose;—a state from which, suffice it to say, that while the sentimentalism of a Pugin or Ruskin may rescue a few works of pomp or romance among the mere *dilettante* excrescences of our civilization,—the Cheops-Pyramids of it,—the monuments of its "pride, fulness of bread, and abundance of idleness,"—the proud-flesh of its wounds;—yet there can be, for its muscle, its *realities*, no such galvanic resurrection; cities remaining, under their still-growing and more and more tawdry disguises, no better in reality than camps (as the *Times* article said) of wigwams; buildings tumbling down during erection; fires ever on the increase; Building Acts upon Building Acts, in ponderous array, trying to limit precisely how bad all the work shall be; and lawyers and surveyors haggling over new ones, themselves more ephemeral even than the crazy piles they are to regulate.

But, it will be asked, are the laws then which that Ruler so architecturally contrived, anywhere repealed? No, not by the Authority that passed them: but their effect as regards this matter of building, sir, is most effectually superseded by a collusion of this kind.—Let A. B. and C. be three parties, of whom A. has a house, B. is in command of a long purse, and C. of an army of 100,000 men. A. and B. lay a wager on the contingency of A.'s house being burnt down within a year; that is to say, they engage that in the event of such a fire, B. shall forfeit to A. a certain sum; and in the more probable event of the house escaping fire for a year, he shall receive a certain sum, which being far smaller is at once deposited by A. in B.'s own hands. But, then, who is to insure him the fulfilment of B.'s part of the wager, should B. lose it? No party but C. has power to do that; and as the continuance of this power depends entirely on C.'s character for good faith, A. finds it worth while to purchase of C. a promise that B.'s payment of the wager shall be enforced if necessary; and C. in consideration of a sum paid down by A. proportioned to the amount of the wager (and somewhat greater than A.'s stake in it), sells him this promise. Thus there are three parties to this singular covenant,—the name or seal of each appears on the document witnessing it,—and with less than three I believe it was never yet thought worth drawing up.

So far all is fair: each has a right to do what he will with his own, and if all the things he deals with really *are* his own, their right must be unquestionable, each to make the best bargain he can. The value of a thing is just what it will fetch,—the laws of supply and demand are, &c. &c.—and all we can say is, that the more they enable C. to obtain for his promise the better for C. and (as we shall presently see) the better also for the public. The more expensive the whole business can be made to A. the better.

But now suppose C. to have previously en-

gaged, by the most solemn oaths, to prefer, for no consideration whatever, the interests of any one sooner, to the interests of the nation whereto A. and B. belong, or rather wherein they dwell. This would surely alter the whole case: for it is plainly against the interest of the nation that wagers or gaming of any kind should be encouraged in it, but especially such a wager as this. It is utterly against the common weal that A. should thus be able to *insure* to himself the *worth* of his house, without insuring *the house itself*. It is manifestly the interest of society that no man should have any means of insuring the value a thing bears to him, *except by insuring the existence of the thing itself* in the world. It is the public interest that every loss by fire, or other *preventible* disaster,—every accident that is not in the strictest sense of the expression, "by act of God," but only by act (or neglect) of man,—should fall solely on some one who *might have prevented* it,—and not as an *imperceptible* loss on *many*, but a *ruinous* loss on *one*; as Divine Love has, by all the laws of nature, ordained and provided. It happens so naturally, but not necessarily; not because two and two are four, but because some Person will have fewer accidents and more thought, and fewer selfish rascals in the world; and because lime and sand, and stone and iron, and wood and brick-earth, are His handiwork, and by their properties and relations praise Him and magnify Him for ever.

Well, then, if C. had taken any such oaths as we have supposed, it seems plain that C. would be quite misadvised in becoming a party to any bargain of this kind. For as often as the umpireship and defence of such a wager is undertaken, by the affixing of C.'s name or seal to the document witnessing it, so often is there in *fact* (whatever there might be in intention) a bargain and sale to A. and B. of the interests of the rest of the nation, which (by our supposition) C. had sworn not to sell to anybody.

Now, in modern English, the wager and document here described are called an Insurance Policy: the three parties to it are called, A. the Insured; B. the Insurer; and C. the Crown. The signature of the last is called the Stamp. The stake of A. which is deposited with B. is called Premium; and his other payment to C. for engaging to be umpire, that is to say, the bribe required by the latter for making this sacrifice of the national interest to that of A. and B. is called, most incorrectly, Insurance *Tax*, for it ought, according to all the analogies of our language, to be spelt Insurance *Bribe*.

Towards the end of the late peace, there was some agitation among the most deluded classes for what would be called a repeal of this insurance duty; that is to say, that their interests should be sold for nothing, instead of about 1,200,000*l.* a year,—Government relinquishing the bribe, *while continuing the injustice* that the bribe is paid to purchase;—a reform, thoroughly in accordance with the course of British law-changing in greater matters, from the Tudor days downward. The wrong has gone through its term of naturalization, doubtless,—the years that suffice to make wrong right,—a "vested right,"—a matter of property,—property like that of the Cadarenes in their swine; of which Voltaire says it was an Englishman that taught him to ask (for truly none but a Saxon would have thought of the question), "Did Christ give any compensation to the owners for destroying their property?" Wouldn't we have made Him pay for them—lawful beasts or unlawful? There should have been damages, and law expenses to boot, or we would have known the reason why.

Well, to return to our Insurance 'Duty,' there was some 'ventilation' of the matter, but, happily, war and a war-budget came in time to prevent this further confusion of bitter for sweet and sweet for bitter; and, thanks to the Czar Nicolas, our laws still recognise a difference between a commercial contract and a wager; still deny any obligation upon her Majesty to act as an umpire of bets; and still leave a gaming agreement, that has not received her stamp, to be binding only in honour, not in law.

What is required then to stop the downward course of our building, and restore this art to its normal and *natural* state of progress, instead of degradation, is simply a law to this effect, that 'Whereas it is highly inexpedient and contrary to the common weal that her Majesty's courts should undertake, for any consideration, the enforcement of any gaming or betting contract, but especially of any that is made contingent on the event of a conflagration, or other preventible accident; and whereas it has, nevertheless, been customary, for and in consideration of a payment called Insurance Duty, to place a stamp on certain agreements of this kind, and undertake the enforcement of them; be it therefore enacted, that after the —— day of ——, no such stamp shall be affixed, and no such agreement, except those already bearing a stamp, shall be of any legal force.'

That, sir, is the only "Building Act" for us. With that once passed,—and it *will* be passed, or a still shorter one, another day, by the then rulers of the island now called Great Britain,—with that passed, all the rotten lath and plaster will be seen beginning to transmute itself into as sound materials as the shade of Pugin himself could wish;—without it, never, though Building Acts be multiplied till we cannot produce paper for all that are required. Now, as this *must* come sooner or later, it would save time, and might be found to help save something else, if it were done this very year 1856. We have no right to assume it will *not* be so. What right has any man to assume that those who are shown right will straightway do wrong?

But the revenue! the revenue! I hear it exclaimed. Do you think a Chancellor of the Exchequer is going to throw away a million and a quarter in war-time on a point of abstract justice? Certainly not, most practical reader. But we have a short way of settling that, and so we will see whether it is the revenue question that stands in the way. The Chancellor of the Exchequer shall hear of a substitute fully capable of making up the 1,200,000*l.* and more too, and satisfying, at the same time, the most critical sense of justice. When it was imagined that coal-smoke had destroyed St. Paul's, coal was made to rebuild it; and the same idea has, I believe, been carried out in other cases with more reason. Now, if shallow men will insist that the change above suggested would be a boon only to 'architectural or building interests,' it is fair to answer them according to their folly, by telling them (in their own superficial sense) that we are going to propose these 'interests' alone should pay for it. But for those who look a little deeper, and acknowledge that whatever this matter costs, or shall cost us, is only the just penalty for our fathers' and our neglect and selfish indolence, in admitting the fallacy above pointed out, let us observe that to this *one* fallacy we owe bad building; to bad building, bad architecture; to bad architecture, *architectural disguises*,—the most costly and mischievous of all our luxuries, with the sole exception, perhaps, of gin,—the most utterly useless and unornamental of any, without even that exception; and the *only one untaxed*.

Now, an 'Architectural-Disguises-Tax' is as easily assessed and levied as an Armorial Bearings-Duty (which it most resembles in principle), or rather a Window-Tax, which it would most resemble in productiveness. Let us see.

Schedule A.—Plain Disguise, in Towns only.—For every plastered external surface of wall, within the limits of any city or borough, —s. —d.

If the horizontal dimension of the surface exceed a yard, double the above; if two yards, treble it; and add an equal tax for every yard exceeded.

If it include two stories in height, double the amounts above found; and make an equal addition for every additional story.

Schedule B.—Figured Disguises, in Towns or Country.—For every mass of plastic material, or covered with plastic material, projecting from a wall, whether the wall be plastered or not, —s. —d.

If the greatest dimension of the mass exceed a yard, double the above; if two yards, treble it; and so on.

If the seat or outline of the mass upon the wall have more than one re-entering angle, imagine it divided into the fewest possible pieces, with no re-entering angles, and charge them as distinct masses.

That this Pomp-and-vanity Tax could be made to raise, from existing buildings, as much as the old Air-and-light Tax, is not pretended; but little more than half that amount is all we need for the above purpose, of ascertaining whether it is the Czar or some nearer foe or foes, that stop the way to good building.

Of course, such a tax, were it ever so small, would have the collateral effect of instantly suppressing all future disguise of this kind, as completely as Pitt's Hair-powder-Duty put an end to that elegant refinement. This is only what all real architects desire, and all payers for building would have insisted upon, years and decades of years ago, were it only possible to bring these things before their mental vision. It is simply the difficulty of getting their owners to *look at* them, that perpetuates these absurdities. Now, for drawing attention to a thing, there is no writer like the tax-gatherer. A most powerful prompter of thought is every new line from his pen. *He* will get a thing looked at.

And truly, sir, apart from the justice, above suggested, of making these follies pay for their own funeral, and that of Sham Insurance their mother, we may challenge any one to produce a vanity from which it seems so unquestionably the duty of a Chancellor of the Exchequer to raise every farthing of revenue obtainable. In all the late attacks on it, I have nowhere seen observed this peculiar fact about counterfeit architecture, that it is the only luxury for which no single palliation has been alleged, but only evil continually; harm physical, harm æsthetic, and harm moral. All others have either some microscopic particle of good in their origin or in some remote accidental effect; or, at least, some class to whom, in some one point of view, in mind, body, or estate, they are harmless. Alcohol and tobacco are gifts of God, and for man's good, doubtless, blaspheme about them as he may. In hair-powder it would puzzle one to find any moral, or in armorial bearings any physical evil. Both hurt their owners, but no one else, that I can see. But here we have a wholly untaxed article of pomp, absorbing millions a year more than those or any others; utterly unmotived unless by the most vulgar and ridiculous ostentation; and with no conceivable effect to any class but mischief—mischief to those who have, and mischief to those who want these things; mischief to those who make, and mischief to those who pay for them; mischief to those who like, and mischief to those who despise men for liking them.

E. L. G.

PROFESSOR COCKERELL'S SECOND LECTURE ON ARCHITECTURE.

In his second lecture at the Royal Academy, on the 10th, the Professor said, on the annual recurrence of the present season, when he had to prepare himself for the performance of that evening's very agreeable duty,—when he was relieved, for a short time, from the turmoil and bustle of this vulgar world, and was enabled leisurely to contemplate the noble and important art which they had in hand; to view its deeply-interesting history and expand the wings of imagination upon its delights, and dwell upon its openings up of the sublime and the beautiful, he felt himself almost overwhelmed by the conviction of his incompetency to represent the dignity of so noble a science. When he looked at the ingenuity of mind required; the mathematical attainments, the natural endowment of sensibility, the taste, the invention, the poetical imagination, the genius which were essential, he was really appalled; and he took courage only in the grand principles asserted by the masters of the art; and in reliance upon the candour of his hearers, and in the admission that all were bound to make, that while descanting on so glorious a subject, they were by no means required to be masters of all its departments. So entirely did the Academy of France appreciate the extent of the difficulty of the art, that to carry out instruction in all its parts, they had established three special professors of three departments of architecture. The first was a professor of The Theory of Architecture; the second, of The History of

Architecture; the third, of the Statics of Architecture; and during the season they had many lectures, as well as direct teaching. Many of the scholars were sent to Rome and Germany for five years, at the expense of the Government, the Government having a claim upon their talents at all times. Thus the French Government never lost its hold upon those who had derived advantage from its patronage.

They ought, in directing their minds to this great art, to approach it with all the respect, humility, and circumspection which a subject so grave required. Proficiency in it was in a great measure to be attained by study and by genius, —by disinterested, long, and faithful pursuit of books in the first place. They should study the works of Blondell and many others which would at once occur to their minds. Again, this art was to be cultivated by careful travels; by observations in travels at home as well as abroad; by seeing monuments in their proper sites; by emancipation, as far as possible, from the ordinary business of life; and by that leisure which enabled the mind to expand into those speculations and day-dreams which constituted the delight of the architect. But then, from the art itself, to go to the great practitioners of the art,—to their interesting biography, and the benefits which their genius had conferred upon society; creating, originating, promoting the arts of industry and civilization, the union of a vast variety of knowledge, and the benevolence which it had brought to bear upon their creations; so that they might feel all the force of the language of an ancient writer who had no higher epithet to apply to the Maker of all things than "The Great Architect." There was, indeed, one individual to whom they might apply the title "architect" as the architect of his own fortune—Sir Christopher Wren. He was a scholar from his childhood; a great mathematician at thirteen; professor of astronomy at Gresham College at twenty-one; at thirty-seven, surveyor-general to this country and kingdom; and after the Fire of London, at forty-three, appointed to St. Paul's; the principal founder of the Royal Society, and the largest contributor to it; the founder of the Commission of Sewers; the sustainer of schools of art in the Society of Freemasons,—then acting in their original and proper character as builders; the friend and counsellor of the king, and of the wisest in the State; and the chief benefactor of his country. It was wonderful to contemplate such a character, and to consider that he had left, for special study, structures which could not fail to delight and instruct those who were familiar with his works. Many of Wren's works were without parallel in foreign parts, and were cited by the French as constituting our best title to the possession of taste in architecture. His works were more or less published, and his friend, Mr. Clayton, whom he had the happiness to assist, had added a great deal to what was before known. There were many works still unpublished, and he would recommend to them, as conferring a benefit on the profession, that they should, when opportunity offered, so prepare them as to give them to the public. The age of Sir Christopher Wren was one of peculiar magnanimity in all that affected art and science, while every succeeding age had brought us to that commonplace and plebeian mediocrity with which so many at the present time were content; so that we were now beginning to be considered, in all that belonged to the fine arts, as inferior to other countries. In his (the lecturer's) late visit to Paris, he had had the advantage of a critical view of the architectural monuments of that famous city, in company with one of the first architects of the day. Putting aside the advantages of clime, and of material exemption from smoke, which conferred so great a lustre on the works of that city; and waiving all that distinctive talent for ornamental design, in which the Italians themselves confess the French to excel, he would challenge their pretensions to the graver merits of architecture, and would discuss deliberately with them the beauties of St. Paul's, Greenwich, and other works of Sir Christopher Wren and Inigo Jones, in comparison with their own, as far superior in harmony, unity, variety, invention, and taste. In his first visit to St. Paul's, after returning from Paris, he was especially struck with the dome and towers of that building, which, seen from Fleet-street or Ludgate-hill, at about eleven o'clock on a summer morning, presented one of the most striking views in Europe. St. Paul's was without a rival in its beauty, unity, and variety.

The position of the consistory and morning chapels, the mode in which the aisles were finished with hemispherical domes, and, in particular, the novelty of the contrivance of the windows within the apse, by which the light penetrated into the building after the Gothic mode, was peculiarly striking. There was all the strength of a pier, all the grace which such an apse must give, and a lightness which he believed was unique,—for he had found such a combination nowhere else. It was commonplace to point out to them the absolute novelty of making a dome equal to the width of the whole church, instead of the usual mode of making it equal with the nave. It gave him great pleasure to find in the work of the Rev. Mr. Petit, great commendation of the first model of St. Paul's. When they proceeded further to consider the economy of the structure, its contrivance throughout for sanitary and meteorological purposes, its grace and ornament, a judicious mind could not but rejoice in so marvellous a building in our country as conferring a lasting renown upon us. The building was remarkable for its adherence to rule and the masonic laws. With regard to character and taste, St. Paul's was a remarkable instance of combination. Sometimes the elements of the sublime and just were handled with a strangeness of proportion and physiognomy, or with some extraordinary audacity, as in Boronini, Michelangelo, the chief of the Italians, and a great many among the French. One man surprised and alarmed—created terror and astonishment—by a sort of clumsy power; but Wren was an artist following Nature, in whom they found no extravagances or excesses of power: all was correct and harmonious.

In the Gothic an unearthly attitude was frequently attempted, and in much of the French architecture they found an overstepping of all masonic rule. Such extravagances might transport with their novelty, but they violated the correct spirit of masonic architecture. Wren always trusted to the natural character of his contrivances, and the perfection of his equipoise.

No architect of Europe in his day understood better, or more highly appreciated, the merits of Gothic structure. Witness his surveys of Westminster and Salisbury churches; his restorations of St. Michael's, Cornhill; and many others. St. Paul's is, in fact, a Gothic structure, clothed in classic garb.

In comparing the quality of taste in Wren's productions with that of other masters of his period, the Professor illustrated the modesty of his character. The sublime displayed itself rather to the understanding than to the eye in his forms and combinations. Inigo Jones exhibited more pomp and passion, he was more of a painter than Wren; but he never dreamt of the structural combinations which the mathematician delighted in. Wren overstepped not the modesty of Nature, while Hawksmoor, his pupil, more striking to the eye, discarded all logic. Hogarth has ridiculed his Lion and Unicorn on the spire of St. George's, Bloomsbury, by placing it in the background of his drunken scene at St. Giles's,—as if Hawksmoor was scarcely sober when he designed it: his squinting columns in the niches of St. Mary Woolnoth, are equally indefensible.

Vanbrugh had much of the same taste, and improvised in stone such works as were admissible for theatrical scenery on canvass only. He affected force and magnitude of parts, but he stood on the dangerous limits between the sublime and the ridiculous.

He went on to compare Raffaelle and Michelangelo in the same strain, illustrating his position by the advice of Hamlet to the players; and he recommended that the student should set his mind to distinguish between real greatness and swagger, between daring and balderdash, the massive and the coarse, grace and affectation, intricacy and confusion, elegance and effeminacy. These were the essential distinctions which we should well consider in the formation of our taste.

Very few indeed were those who were enabled to carry out works, but they might design them. They might put them on paper, and thus become useful to their country. The Palace at Whitehall was estimated on the continent as one of the finest works of that day.

In the Vitruvian element "*Dispositio*," the architects of that day were conspicuous. Both Inigo Jones in Whitehall, and Wren in the examples cited, reminded us of military disposition and battle array, with all the order and discipline of warfare in the sixteenth and seventeenth centuries, which had reversed the desultory system of the previous centuries under the feudal warriors. The disposition of buildings had participated in the reform, as these arrangements had been always determined by the accidents of site, and generally by ecclesiastical requirements, and had all that picturesque (so contrary to architectural principles of Wren's day) which sketching ladies and gentlemen adored in the present.

Inigo Jones and Wren had earned for us the good opinion of Milizia, amongst other foreign writers, who had said, that architecture, banished by the license and caprice of other countries of Europe, had taken refuge in England.

He would particularly invite the attention of the younger members of the profession to that magnificent palace projected by his Royal Highness Prince Albert at Kensington-gore, which, at some time or other, he hoped they would see rising, a splendid national monument. The site was equal to the site of any of the great buildings of Europe. That palace would really be a subject of useful study to those before him, in comparing the great monuments of Europe, and so exercising their own genius as to produce something which should do honour to their country. They might, of course, have competition in which one would be successful, and others not thanked for their pains. That was one of the degradations at which their art had arrived, and which it behoved them to try and relieve it from, namely, the discreditable manner in which such efforts were received. He presumed the only way of so doing was to make their efforts really worthy of respect; and to teach, if possible, all supercilious observers and judges that there was something due to those even who were not successful. It was a great gratification to him to find that a late friend of his had left a legacy of 40*l.* a year, to be given to the unsuccessful candidate for the gold medal. The first candidate, the donor said, had his reward; but the second, who had made all possible effort, and who probably might be very near the first, had failed, had lost his time, and his means, perhaps; and now there were 40*l.* to prevent this. Finally, while we were bound to acquaint ourselves with foreign examples, to respect and to borrow from our illustrious neighbours, who were ever intent on the advancement of every noble art and science, we were not to overlook our own, or to depreciate those masters who had conferred such lustre on our country, and he recommended the remark of Pliny, that "we often make expensive journeys to visit objects, which, when under our noses, are neglected. I know not," says he, "whether it is an order of nature that we are incurious about everything we are not obliged to seek, or that the desire languishes when an object is easily obtained, or that we defer always that which we can visit any day."

From whatever cause, certain it is that our own country possesses many objects which, at a distance, in Greece or in Egypt, we should regard as miracles; and we should visit and illustrate them in the most complete manner.

"BEAUTIFUL VENICE."—At the Colchester Literary Institution, last week, Mr. Charles F. Hayward, Associate of the Institute of Architects, delivered a lecture on "Beautiful Venice." The subject was illustrated by about 100 photographs, engravings, and sketches made by the lecturer during his visit. It was enterprise, said the lecturer, by which Venice rose, and if the same were applied to Colchester, and private sacrifice were made for public good, what, he asked, might not be done for their ancient town?

THE DIPLOMA QUESTION.

AT a meeting of the Liverpool Architectural Society, held on the 9th instant, to discuss the desirability of co-operating "with the London Architectural Association in endeavouring to obtain the issue of a diploma," it was resolved by a majority of five to three,—

"That in the opinion of this meeting it is desirable that a course of architectural study should be authoritatively prescribed, and that those who pass the examination by which that study should be closed should receive a certificate; and that the president be requested to forward the foregoing declaration to the Royal Institute of British Architects, and state that the members of this society will be ready to co-operate in any measures that may be required to give it effect, leaving the details of study and examination for further consideration."

In all that has been written and said upon the diploma question, the cause which has led to the present unsuccessful position which many architects occupy seems to have been overlooked.

The cry for a diploma evidently comes from a body of young architects, who find it difficult to get employment sufficient to sustain them in respectable circumstances, without mentioning the high position which some of them should occupy.

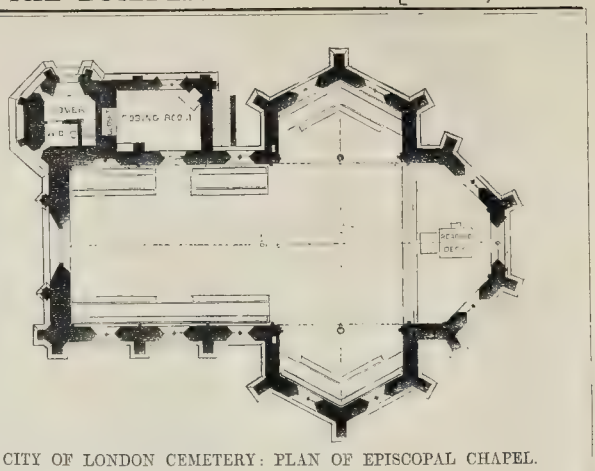
It appears to me that in consequence of the abuse of the present system of architectural pupilage, the number who have entered the profession is much greater than the demand for their services would justly warrant, and among this number are many young men, who have, no doubt, average abilities, but who are not possessed of the peculiar talent necessary for the profession. Architects are in general too ready to take young men into their offices as pupils, when perhaps the little practice they have is scarcely sufficient fully to employ even their own time. When a premium is offered it is irresistible. Whether the youth has ability or not, he can be so far trained as to be useful in copying plans; and thus the architect is enabled to work his business, with the least possible trouble to himself, and perhaps a hundred pounds in his pocket besides. The evil naturally multiplies itself; for those who possess least practice are precisely those who are most anxious to get pupils; also, in the inverse ratio to the number engaged, is the average practical experience. Diminish the number of practitioners, and I warrant the profession will rise in public estimation and general ability. There will then be scope for those who possess a knowledge of art and structural beauty, which, instead of bringing with it drudgery and penury, will gain them easy circumstances and the respect of society.

With this view of the state of the profession before our eyes, let us examine the manner in which a diploma system would work itself out. It must either be a compulsory or voluntary system. The latter is the plan proposed by the Architectural Association, and the only one which I think we need trouble ourselves to consider; for, in these days of free trade, it would be next to impossible to obtain a parliamentary enactment, which as the proposition emanates from the profession, would be considered to be demanded for the protection of architects, and not for that of the public.

I understand that the diploma sought for is to be a certificate that the person to whom it has been granted is possessed of a certain amount of knowledge, which those who grant it consider sufficient to justify him in practising as an architect.

The most sensible course of examination, and the one most likely to lead to a just conclusion, would be for those wishing to pass for a diploma to be made to prepare plans, specifications, and estimates, in the presence of competent persons appointed for that purpose. This, together with questions of a practical nature, is all that could with justice be asked for, in the present state of architectural education. A knowledge of science is possessed by but few; and, if it were demanded, it would throw out many men, who, inferior in scientific attainments to others perhaps possessed of a diploma, are yet far their superiors in architectural ability. Would it be a wise policy to demand educated mediocrity, at the expense of uneducated talent, and instead of permitting and encouraging untaught genius to develope itself, to trammel it with the compulsory demand of scientific knowledge? Most of the great inventions which have conferred undying benefits upon the world have emanated from working and uneducated men. Would you have said to George Stephenson, when planning the Liverpool and Manchester Railway, "We will not allow you to practise as an engineer: you have no knowledge of algebra, and consequently are unfitted for the post?" Such policy would be suicidal.

Let us examine what benefits would accrue to architects and the public from the introduction of a system similar to the one previously stated as being the most sensible, presuming that through public opinion it has become a moral necessity.



As it would rest with the examiners to say whether the examined possessed the requisite amount of ability to fit them for practising, and as ability varies very much in different persons, the power of drawing a line between competency and incompetency would be a very arbitrary one, and liable to be much abused. A set form of questions to be asked and answered would in a measure prevent this; but what advantage would result when design and arrangement are unconsidered? It would, however, be impossible to frame any set mode of examination which did not leave a great deal to be decided by the taste and prejudice of the examiners.

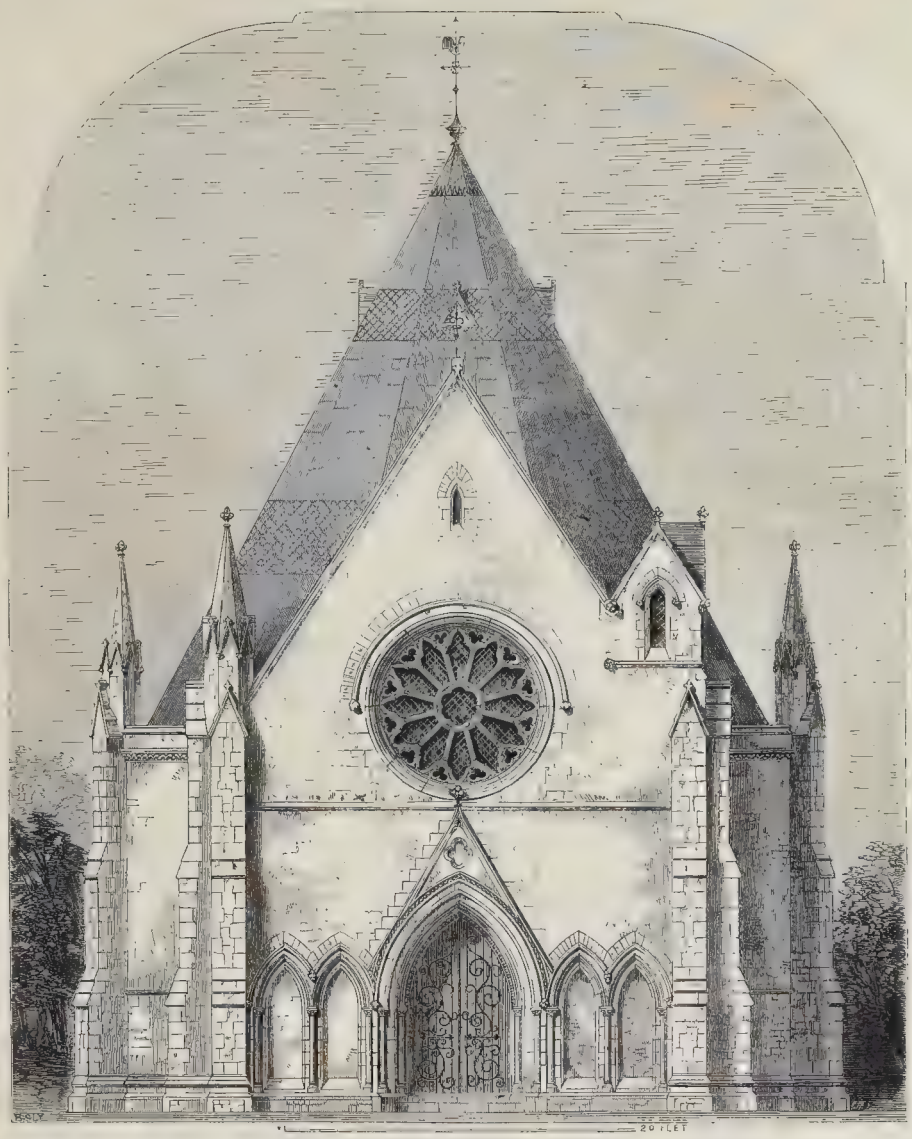
There are, I think, but few architects who would not be able to pass an examination of this description, if conducted with tolerable fairness and honesty. It would, indeed, be but a poor compliment to the talent of the profession to think differently. If there exist fools enough in the world to give work to those who do not possess even elementary knowledge, a diploma system would not prevent them from obtaining it. It might, perhaps, induce those to study who have not yet practised, in order that they might pass the examination with honour. It would, perhaps, ensure a certain amount of practical knowledge in the coming generation, but would it increase talent by offering it a more enticing remuneration? In my opinion it would not, by reason of its proving no check upon the influx of new members into the profession. Some would say, establish a system of collegiate education, and raise the qualifications to a higher standard; but there are evils inseparable to the system. You compel young men to go through a course of training which is as likely to be bad as it is to be good, and is certain to be expensive. The management may also, through interest or routine, fall into the hands of incompetent persons, and thus become a repetition, on a small scale, of Government imbecility and incapacity. It is a principle becoming day by day more significant, that every institute should stand on its own merits as a basis, and be self-sustaining. Let architectural education be no exception to the rule. Establish colleges, but let them depend upon the support of the profession. If they are required, they will answer: if not, they will soon be numbered with the things that were.

After considering the question of voluntary examination in all its bearings, the only conclusion I can come to is, that it will be impossible for it to become a moral necessity, that the feeling of the profession will be against it, from the extra trouble and expense incurred, and the dislike of many to let the decision of the great question of their lives, "whether they shall practise or not," rest with any but themselves; that the public, finding many able men among those who have no diploma, will encourage them in preference even to those possessed of one—for the English people, above all things, hold in abhorrence any attempt at monopoly, which the movement would undoubtedly be considered to portend.

I repeat that there are too many in the profession, and that it is useless to hope for amendment before the numbers are diminished. "How do you propose to effect this?" will be inquired. Architects must unite. Let them agree among themselves to take only a certain number of pupils each year; and, in preference to new hands, employ those who have already obtained a knowledge of their profession. A determination on their part such as this, steadfastly adhered to, would, I think, prove a legitimate and effectual remedy for the evils which the advocates of the diploma contemplate removing.

PHILALETHES.

CITY OF LONDON CEMETERY: PLAN OF EPISCOPAL CHAPEL.



THE CITY OF LONDON CEMETERY, AT ILFORD.

DIFFICULTIES still retard the opening of the City of London Cemetery. It will be seen one day on whom the blame rests. We add to our former illustrations (pp. 578, 579, vol. xiii.) the elevation of the Chapel for Dissenters, and the plan of the Episcopal Chapel. Hereafter we shall give a view of the Entrance and Lodge. It will be seen that the length of the episcopal chapel inside is 61 feet 6 inches, and that the width is 49 feet. The extreme length of the chapel for Dissenters is 45 feet 6 inches, and it is 34 feet across in the widest part. Two reports by Mr. William Haywood, the architect of the cemetery, have been recently printed; one "in relation to the areas to be allotted for graves and vaults at the City of London Cemetery;" the other, "in relation to Fees, Charges, and Regulations to be observed" there: the latter, in particular, contains a large amount of information as to the charges, &c. in other cemeteries. We are glad to find that Mr. Haywood, when speaking of the use of brick graves and vaults, arrives at the conclusion that "this mode of interment is fundamentally an error; and that it is most difficult, while it exists, to remedy its consequent evils." Public opinion should be loudly expressed against the maintenance of this unwholesome and unnatural practice.

Mr. Haywood's office, as engineer and surveyor to the London Commissioners of Sewers, is evidently not a sinecure, and he appears to do his duty well.

CHURCH-BUILDING NEWS.

Portsea.—The Portsea burial-ground, recently consecrated, is situated on the west side of the London, Brighton, and South Coast Railway, and about a hundred yards from the Portsea Island Union. It was purchased, according to the *Portsmouth Times*, for about 4,000*l.* and encloses about fourteen acres of ground, divided into two equal portions by a main road. The buildings consist of two mortuary chapels, a porter's lodge, dead-house, and entrance gateway, and are constructed with black-faced flints, ganetted in the joints, with Caen stone dressings. The chapels are similar in general design, of same dimensions, and have attached to each an octagonal vestry and waiting-room on either

CITY OF LONDON CEMETERY: DISSENTERS' CHAPEL.—MR. WILLIAM HAYWOOD, ARCHITECT.

side of the entrance porch. The length of each chapel is 30 feet, and the width 22 feet; and they have on each side three two-light windows with traceried heads, glazed with cathedral tinted glass, with coloured borders. The end window is a three-light, filled with ornamental stained quarries and coloured borders. The whole of the interior woodwork is of deal, stained and varnished, and picked out with blue and red. The roof is open, and covered with boarding laid crosswise, and chamfered at the joints. The chapels contain a reading-desk and two rows of open seats on each side, which have sunk panelled bench ends with *fleur-de-lis* tops. The aisle is paved with fancy sexagon (red, blue, and yellow) tiles. Over the porch, which is groined, is carried an octagon spire to the height of 60 feet to the top of the vane. In the lodge, besides accommodation for porter, is a board-room, 18 feet long, with recessed bay at the end, and an office, with strong room and closet for the registrar. The dead-house is divided by a tool-house in the centre, and is covered with Staffordshire blue tiles inlaid with red tiles. The entrance gateway consists of a carriage entrance, 12 feet wide and 20 feet high to the underside of the arch, with two side entrances, 4 feet wide and 11 feet high, with light wrought-iron gates to each, ornamented with vine-leaves. The cemetery is bounded on three sides by a panelled brick wall, and on the front by a dwarf flint wall, coped with stone, and surmounted with iron railing, bar, and cast standards between the piers. The total cost of the erection of the buildings and boundary wall is under 3,500*l*. The ground has been laid out under the directions of Mr. C. B. Smith. The draining has also been done under the same direction, to a depth of 7 feet at the lowest point. The chapels, lodge, &c. have been designed by Mr. Rake, and erected under his superintendence.

Retford.—The middle compartment of the window at the west end of the north aisle of Retford Church has just been filled in with a light of stained glass, executed by Messrs. O'Connor. The subject is from Luke, xviii. 35, and following verses, and represents our Saviour giving sight to the blind. In the middle of the picture stands the Redeemer, surrounded by other figures, and, kneeling at his feet, the blind man—his face turned upwards—the hands of the Saviour being placed over his eyes. The work has been purchased by means of small subscriptions. Contributions have been offered towards filling up some other compartments in the same window.

Birmingham.—It has been resolved to erect a monument to the late Lieutenant-Colonel Unett, of the 19th Foot, who fell at the storming of the Redan, at Sebastopol. The monument is proposed to be of marble. It will be placed in St. Philip's churchyard, Temple-street. A committee has been appointed, with power to select a design and superintend the erection.

Ilkeston.—On 23rd ult. the new Wesleyan chapel here was opened. It is a small Gothic edifice in one of the new streets, laid out on the south side of the town. The gable faces the street, the elevation presenting a quintuplet of lights, the centre one about 19 feet high, and those on either side gradually decreasing in height. Externally, the materials employed are brick, with stone dressings, &c. Internally, the roof is composed of spars, with every fifth framed by knees into a principal: it is open only as high as the collar. The plaster of the ceiling between the spars, and of the walls, is stained to a red-pink colour, which gives the chapel a comfortable and warm tone. There are sittings for nearly 200 persons. The heating is provided for by the employment of Walker's self-feeding stove. The gas fittings were supplied by Messrs. Skidmore and Son, of Coventry. The architect was Mr. F. R. H. Haswell, of Nottingham.

Ely.—The coldness of Ely Trinity Church having been much complained of, and gas stoves found ineffectual, a hot-air stove has been built in the vestry-room, fired from the outside of the church, with a flue connecting the church and furnace, by which the cold air is withdrawn from the church, and fresh hot air injected, by a compartment in one of the windows. It has been put up under the direction of Mr. William Burns, the engineer to the Local Board of Health, by Mr. John Elliott, of Ely, at the cost of 83*l.* 10s. It is said to be successful. The church is 100 feet long, and has a large glass surface.

Liverpool.—A new Independent chapel for the Rev. Mr. Dewsnap, in place of that which was burnt down in May last, is to be erected at the corner of Berkeley-street and Hill-street. The design of Messrs. Smith and Grundy, of Manchester, has been accepted. The style will be decorated Gothic, and the building will accommodate eight hundred persons.

Lillieleaf.—A monument, says the *Border Advertiser*, has just been erected in the parish church, here, as a public tribute to the memory of the late Mr. C. R. Currie. The monument is a bas-relief, executed in black and white marble, by Mr. A. H. Ritchie, of Edinburgh. It consists of a full-length figure, representing "Grief," in a kneeling posture, leaning mournfully over, and exhibiting an oval tablet, on which is the inscription.

PROVINCIAL NEWS.

Rochester.—The temporary bridge over the new canal cutting at Rochester is in a very dangerous state, and perceptibly sinking more and more every day, in consequence of the subsiding of the foundation on which the structure was laid. The side walls are cracking and splitting in all directions, and the bridge is considered so unsafe, that a new structure is being erected on the side where that part of the old one which is pulled down formerly stood. By order of the bridgewardens the new iron bridge now erecting is to be opened on 29th May next, and a large number of workmen are engaged on it to have it completed by that date. Of its three large arches, that on the Rochester side is fast approaching completion, nearly the whole of the heaviest portions of the ironwork having been fixed in their places, and the balustrades erected. After the scaffolding has been removed to admit of the traffic beneath it, the centre arch will be commenced.

Lyncombe.—The new schools at Widcombe, erected under the arches of the Great Western Railway, in a locality intersecting the most populous part of the parish of Lyncombe and Widcombe, were formally opened on Monday before last.

Worcester.—The Master of the Rolls has recently decided that the late Earl of Beauchamp's bequest of 60,000*l.* for the erection and endowment of almshouses in Worcestershire, is "void," under the statute of "Mortmain," and that the gift over to St. George's Hospital (as being contingent upon the other) is void also. Subsequently, however, the Attorney-General for the Crown has thought it his duty, as the protector of all charities, to file an "information," the effect of which is to over-ride the decision of the Master of the Rolls, and to resuscitate the cause of the almshouses, so that it will eventually have a full hearing in the House of Lords. Meantime, the Countess of Beauchamp has executed a deed binding herself to devote the whole of the portion of the 60,000*l.* to which she might be held entitled, to the erection and endowment of almshouses in Worcestershire.

Bolton.—It has been resolved by a majority of the local Poor-law Guardians, of 23 to 18, to erect a new workhouse. The number of inmates at present in Bolton workhouse is 353. The space devoted to each pauper averages scarcely more than 100 cubic feet, instead of 300, according to the requirement of the General Board. The mover of the resolution seemed to contemplate the erection of a building for 750 inmates, at 20*l.* per head, which would amount to 15,000*l.*; and that sum he proposed to borrow from Government, at ¼ per cent.

Preston.—The local guardians of the Preston Union also have resolved to erect a new workhouse; and, according to the local *Guardian*, they have already memoralized the General Board, and got their concurrence.

Kexborough (Leeds). — The opening of Kexborough Town School took place last week, according to the *Leeds Intelligencer*. Mr. Beaumont, M.P. of Bretton Hall, who owns the greater part of Kexborough, gave the site, about half an acre, and pays the cost of the erection, from 200*l.* to 300*l.* except about 50*l.* raised by the other inhabitants. The school, which is situated in Ball-lane, is a light Gothic structure.

Durham. — The erection of a new County Lunatic Asylum, at Sedgefield, will be proceeded with in the spring. To meet the expenditure, the county magistrates have appointed a committee to make a new special county rate for the purpose.

ARCHITECTURAL INSTITUTE OF SCOTLAND.

AT a meeting on the 7th of January, in George-street Hall, Edinburgh, Mr. James Brown, architect, in the chair, Mr. G. Burnett, advocate, read an interesting paper "On the Architecture of Nuremberg."

Replete as is Nuremberg with the domestic architecture of the Middle Ages, comparatively few dwelling-houses are extant older than the fifteenth century. This probably arises from the limited use of stone in private houses; but we have one noble example of a fourteenth-century dwelling in the so-called Nassau House. It has four lofty stories, undivided by string-cornices: the windows are placed with tolerable regularity: those in the upper story were originally pointed. A beautiful semi-octagonal oriel occupies the central part of one of the walls, and to each of the upper angles of the building is attached a hexagonal or octagonal turret, pierced with trifoliated apertures. The walls are crowned with an embattled parapet, and on a tablet below the merlins are carved armorial bearings. The ornament is almost exclusively confined to the turrets, parapet, and oriel, the rest of the wall being studiously plain. In point of size and pretensions this house was exceptional. The contemporary dwellings, even of the principal citizens, were homely and unambitious, and built of a framework of timber filled up with brick.

The architecture of Nuremberg was the true offspring of uncontrolled thought and feeling, which could never be contented to repeat itself.

In concluding, he said the late and still living King Lewis of Bavaria had done much to preserve the ancient buildings of Nuremberg. Regulations have been made to enforce the keeping of old houses in repair, and there has, at least, been an attempt in planning the new to readopt the old Nuremberg style. The earlier specimens of revived Nuremberg Gothic contain much that is formal and inappropriate; but recently there has been less of servile copyism, and more of the spirit of the ancient builders displayed.

PARIS.

The Statue of Francis I. in the Court of the Louvre.—Since the publication of our view of the Court of the Louvre (p. 7), wherein M. Clésinger's equestrian statue of Francis I. drawn from the original, was shown, the model of the statue has been erected, and has elicited some strong objections from the French critics. The statue is now made to face the opposite way to that shown in our print, and the massive pedestal serves not merely to lessen the apparent size of the building it is intended to adorn, but blocks up vistas on all sides. The horse, too, is of the drayhorse tribe, and its energetic action and bustle, and exaggerated anatomy, contrast unpleasantly with the quiet aspect, if not tameness, of the figure of the king. The statue, nevertheless, has many fine points; but the situation is undeniably unfortunate.

The Hemicycle at the Ecole des Beaux Arts.—Twenty figures alone remain uninjured in M. Delaroche's fine work, out of the 75 which compose it. The restoration has been entrusted to M. Mercier, and is already commenced. M. Delaroche will himself have to paint again thirty of the figures. M. Robert Fleury is the president of the School of the Fine Arts for the year, and M. Jay, Professor of Construction, is the vice-president: the latter gentleman has also been named president of the Section of Architecture for the same period.

Aids to Literature.—The Préfet of the Seine has been authorised to purchase, on account of the city, 144 copies of the second edition of MM. Lazare's Dictionary of the Streets and Monuments of Paris, in consideration of its usefulness, and for which purpose the sum of 2,592 francs has been voted!

M. David (d'Anger), the celebrated sculptor, died recently in Paris, at the age of 65, and was buried at Père la Chaise. He was no relation to the famous painter of his name, although he was very generally supposed to be one.

M. Horace Vernet has promised to paint gratuitously in fresco the walls of a new church now in course of construction at Bagnères-de-Bigorre (Hautes Pyrénées).

HOW TO IMPROVE OUR ARCHITECTURE.

IT seems much the fashion of the present day for architects to complain of the little patronage and attention bestowed on architecture, and to agitate to bring about some change that may place them and their art in a better position; but the reasons they assign for this unfortunate state of things, such as the use of stucco, &c. seem anything but satisfactory.

Now I take it that architecture is in no worse a condition than any other unmarketable article or science, and that its being at a discount must be attributed to its not being offered to the public in a form calculated to identify itself with its interests.

Now, sir, let it be more the custom for men of capital to build on their own freeholds instead of letting their ground on short building leases to parties of respectability, with tempting offers of assistance; and let them, like the Parisian builders, obviate the necessity of insurance and frequent repairs, by a fire-proof and more careful construction; let, in short, the speculators be those who have the means to speculate, and the circumstances under which buildings are erected like those of almost any other country; let there be an efficient school, in which students of architecture may learn their art and its application without prejudice to common sense, and I feel assured that the demands of the public would be more successfully answered, and competent architects have less cause to complain of want of patronage.

H. H. B.

LECTURES AT THE ARCHITECTURAL EXHIBITION.—On the 15th inst. Mr. George Scharf delivered an able lecture "On Early Christian Art, as illustrated in Mosaic Paintings," which was well received by a large audience.

BRIGHTON WORKHOUSE COMPETITION.

WITH reference to a paragraph on this subject in the last number of our last volume, p. 637, Mr. Collins has written to deny the statement quoted from the local *Herald*. The writer says:—I was *unfortunately* the successful competitor for the "Brighton Industrial Schools." The design (together with the late Mr. Carpenter's for the "workhouse") was not considered by the Poor-law Board to contain sufficient accommodation with regard to superficial area, and was required to be enlarged by more than one-third. By direction of the guardians new designs were made, founded on the requirements of the Poor-law Board, and many alterations of an expensive character were introduced. By the dissensions distracting the Board, the time frittered away by jobbery, &c. the unwarrantable interference of their surveyor, the natural consequence ensued—the buildings could not be carried out for anything like the sum contemplated, and they were abandoned (both workhouse and schools), and I then submitted the surveyor's and my account.

All the accounts were disputed, — not on the ground that they were not indebted, nor that the charges were exorbitant, but that legal technicalities protected them from paying. They took the opinion of the four judges in "a special case" on behalf of the surveyor's claim, who were unanimously against them: by this decision they had to pay the full demand, viz. 204*l.*; the taxed costs, 56*l.*; the lithographer's account of over 50*l.* and his costs.

My charge for the preparation of the working drawings (for a building to accommodate 300) was 309*l.* *All* the requisite drawings, specifications, &c. had been prepared (and are now in my possession), over twenty visits made to Brighton, and many incidental expenses incurred. To my professional brethren (used to the manœuvres of public boards) these facts will be sufficient, but it may be as well to mention that the bill has been submitted to many gentlemen high in the profession, who all expressed an opinion that it was undercharged instead of the reverse: the names of Prof. Donaldson, Messrs. Stephens, Hammon, &c. will be guarantee for this statement. That the guardians did not dispute this claim for the reason stated I have the authority of their own solicitor, for, said he, "If the guardians were entitled to pay you anything, it should have been the whole amount." But the best refutation can be seen by their own pleadings,—that I had no right of action; and very little doubt exists on my mind that these respectable guardians intended to again avail themselves of a technicality (of which the law of England is unhappily too full), to deprive me of my rights, the effect of which would have been to have mulcted me in the payment of some hundreds for costs. On the other hand, confiding in the sound legal knowledge of my counsel, Sergeant Byles and Mr. Lush, I left the whole conduct of the case in their hands, and being out of court with my solicitor when the cause was called on, was as much *really surprised* on my return at the offer made by the guardians, and accepted by my counsel, as they (the guardians) *pretended to be*: the consequence of this arrangement to these honourable guardians (and, unfortunately, to the parish also), has been, that they have had to pay 50*l.* the verdict, and 127*l.* 17*s.* 6*d.* taxed costs to my attorney. Add about 200*l.* to their own attorney, and the adage is fulfilled in this as in most instances, that "Honesty is the best policy."

H. H. COLLINS.

ROYAL INSTITUTE OF THE ARCHITECTS OF IRELAND.

WESTMINSTER-HALL ROOF.

AT a meeting of this Institute, on the 12th inst. Mr. T. Symes in the chair, after some discussion relative to a communication received from the Architectural Association of London, inviting the opinions of this Institute on the *diploma question*, and which was ultimately referred to the council, for final decision, a description of Dr. Gray's flushing apparatus was delivered by the inventor in person, and the members expressed their approval of its efficacy and simplicity. The invention has been extensively adopted in some of the public and private buildings in Dublin and elsewhere, with considerable success; and the fact of the apparatus being self-acting enhances its merits. Mr. M'Curdy brought under the notice of the Institute a copy of a record in St. Michan's Church, and verified by "Hauner's Chronicle," in the Library of Trinity College, Dublin, which states that the roof over Westminster-hall was constructed with timber procured from the site of this church; and he further said that clumps of trees were found during recent excavations. The following is a copy:—

"Stainhurst findeth that, anno 1095, there came certaine Easterlings to the north side of Dublin, adjoining to the Liffie, and seated themselves there, so that of them to this day the place is called Ostomontowne, and corruptly, Oxmonton, and the parish Saint Michans, of one Michanus, a Dane and a bisbop, which founded the church, unto whom Murchard or Morogh, King of Leynster, gave that parcell of land to that use. The faire greene or commune, now called Ostomontowne-greene, was all wood, and hee that diggeth at this day to any depth shall finde the grounde full of great rootes. From thence, anno 1098, King William Rufus, by license of Murchard, had that frame which made up the roofes of Westminster Hall, where no English spider *webbeth or breedeth to this day*."

THE NEW BUILDING ACT.

THE following question appears important in the construction of the 18th section of the New Building Act, which provides that "the area of such recesses and openings" (in external walls) "shall not, taken together, exceed one half of the whole area of the wall in which they are made."* Does this apply to shop-fronts? My impression, on first reading it, was that, if there were no brickwork in the shop-front, the area of the wall should be taken from the commencement of the wall over the same. It will readily be seen that, if this view be not correct, the shop-front, as ordinarily built, will, in low front walls, monopolise nearly all the space allowed for openings, especially where there is no basement story.

My doubt is whether the first part of the first schedule will not militate against this view. "Every building shall be enclosed with walls constructed of brick, stone, or other hard and incombustible substances, *and the foundations shall rest on the solid ground, or upon concrete, or upon other solid substructure*." I suppose a bressummer, supported by columns, would be hardly a "solid substructure," and the courses immediately over the bressummer could hardly be called "foundations." I do not see the word "foundations" used elsewhere in the Act. The discussion of this question may be the means of setting it at rest. As it is, I fear we have all the disadvantages of a window-tax without its benefit to the state.†

Again, in the case of a gateway under a house leading (for instance) to a builder's yard, would the opening for said gateway be taken as part of the wall, and form one of the openings whose area is to be so calculated, or would the area of the wall be taken without such opening?‡

SURVEYOR.

WORKS PRODUCED IN THE SCHOOLS OF ART, GORE HOUSE.

THE Autumn exhibition of the students' works, both metropolitan and provincial, has been open during the past fortnight. Some of the works show creditable proficiency so far as they go, but are not sufficiently attractive to allure many visitors to the Kensington-road. A student writes to us, objecting to the "repetition and monotony of the works exhibited." He continues:—"This practice of covering the walls of Gore House with numerous drawings of the same subject may afford an admirable opportunity for the comparison of various styles, and the merit of the works of different schools, to the masters whose pupils are competing for the medals; but to the public it is a source of disgust. What possible object can the Department of Science and Art have in view by this proceeding, the sameness and monotony of which renders the exhibition most wearisome?"

BRITISH RAILWAYS.

INSTITUTION OF CIVIL ENGINEERS.

AT the meeting on January 8th, an address by Mr. Robert Stephenson, M.P. on taking the chair for the first time since his election, was read. It had especial reference to the great question of British railways, which were described as spreading, like a network, over Great Britain and Ireland, to the extent of 8,054 miles completed: thus, in length, they exceeded the ten chief rivers of Europe united, and more than enough of single rails were laid to make a belt of iron around the globe.

The cost of these lines had been 286,000,000*l.*—equal to one-third of the amount of the national debt. Already, in two short years, there had been spent more than one-fourth of 286 millions in the war in which England was engaged; yet how small were the material advantages obtained by the war, in comparison with the results secured by railways.

The extent of the railway works was remarkable: they had penetrated the earth with tunnels to the extent of more than fifty miles. There were eleven miles of viaduct in the vicinity of the metropolis alone. The earth-works measured 550,000,000 of cubic yards: St. Paul's, in comparison with the mountain this earth would rear, would be but as a pigmy beside a giant, for it would form a pyramid a mile and a half in height, with a base larger than St. James's-park.

Eighty millions of train miles were run annually on the railways, 5,000 engines, and 150,000 vehicles composed the working stock. The engines, in a straight line, would extend from London to Chatham; the vehicles from London to Aberdeen; and the companies employed 90,400 officers and servants; whilst the engines consumed annually 2,000,000 tons of coals, so that in every minute of time four tons of coal flashed into steam twenty tons of water, an amount sufficient for the supply of the domestic and other wants of the town of Liverpool.

In 1854, 111 millions of passengers were conveyed on railways; each passenger travelling an average of twelve miles.

The receipts of the railways in 1854 amounted to 20,215,000*l.* and there was no instance on record, in which the receipts of a railway had not been of continuous growth, even where portions of its traffic had been abstracted by competition, or new lines.

The wear and tear was great: 20,000 tons of iron required to be replaced annually; and twenty-six millions of sleepers annually perished: 300,000 trees were annually felled to make good the loss of sleepers; and 300,000 trees could be grown on little less than 5,000 acres of forest land.

Nothing was so profitable as passenger traffic, as it cost less, in every way, than goods, and an average train would carry 200 passengers. The cost of running a train was overstated at 15*d.* per mile, and 200 passengers at five-eighths of a penny per mile produced 5*s.* 2½*d.* But this argument did not imply that, in all cases, fares should be fixed at a minimum.

The postal facilities afforded by railways were very great. But for their existence, Mr. Rowland Hill's plan never could have been effectually carried out. Railways afforded the means of carrying bulk which would have been fatal to the old mail coaches. Every Friday night, at present, when the weekly papers were transmitted, eight or ten vans were now required for post-office bags on the North-Western Railway, and this use of eight or ten railway vans implied, at the least, the employment of fourteen or fifteen mail coaches; and the expenses of fourteen or fifteen mail coaches, to Birmingham, could never have been sustained by a penny postage. For this great blessing, therefore, the nation had to thank the railways.

Parliamentary legislation for railways was full of incongruities and absurdities, which were graphically described and illustrated. The Acts of Parliament which railways had been forced to obtain had cost the public fourteen millions sterling. But this was shown to be the exclusive fault of Parliament itself, and of the system it enforced. The legislation of Parliament had made railways pay seventy millions of money to landowners for land and property; yet almost every estate, traversed by a railway, had been greatly improved in value. Parliament had taxed the companies in favour of the landowners, for what was called "severance." Claims for compensation for "severance" were based on theories which were wholly ideal and imaginary. No one had ever been able to show a practical loss by "severance," and the claim was often made as "customary," where it was even admitted that no ground for it existed. The remedy which suggested itself, for this state of things, was one which Parliament was not likely to grant. A competent tribunal was wanted; and Parliament was incompetent.

Railway management was next considered, and shown to be completely anomalous. Parliament had legislated for railways as toll-taking companies; but every direction was obliged to embark in enterprises foreign to the parliamentary objects of the railway itself. This produced serious dilemmas.

The Electric Telegraph—that offspring and indispensable companion of railways—was next considered. 7,200 miles of telegraph, or 36,000 miles of wires, were laid down at least. 3,000 people were continually employed, and more than a million of public messages were annually flashed along this "silent highway." To the working of railways the telegraph had become essential.

The results of railways were astounding: 90,000 men were employed directly, and upwards of 40,000 collaterally: 130,000 men, with their wives and families represented a population of 500,000 souls; so that one in fifty of the entire population of the kingdom might be said to be dependent upon railways! The annual receipt of railways now reached twenty millions; or nearly half the amount of the ordinary revenue of the State. The moral results of railways were equally remarkable: railways were equalizing the value of land throughout the kingdom, by bringing distant properties practically nearer to the centre of consumption, and by facilitating the

* We have already alluded to the restrictive effect of this clause.
† The Act distinctly recognizes an opening the whole width of the front covered by a bressummer (Sec. XV.).
‡ Clearly, without such opening.

transit of manures; thus enabling poor lands to compete with superior soils. The stimulus afforded to national industry was exemplified by the progress of the boiler-plate manufacture; and the increased comforts afforded to the people were illustrated by the extraordinary progress of the fish trade, and the development of the inland coal traffic.

The address concluded with some words of practical application. The duty devolved on civil engineers of improving and perfecting this vast system. Every farthing saved on the train mileage of the kingdom was 80,000*l.* a-year gained to railway companies. There was therefore ample field for economical appliances, and therefore no economical arrangement, however trifling, was to be neglected.

RAILWAYS AND TRAFFIC RETURNS.

THE total receipts on railways in the United Kingdom for last year, appear from the usual returns to have been 21,123,315*l.* on 8,240 miles of railway, being at the rate of 2,567*l.* per mile. The cost on construction, working stock, and so forth, amounted to 291,903,000*l.* being at the rate of 35,425*l.* per mile. The total receipts on railways in 1854 amounted to 20,000,525*l.* on 8,023 miles of railway, showing an increase of 1,122,790*l.* or 5·61 per cent. in the receipts, and 2·64 per cent. in the mileage. The increase of traffic in 1854 over 1853 was 2,080,000*l.* or about 11 per cent. "Nothing," remarks the *Times*, "can be more satisfactory than the increase of traffic on railways, and were it not for the unwarrantable increase of expenditure on capital account, the railways, on the whole, would now be paying about 6 per cent. per annum, instead of about 3½ per cent. as at present; which is in fact an increase upon the average of former years of at least half per cent."——The traffic returns of railways in the United Kingdom for the week ending January 5, amounted to 350,740*l.* and for the corresponding week of 1855 to 328,560*l.*; showing an increase of 22,180*l.* The gross receipts of the eight railways having their termini in the metropolis amounted for the week ending as above to 153,655*l.* and for the corresponding week of last year to 142,318*l.*; showing an increase of 11,337*l.*——It appears from the official returns to Parliament, made up to the end of 1853, of the "law and parliamentary" expenses incurred by railway companies (*vide* "Nash's Railway Management"), that the London and North-Western Company has expended 1,051,436*l.* in that profitable luxury—law, independent of the sums paid by other companies, with which it is allied or affiliated. The Chester and Holyhead Company expended 56,971*l.*; the Caledonian Company, 320,880*l.*; the Midland Company, 1,031,657*l.*; the Lancashire and Yorkshire Company, 721,452*l.*; the East Lancashire Company, 158,717*l.*; the Birkenhead and Cheshire Junction Company, 127,919*l.*; the Manchester, Sheffield, and Lincoln Company, 632,458*l.*; the South-Eastern Company, 727,125*l.*; the Great-Western Company (besides its allies), 752,837*l.*; all expended in litigation and wars productive of no adequate benefit to the shareholders.

THE IRON INDUSTRY OF THIS AND OTHER COUNTRIES.

AT the Society of Arts, on the 9th instant, the paper read was on "The Present Position of the Iron Industry of Great Britain with reference to that of other Countries," the second and concluding part, by Mr. J. K. Blackwell, F.G.S.

The author first entered into a minute examination of the chemical principles involved in the manufacture, pointing out several things which appeared capable of improvement, and throwing out some suggestions for inquiry. He then criticised the specimens of the manufacture exhibited at the Paris Exhibition, and thus concluded:—

Great Britain does not possess the valuable resources of vegetable fuel, the use of which in some processes of the iron manufacture produces such valuable results in the quality of the metal so treated; and, when its partial employment can be combined with that of mineral fuel, in those other processes in which the latter can be most advantageously applied, enables the best quality of this metal to be obtained coincidently with cheap production; but Great Britain possesses almost inexhaustible supplies of mineral fuel and of iron ore (for the most part of good quality) in immediate contiguity to each other, and these advantages are less generally possessed by other countries engaged in this industry. Perhaps the very abundance of the mineral resources which support the iron industry of Great Britain has contributed to produce somewhat extensively a slovenly system of manufacture. It is, at least, certain that in this country an inferior quality of iron, badly smelted, wastefully converted, and carelessly manufactured, is often produced, when a superior quality might be obtained at no higher cost. It appears desirable, therefore, in reference to our future success in this department of industry, to recognise clearly that we have no exclusive monopoly of the means of production, that the progress of material civilisation is facilitating the means of transport and removing the natural difficulties interposed to this manufacture in other countries, while their industrial energies are receiving constantly rapid development. It is highly important that we should prepare ourselves by every means for the industrial rivalry that awaits us; and the question arises whether in this country we can neglect any available means for this purpose? There can be no doubt that the industrial energies of foreign countries are directed generally by very accurate scientific knowledge, and in no department in a higher degree than in the manufacture of iron. It can only be by the diffusion of this scientific knowledge more completely than has hitherto been the case among our industrial population, and by its combination with the energy and practical knowledge which have hitherto directed them, that we can expect to maintain our present position as the chief manufacturing country in the world.

A discussion took place when the paper had been read, in which Mr. Bird, Mr. Kennard, Mr. Anderson, of Woolwich Arsenal, Colonel Wilmot, R.A. and others took part. Mr. Bird warmly combatted the correctness of the view which Mr. Blakewell had taken of the manner in which the British iron trade was represented at Paris, and insisted that the enormous development which that branch of industry had assumed in the United Kingdom of late years, as compared with any other country, was a practical and decisive refutation of his views as to its unsatisfactory position. Mr. Anderson lamented the effect which the straining after cheapness had upon the quality of the iron produced, and Mr. Kennard did not see how the ironmasters could take a different view of their position than they took at present. The lateness of the hour precluded the discussion being carried further, and the proceedings terminated with a vote of thanks to Mr. Blackwell for his able paper.

LECTURES ON ORNAMENTAL ART AT LEEDS.

MR. SWALLOW, the master of the Leeds School of Art, gave, on Monday and Wednesday before last, lectures on ancient ornamental art as practised by the Egyptians, Greeks, and Romans, illustrated by diagrams. In his introduction he remarked, that to a manufacturing nation like England, a knowledge of ornamental art must be a subject of vital importance. It had for its object the improvement and adornment of manufactures; and as a superior and improved article will always be preferred, a knowledge of ornamental art must tend to extend and increase the demand. This knowledge, therefore, becomes a question for the consideration of all classes. Ornamental art could not be confined to a class. It operated with the patron or purchaser, with the producer or manufacturer, and with the workman. The first inquires, according to his knowledge, for the most beautiful thing for his money. The second finds that he meets with a readier sale, and can obtain a higher value for extra beauty. The architect, as a producer, finds ornamental beauty a great addition and recommendation in his profession. In fact, whatever may be the thing produced or manufactured, ornamental art adds greatly to its value. The workman, too, could obtain higher wages and better employment by his knowledge of the ornamental. The claim of nations to high civilization is based upon their knowledge of, and progress in, ornamental art. We must judge of them by their buildings, their decorations, and the improvement and beauty of their manufactures. Mr. Swallow, in his third lecture, said the Saracens did not build mosques, but they left several palaces, and one in particular at Palermo, which takes its name from the last word of an inscription, *à la ziza*, and was called by the Italians, *La Ziza*, or the Zig-zag. And there we get, he said, the origin of the word "zig-zag;" and the importation of the peculiar zig-zag form is a characteristic of Norman in this country and in France.

PADDY ON "VINTILASHIN."—An Irish navvy, "neat as imported," the other day, was hastily set to work in drainage excavation at Edinburgh, and a few hours thereafter he was caught in the act of playing sad havoc with the gas-pipes, into the smashed end of one of which an overseer found him peeping. He was rated soundly, of course, for his reckless conduct. "Arrah, my jewel!" said Pat, who was rather hard of hearing,—"what's the matter wid ye? Is it them poipes yer consarn'd about? Be aisy, mister: it'd be well to vintilit mores of 'im, for feint a thing's in them ould black chaps but stink!"

THE BARRACKS COMPETITION.

A HEAP of letters now before us shows the interest with which parties are watching the result of this competition. We received, more than a week ago, the names of gentlemen *supposed* to be the successful candidates. In truth, however, as we have authority to state, the decision has not even yet been come to.

ARCHITECTURAL PUBLICATION SOCIETY.

ILLUSTRATIONS TO DICTIONARY.

PART II. OF VOL. 1854-5.

THIS Part contains illustrations of Bell Towers, the elegant Barrière du Trône, Paris, Belvederes, Bed-room, Agricultural Buildings, Bent Timber Roofs, Bell Gables, Arabesques, the Basilica at Vicenza, &c. contributed by Messrs. E. H. Martineau, Garling, O. Hansard, G. R. Burnell, Mocatta, S. Smirke, T. J. Willson, T. H. Lewis, H. Jones, Walton, G. R. Clarke, &c.

The committee say that the quantity of matter to be delivered annually to the subscribers will be increased in proportion to the extension of the society; and they urge members, therefore, to obtain as many new subscribers as possible. So do we. There ought to be many more than there are.

Notices of Books.

VARIORUM.

THE November part of Harper's "New Monthly Magazine" (New York), contains a paper, by Mr. Calvert Vaux, "Hints for Country House Builders," illustrated by no fewer than twenty-three views of designs, and as many plans, very creditable to the author, and likely to be of much use in the country of his adoption. Some of our London readers will remember Mr. Vaux, especially in connection with the Vanbrugh Club.*——The second volume of the new edition of "Lardner's Handbook of Natural Philosophy" has been issued by Walton and Maberly, of Paternoster-row. The subjects are Hydrostatics, Pneumatics, and Heat, and the volume contains many new and instructive illustrations. A notice of the issue of such a volume is all that is needed for its recommendation.——A second edition of Galloway's "First Step in Chemistry; or, New Method for Teaching the Elements of the Science," has just been published by Churchill, of New Burlington-street. The present edition is rewritten and enlarged.——The fifteenth yearly issue of the "Post Magazine Almanac and Insurance Directory" has been issued for 1856, by Pateman, of Wine-office-court, Fleet-street. Besides the other features of a general almanac, with the ages of peers, &c. it contains a list of projected assurance offices, and of office changes, along with its full insurance directory, and numerous advertisements of the different insurance companies, in town and country, all for sixpence.——As useful to advertisers as that just mentioned is to intending assurers, is "The Newspaper Press Directory and Advertiser's Guide," fifth edition, corrected for 1856, Mitchell, Red Lion-court, Fleet-street. It also contains a good deal of information of use to literary men, and others, such as names of proprietors, publishers, and editors of papers, and their tenets or political and literary principles.——"The Micrographic Dictionary," published by Van Voorst, of Paternoster-row, is now completed, and will form a very interesting and valuable volume.——"The Practical Stenographer," by E. Soper, Darton and Co. 58, Holborn-hill, is a practical treatise by a practical short-hand writer of many years' experience. Stenography, in these "fast" times, might become an art of very general utility. The author's object is to help to bring his important art into more general use among all classes, by rendering it sufficiently simple, intelligible, and comprehensive, to interest the young and the public generally; and to this end

* Messrs. Vaux and Withers we see put up upon their business card the terms on which they transact business in the States viz.:—

"2½ per cent. for plans and specifications.
1 " detail drawings.
1½ " superintendence.
5 " usual commission of architects."

he has adapted it, as far as possible, to use in schools and for self-instruction. He calls it an entirely new system, but every practical stenographer has a system, to some extent, peculiar to himself, and this we suspect will constitute one of the greatest hindrances to the universal use of stenography. Indeed, until the venerable scratches are entirely and radically remodelled, and made to combine beauty with utility, we greatly suspect it will continue to be more or less limited and confined to the use of reporters and for secret notes and correspondence. Could not some practical stenographer endeavour, for instance, so to anatomize and simplify the ordinary characters in penmanship, as to form a "current hand" of sufficient rapidity, and which would combine elegance of form with facility and utility in stenographic practice? We do not speak at haphazard: many years since we became convinced, by an occasional study of the subject, that this was quite possible. The purpose was combined with a due consideration of the correlationships of sound in accordance with equivalent correlations in form.——"The Newspaper and General Readers' Pocket Companion," by the author of "Live and Learn" (Shaw, publisher) is a little shilling compendium of the classical and foreign words with which our good old Saxon is becoming more and more interlarded, often without much improvement as well as without much necessity. As an instructor, for the use or adoption of such phrases or words, we are by no means inclined to recommend any book; but as an index and exponent, by reference to which a reader not familiar with them may make out their meaning, the little pamphlet just named may be useful, although its explanation or translation is not always strictly correct. Thus:—"His *prestige* is gone: that is to say, His *importance*, &c.;" or again—"The *programme* of the Birmingham Festival is issued: that is to say, the *concert-bill*, &c." Although the English language is doubtless very much indebted to its eclectic and heterogeneous origin for its force and significance, it is very much to be regretted, we think, that there should be such an itching amongst popular writers and speakers to haul in foreign words and phrases, merely for the smart look of the thing.——The last number of Longman's "Travellers' Library,"—"Brazil viewed through a Naval Glass," by Edward Wilberforce, leads us to say, what we have had once or twice in our mind before in respect of this series, namely, that the works selected are not always those we should think best adapted for the object. The tone of "Brazil" is not pleasant, and the amount of information contained very, very small.

Miscellanea.

FALL OF LISMORE BRIDGE, IRELAND.—On Wednesday, in week before last, this structure, recently erected at a cost of 2,000*l.* suddenly gave way, the five new arches having simultaneously fallen. Late rains are blamed: no water was running under the arches demolished. The contractor, Mr. Williams, it appears, had already received the usual certificate from the county surveyor as to the bridge being fit for traffic, and also four-fifths of the 2,000*l.*; but the contractor, it is said, was to keep the bridge in order for twelve months.

ORGANS.—In the interesting article on the organ in your number for January 5th (p. 3), there is, I think, a slight mistake regarding the position of the organ in Canterbury Cathedral. When I was there last (a year or two ago), it was *not* over the screens, but altogether out of sight in the triforium over the south aisle of the choir, and the organist played it, sitting among the choir. Not having heard of its removal, I suppose it to be still in the same position.* I may add, that this organ was originally built for the Handel commemoration, held in Westminster Abbey, in 1791, and was afterwards purchased for the cathedral at Canterbury. It is stated by Mr. Hopkins, that the organ in Westminster Abbey contains a 32-feet pipe (CCCC). I believe this is not the case. The organ at Exeter-hall, and the one at the Panopticon, in Leicester-square, are the only London organs embracing so large a compass. The organs in St. George's-hall, Liverpool, the Town-hall, Birmingham, York Minster, and Winchester Cathedral, are the others in England containing 32-feet pipes.

W. MARSHALL.

* We have no doubt our correspondent is correct: the organ was not at fault.

PERIL OF THE WALLASEY EMBANKMENT, LIVERPOOL.—At a recent meeting of the town council, Mr. Samuel Holme called attention to the great damage which the Wallasey embankment had of late sustained from severe gales, accompanied by high tides. The damage resulting from this cause last quarter it would take upwards of 8,000*l.* to repair. Under the circumstances, and considering the rapid decay of the foreshore from incursions of the sea, he urged that the dock committee should unite with the corporation in the erection of a sea wall, beginning at Seacombe, and ending at Hoylake, a distance of about eight miles, which would cost about 400,000*l.* or 500,000*l.* Mr. Holme was at same meeting elected as a commissioner of the Wallasey embankment, together with the Mayor and another gentleman.

DESTRUCTION OF AN OFFICER'S HUT AT BELFAST BY FIRE.—The *Belfast Newsletter* states that a fire broke out last week in a wooden hut at the barracks, in consequence, as was believed, of the stove having set some articles of clothing on fire. The huts are on the north side of the barrack square. Fortunately the fire was confined to the one hut, which, however, was entirely destroyed, with all its contents, officer's money, &c.

METROPLITAN BOARD OF WORKS. — A meeting of this Board was held on Monday last, when it was resolved, that the salary of the engineer to the Board, should be 1,000*l.* a-year, including travelling and incidental expenses; and that of the accountant, 450*l.* with the same conditions. The salary of the superintendant of works was not decided on. The chairman stated, that he had received thirty-four applications for the office of Clerk to the Board. It was resolved that no member of the Board would be eligible, and the election was postponed.

THE METROPOLITAN SEWAGE QUESTION.—Mr. J. G. Samouelle revives the suggestion of running the main sewer along the centre of the bed of the Thames, but with this modification, that the sewer be made of half-circular iron pipes, flat side uppermost, sunk so as to be level with the bed of the river.

METROPOLITAN MANAGEMENT.—As a vestryman of Lee, and a subscriber to the *Builder* from its first number, allow me to say I am happy to find so many builders members of the several boards and vestries; and presuming all good builders to be readers of your journal, I trust by their knowledge, and your assistance, they may secure good service to their constituents, and arouse in their fellow-vestrymen a desire to become acquainted with the duties of the office which they are elected to fulfil. I would enlist the co-operation of such builders as belong to the different boards, or vestries, to send to your office a notice of such proceedings as may interest the general inhabitants. Pray, stir up in the vestries a desire for a thorough sanitary reform, not only in name, but in deed.—S.

ERECTION OF A WORKING MEN'S READING-ROOM AT BRIGHTON.—Some time since it was determined to erect a building in the All Souls' Church district for a working men's reading-room, and the Countess de Noailles purchased a site in Essex-street, Lavender-street. On this site a building has now been erected, embracing a library capable of accommodating between 500 and 600 persons. The main purpose of the building is the accommodation of the working men; but portions of it, according to the *Brighton Herald*, will also be devoted to a Ragged School, Sunday Schools, and Adult Evening Schools. The building was formally opened on Tuesday before last.

THE IRON TRADE. - The result of the quarterly meetings is, that no attempt has been made to raise prices. The state of the trade is declared to be good, and there seems to be a growing inclination to "let well alone." Lord Ward is said to have issued a circular, in which he fixes the price of his best cold blast pigs at 5*l.* 12s. 6d.; and his hot, at 4*l.* 15s. It is expected that other makers will follow his example. The demand for bar iron and nail rods has greatly increased since the meetings. An iron master, says the Birmingham correspondent of the *Times*, states that he has known times when prices were much lower and profits much greater. The price of pigs, however, is considered to be in the way of any reduction.

IMPROVED DWELLINGS FOR THE LABOURING-CLASSES.—At Norwich Guildhall, on Friday in last week, a meeting was held for the purpose of forming a company, under the limited liability Act, for providing improved dwellings for the labouring-classes. It is proposed to raise a capital of 1,200*l.* in shares of 10*l.* each, to be applied in building sixteen dwellings upon land which has been taken in Silver-street, Pockthorpe, and for which plans have been prepared. It is estimated that the rentals of the cottages will (after a deduction of 25 per cent. for outgoings) produce about 6 per cent. on the outlay; but it is intended to limit the profits to be taken to 4 per cent. and the surplus to be applied in such manner as may hereafter be determined on.

SURVEYORSHIPS.—Mr. E. N. Clifton has been appointed surveyor to the Globe Fire Office: and Mr. Digby Wyatt, we are told, has been elected architect to the East-India Company. Both these appointments became vacant by the death of the late Mr. Arthur Green.

THE PHOTOGRAPHIC SOCIETY.—The Exhibition of the Photographic Society, now open at the Gallery of Painters in Water Colours, Pall-mall East, contains a number of very interesting works. The composition of pictures, by grouping individuals, properly costumed, is more general than it was.

CHURCH FLUES: SINGULAR SCENE AT AMBLESIDE.—The new church at Ambleside has recently been warmed, by means of flues leading from a coke fire. Owing to some imperfection in the flues, the deleterious carbonic acid gas issued from them into the body of the church during the morning service on Sunday before last. Young children, who breathed nearest the floor, were first affected, and about twenty of them followed one another out before adults took the alarm. At about the middle of the sermon the congregation rose in a body and went out, to the apparent astonishment of the preacher, who, in his elevated pulpit, was unconscious of the mischief. He was left entirely alone in the church; and if the congregation had remained a quarter of an hour longer, no one would have been able to help himself or his neighbour, and many, or all, must have perished. The scene in the churchyard was singular and alarming: numbers of persons were laid on the grass, fainting and convulsed: none altogether escaped injury: many dropped as if dead on their way home, and a terrible commotion must have been excited in the little village. Fortunately, none of the cases have terminated fatally.

THE BATH FINE-ART EXHIBITION.—The Bath Society for the Promotion of the Fine Arts, held its first meeting this season on Tuesday in last week, at the Assembly-rooms. The octagon and card rooms were those occupied. There were numerous works of art exhibited, including various known works by Turner, Etty, Roberts, Sant, Herring, and other masters. The display, according to the local *Chronicle*, rivalled that of any of the preceding exhibitions of the society. Complaints of want of room and crowded meetings promise well for the established popularity of these exhibitions.

HORSEMONGER-LANE GAOL.—We have received some letters impugning the fairness of the Surrey magistrate's decision in this matter, but do not find evidence of this in the papers before us. The magistrates had an absolute tender before them from Messrs. Lucas to carry out the selected design for the sum they had named—10,000*l.* As respects the non-inclusion in this amount of the architect's commission, it does not seem to have formed part of the original stipulation.

EXHIBITION OF WORKS OF ART AND INDUSTRY AT STRETFORD. — On Friday in last week, an exhibition of works of art and practical industry was opened in the Public-hall, Stretford, under the patronage of the Bishop of Manchester. The exhibition originated with a committee for raising funds for the support of infant and adult schools established in the townships of Flixton and Urmston, near Stretford. The contributions were numerous. The space occupied consists of the large hall and three or four smaller rooms. The exhibition, according to the *Manchester Courier*, will remain open for three or four weeks, provided it be well supported. On each day this week there were to be the additional attractions of dissolving views, musical performances, lectures, &c.

THE SURREY GARDENS COMPANY AND MUSIC HALL.—A prospectus has been issued of a company under the Limited Liability Act, with a capital of 40,000*l.* in 10*l.* shares, to be called the Surrey Gardens Company, for leasing the Surrey Zoological Gardens, and building a music-hall capable of accommodating 10,000 persons, and at a cost of 40,000*l.*; the usual open-air entertainments likewise to be continued, and M. Jullien to be engaged. Shareholders are to be offered the privilege of a personal ticket in lieu of participating in the annual profits. It is contemplated that the music-hall shall be available for public meetings, floricultural and horticultural exhibitions, and other general purposes. At a meeting recently held in the vicinity of the Gardens, a vote of confidence in any scheme to which Mr. Tyler, the proprietor, might give his concurrence, was unanimously passed, and it was hinted that Mr. Tyler should be engaged as the manager of the new scheme.

BARRACKS FOR THE CITY OF LONDON MILITIA.—We have received a strong statement from one of the Commissioners of Lieutenancy for the City of London, complaining of being gradually committed to the adoption of certain plans for a proposed barracks, to cost some thousands of pounds, when he thought the matter would have been thrown open for the competition of a number of architects.

ELECTION OF SURVEYOR, &c. FOR HACKNEY DISTRICT OF THE METROPOLITAN MANAGEMENT.—At a meeting of the Hackney Board of Management, held on the 11th instant, it was announced that twenty-eight candidates for the surveyorship had sent in applications and testimonials; and a discussion arose as to the reading of the testimonials and the proper mode of election, the result of which was, that a surveyor was elected without the reading of any one of the documents, which the Board by their advertisements had put so many gentlemen to the trouble of procuring and forwarding. The Board at the meeting resolved, before electing the surveyor, that he must devote his whole time to the duties of the office, a clause which had no place in the advertisement. Those candidates amongst the twenty-eight who might happen to be then in attendance were ordered to be called in and asked if they agreed to this resolution. Only six of the number were in attendance, and all signified their willingness to submit to the new requirement. It was then resolved that only those candidates who had interest enough to be supported by a mover and a seconder at the meeting then being held, should be recognised as applicants for the office. This being done, only six were proposed, namely, — Messrs. Wright, Kerr, Gleddon, Crook, Lovegrove, and Hanniford. Messrs. Lovegrove and Crook having the largest number of votes of the six, were put up for the choice of the board, when there voted—for Mr. Lovegrove, 30; for Mr. Crook, 14. Mr. Lovegrove was, therefore, declared duly elected. The board next proceeded to the election of clerks of works. There were two to be elected, and sixty-two candidates for the office. Messrs. Banks and Lloyd were declared the successful candidates. Mr. Ballintyne was then elected inspector of nuisances.

REPORT ON SANITARY STATE OF NOTTINGHAM.—The annual report of the proceedings of the sanitary committee of the town of Nottingham, as presented to the council of the town, has been printed and issued. This is an interesting document, full of hope for the future. The number of deaths registered for the year is 1,574, being 278 less than the preceding year. The decrease has been greatest in zymotic diseases, or those most influenced by the condition of the atmosphere. Last year there were fifty-six deaths from small-pox; this year none. Measles were fifty-one, and scarlatina thirty-five last year, but this year only one and two respectively. The decrease of deaths among children is remarkable. The deaths of those under three years of age have diminished from 810 to 518. The committee acknowledge some difficulty in accounting for the diminution of deaths, but are firmly of opinion that sanitary improvements and the diffusion of sanitary intelligence have much to do with it. Mr. Hawkesley's report on the difficulty as to a proper outfall for the town sewage is appended to the report.

A NEW STEAM HAMMER.—Mr. Naylor, of the locomotive department of the Eastern Counties Railway, has just succeeded in completing a steam hammer, which he believes to be in many respects superior to any other that has yet been constructed. Its peculiar qualities consist in its adaptation to all descriptions of work brought under it, according to the *Norfolk News*. It can deal with a small piece of iron with the greatest precision, be it ever so small, or it can efficiently operate upon a piece of iron 6 or 7 inches thick. Such is the command over it, that it can be made to strike a light or heavy blow at will, and, if necessary, the light and heavy blows can be given alternately, while it is dealing 200 blows a minute. The rate of working may, moreover, if desired, be reduced to less than 100 blows per minute. The principle of this hammer has been patented by Mr. Naylor, who considers it equally applicable as a riveting machine for boiler-making, and iron shipbuilding, as well as for iron making, smith's forging, stamping ore, and, indeed, for all purposes requiring the process of hammering; and, to meet every end, it can be worked by elastic gas, compressed air, steam, or vacuum,

STRIKE OF SHIPBUILDERS AT DUMBARTON.—The strike among the joiners in the yard of Messrs. William Denny Brothers, says a local paper, has now extended to nearly every yard in the burgh, and includes within its compass all departments connected with shipbuilding in which unionists were employed. Some hundreds of labourers, too, who had no connection with unions have been thrown out of employment in consequence.

IRON CHAPEL IN MILE-END-ROAD.—Near Bancroft's Alms-houses, in the Mile-end-road, an iron chapel, similar to those exported to Australia and other English colonies, has been erected. It has been taken by the Independents. The cost of the building was 600*l.* but it has been taken for two years at a rental of 80*l.* per annum, with the option of purchasing at the end of that period. It has been boarded throughout. There is no spire.

GLASGOW.—There is a difficulty it appears in the settlement of the M'Lellan Gallery of Pictures as the public property of the city, as intended by the will of the late proprietor. Some house property which he also left must first be sold, and a sum of 44,000*l.* got for it, otherwise the pictures, if we rightly understand the matter, must be sold to make up this sum. The buildings are those named the Victoria-buildings, and comprise the three large galleries containing the collection itself, besides various rentable premises, part not yet completed or let. The whole is said to be well worth the sum required, but in the present state of matters not likely to be given, unless the City Corporation themselves make the purchase. They would thus, it is estimated, if borrowing the money, pay 1,760*l.* a year, and draw from the premises 2,720*l.* It is to be hoped the valuable M'Lellan collection will not be scattered or lost to the city for which it was intended.——The annual general meeting of the members of the City of Glasgow Fine Art Association, and distribution of prizes, took place on Saturday before last, in Glasgow—the Lord Provost in the chair. The council reported that the subscribers for 1854 numbered 687; for 1855, about 1,400; that in 1854, thirty-five paintings were acquired by the subscribers; and that for 1855, the number to be distributed is forty-seven. The drawing of the lots was then proceeded with. ——The tenders for what is termed the "Blairhulachan Contract" of the Loch Katrine Water-work Scheme, were opened by the Water Committee on Friday before last, and one of them accepted. The offer of the successful competitor is said to be considerably within the estimate of Mr. Bateman, the engineer. This is the most extensive and difficult contract upon the line. It extends from Loch Katrine to the valley of the Duchray Water, being a length of about eight miles, including 2,325 yards of tunnelling, besides masonry, cast and wrought-iron aqueduct, &c.

NEW COURT-HOUSE, DOWNPATRICK.—At a present sentinent sessions, lately held for the county of Down, an application for the sum of 9,000*l.* was approved, for the purpose of building a new court-house in Downpatrick. The design is by Mr. Henry Smyth, M.R.I.A. county surveyor for Downshire. The application has to go before the grand jury, at the ensuing Spring Assizes, for final approval; and tenders for the contract are to be advertised for in the newspapers.

"THE IRISH REPORTER."—Under this title a monthly journal, chiefly devoted to insurance, railway, and commercial matters, house, land, and building pursuits, has been commenced at Dublin. Mr. J. Lyons, architect, is the editor. Scotland has already an organ for the same interests.

BIRMINGHAM ARCHITECTURAL SOCIETY.—On Thursday evening, the 10th, the usual monthly meeting of the above society was held at the Philosophical Institution, Cannon-street, Mr. S. Hemming in the chair, when Mr. Alfred Davidson read a paper on "St. Martin's Church from the Restoration to the close of the last Century."

CONTRACT FOR GRANITE.—A contract has been entered into by the Government for the supply of 20,000*l.* worth of granite from the Gunnislake quarries for the service of the breakwater. These quarries are situate at the head of the river Tamar.

THE QUESTION OF "RESTORATION."—The difference which exists between the restorers and those who have been termed "anti-restorationists," appears to be a very simple and not unnatural difference. The latter are jealous over *everything* which may be regarded as a help to history, however small, and apparently unimportant; while the former view the same features in an artistic light, valuing them *chiefly* as specimens in a great museum of art. The one finds a value in them *per se*, the other deduces a value from them. There is no fear that the *beauty* of form in our old buildings will not be handed down to future generations in the shape of modern "design," but there is a fear that, if the landmarks of our history be renewed, their individuality may be lost. There is a form of beauty, and there is an expression of beauty. It is possible to copy the one, but it is impossible to reproduce the other. Does not the spirit of the designer and the carver infuse itself into the work? Can the modeller produce an expression of a feeling to which he is a stranger? The old proverb of "a stitch in time saves nine" may well be applied to the case of many an old building; for if we take care of them, and remove the accumulated earth, and clean out the choked-up gutters, they will stand for many a long year yet, and architect and archæologist will be friends again. But if you will leave them till they totter upon their old foundations, and strew the ground with their fragments, then blame not the architect who restores, but rather let us condemn the authors of the evil,—the men to whom are entrusted the care of these monuments, and who, by their negligence, are oftentimes the sole cause for the necessity of restoration.—E. W. G.

TENDERS

For buildings at Millwall. Mr. F. E. H. Fowler, architect. Quantities supplied by Morris Evans, surveyor:—

Wood and Sons	£1,183	0	0
Hyatt	1,135	0	0
Richardson	1,077	0	0
Bland	997	0	0
Edwards	995	0	0
Tarrant	950	0	0
Gosling and White	945	0	0
Robinson	917	0	0
Fleming	895	0	0
Williams and Co.	785	0	0
Riley (accepted)	785	0	0

For alterations and additions to Hampstead Workhouse. Messrs. W. G. and E. Habershon, architects. Quantities supplied:—

Harmer	£4,400	0	0
Bottomly	3,858	0	0
Wilson	3,738	0	0
Taylor	3,636	0	0
Cooper	3,500	0	0
Batterbury	3,387	0	0
Higgs	3,333	0	0
Keast and Co.	3,254	0	0
Rudkin	3,170	0	0
Stone	2,983	0	0
Purkiss (accepted)	2,890	0	0

For building public-house at East Jarrow, South Shields, for Wood and Maxwell, brewers. Mr. Matthew Thompson, architect. Quantities supplied:—

Curry and Gibson	£1,795	0	0
Dunlop	1,688	0	0
Pearson (accepted)	1,687	0	0
Angus	1,400	0	0

TO CORRESPONDENTS.

"J. A. P."—"W. D. T." (the question is not one of cost).—"Bewildered Surveyor" (the old Act did not prevent the erection of wood fences.)—"S. S. S." (sulphuric acid would be useless for the purpose. The prevention of damp has been treated of at various times in our pages, but we are unable to refer. Get rid of the cesspool as soon as possible.)—"J. B." (thanks.)—"Anti-flumlag."—"W. T. C."—"J. C."—"X. Y. Z." (we are unable to advise. The Duchy of Cornwall has proper officers attached, who would doubtless consider any feasible proposition submitted to them.)—"Enquirer."—"S. C. F." NOTE.—We are compelled to postpone the remainder of Sir Walter James's Essay on Colour.

NOTICE TO SUBSCRIBERS.—A title-page in colours for the last volume may be obtained *gratis*, on personal application at the Office, by those who prefer it to that which accompanied the index in the closing number. Covers for the volume may be obtained at the Office, price 2*s.* 6*d.* or the publisher will bind it for 3*s.* 6*d.* The complete volume may be obtained, price 21*s.*

ADVERTISEMENTS.

Now ready, price 3*s.* cloth,

THE HOUSEHOLD NARRATIVE of the YEAR 1855. Being a complete Record of the Current Events of the past year. The volumes of the years 1851 to 1854 are always on sale

HOUSEHOLD WORDS OFFICE, 16, Wellington-street North.

Fifth Edition, with Illustrations, 1*s.* 6*d.* cloth

INSTRUCTIONS in HOUSEHOLD MATTERS; or, the Young Girl's Guide to Domestic Service. Written by a LADY, with an especial view to young girls intended for service on leaving school.

London: JOHN W. PARKER and SON, West Strand.

Cheaper Edition, 8*s.* 6*d.*

PRACTICAL GEODESY, comprising Chain Surveying and the use of Surveying Instruments, Levelling, and Traverse Tables; with Descriptions of Modes of Towns, Trigonometrical, Colonial, Mining, and Maritime Surveying.

By J. BUTLER WILLIAMS, C.E. F.G.S.

London: JOHN W. PARKER and SON, West Strand.

Eighth Edition, with Woodcuts, 3*s.* 6*d.*

THE HOUSE I LIVE IN; or, Popular Illustrations of the Structure and Functions of the Human Body.

London: JOHN W. PARKER and SON, West Strand.

Cheap Edition, with Copious Index, 2*s.*

THE EARTH and MAN; or, Physical Geography in its Relation to the History of Mankind. Slightly abridged from the Work of Professor GUYOT, with Corrections and Notes.

London: JOHN W. PARKER and SON, West Strand.

FUEL AND ITS APPLICATIONS.

CHEMISTRY in its application to the Arts and to Manufactures; Fuel and its Applications, embracing coal and its structure and products, gas, oil, spermaceti, safety lamps, &c. and their applications to purposes of steel, woodselves. In two parts. See most fully illustrated with 433 engravings and 4 plates, price 21*s.* 6*s.*

By KNAPP, RICHARDSON, and RONALD.

Vol. II. contains ships, alum, potteries, cements, gypsum. Illustrated, 8vo. price 21*s.* 6*d.*

Vol. III. contains food generally, bread, cheese, tea, milk, sugar, and tobacco. With illustrations and coloured plates, 8vo. price 21*s.*

PROFESSOR WEISBACH'S MECHANICS of MACHINERY and ENGINEERING. 2 vols. with 900 woodcuts. 12*s.*

MITCHELL'S (J.) MANUAL of PRACTICAL ASSAYING. For the use of Metallurgists, Captains of Mines, and Assayers in general. Second Edition, much enlarged, with illustrations, &c. 12*s.*

Catalogue Gratis.

London: H. BAILLIERE 219, Regent-street; and 290, Broadway, New York.

Now ready, dedicated to Sir F. G. Moon, bart. Lord Mayor,

A LARGE MAP of LONDON, WESTMINSTER, and SOUTHWARK, in the OLDEN TIMES, showing all the churches, monasteries, and other important buildings, as they stood before the Reformation; accompanied by an Historical and Topographical Memoir, compiled from ancient documents, &c.

By WILLIAM NEWTON, Author of "The Display of Heraldry."

Price of the Map in sheets, 15*s.*; on cloth, in case, 1*l.* 1*s.*, with the Memoir 1*l.* 10*s.*

London: BELL and DALDY, 186, Fleet-street.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour, as the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, and the highest orders of public buildings, as well as into London dwellings. The Jury in the examining test of all other productions that came before it, pronounced it applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the most are chimney pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lobbies, chiffoniers, consoles, &c.; hall, stone, stair tablets, pedestals, cornices, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 33 and 40, Upper Belgrave-place, Pimlico.

N.B. Country Agents and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

DRAUGHTS ROUND DOORS and WINDOWS.—GREENWOOD'S PATENT INDIA-RUBBER STOPS, to supersede list or leather, for the purpose of keeping out dust and draught round doors, windows, closets, show-cases, &c. making the same air-tight. Price 4d. per foot. Spring Slides for bottoms of doors, 4s. each.

JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London bridge.

TO MANUFACTURERS, BREWERS, or Persons employing any description of Furnaces; and Potters, Chinn, Brick, and Tilemakers, interested in the "Smoke Question."

HANDS'S PATENT, for the economy of fuel, consumption of smoke, and ventilation, will be in full work on WEDNESDAY, the 23rd JANUARY instant. Any persons interested, desirous of seeing the same in action, may apply, if by letter prepaid, to Mr. JOHNSON HANDS, Epsom, where the above can be seen by appointment only.
On the 21st of December last, HANDS'S PATENT ECONOMISING KILN was at work, in the drying chamber that contains 65 000 cubic feet space; the thermometer stood at 70 degrees; out of doors to degrees below Zero.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying moist materials, in any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.
HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE: it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 3d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 4s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TO ORGAN BUILDERS

WANTED, an ORGAN, for St. Mary's Church, Bart-on-Humber. Price not above £—. Tenders to be sent before the 1st of FEBRUARY next, to the Rev. T. P. N. BAXTER.
Barton-on-Humber, January 14, 1856.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the most moderate prices and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 118, Fore street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

PAPER HANGINGS! PAPER HANGINGS!! PAPER HANGINGS!!!—Builders, the Trade, Country Dealers, and others, will find an immense STOCK and endless variety of all classes of PAPER HANGINGS, at W. CROSBY'S MANUFACTORY, 32, Lowther Arcade, Charing-cross, London. Splendid new designs, both in machine and block printing, ready to be supplied by any house in London. Patterns sent for approval in town or country. Cheapest house for panel decorations. Terms, Ca-h.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSSE'S WHOLESALE WAREHOUSE, 22 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

ROYAL POLYTECHNIC.—The POISON STRYCHNINE.—Lecture on the above by J. H. Pepper, esq. daily, at Four and Nine. The poison and the taste used for it—a lecture exhibiting the cowy-hydrogen microscope, with the other Lectures, and the new and beautiful Dissolving Views of Sindbad the Sailor's Second Adventure. Old Shining Children and Schools, half-price. Juvenile Morning, every Wednesday.

METROPOLITAN LOAN COMPANY, Established 1849,
1, CRAVEN STREET, STRAND, LONDON.
Loans are advanced in amounts varying from £5 to £50, to be repayable weekly or otherwise, as may be agreed upon, at a discount of £2½ per cent. for twenty-five weeks, and for 50 weeks at 5 per cent.—Forms may be had, price 2d.; if by post, three postage stamps to be enclosed. ROBERT NORTON, Secretary.

PORTLAND CEMENT WORKS
NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

NOTICE.—Portland Street Lime, Limestone, Coal, Timber, and Sand Works, Walsall.—JOHN BREWER, senior, begs to inform his customers and the public generally that he has retired from business, and transferred the same to his son, Mr. JOHN BREWER, junior, by whom the works will in future be carried on, and tenders his warmest thanks for the very liberal support he has so long received.
JOHN BREWER, junior, in soliciting a continuance of that support accorded to his father, begs to state that all commands will be promptly attended to, and goods sent to any part of the kingdom, either by rail, canal, or land carriage.
Orders received as usual by the traveller, Mr. WILLIAM ROBINSON, who will attend all the Corn-Markets; or at J. B.'s Lime and Coal Works, Vauxhall, Birmingham; and at the General Works, Walsall; to which latter place it is requested that all communications may be addressed.
A large quantity of spar for ornamental rockery work, &c. constantly on hand.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks, at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTH-FLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brick-work, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not shrink, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash, to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.
TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.
Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lea, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

11, George-yard, Lombard-street, City.
ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

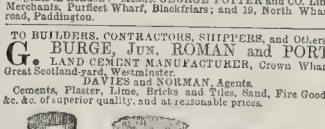
PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that it can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that articles of his manufacture can only be obtained at his Works, Mill wall, Poplar, or at his Warehouse, Fread-street, Paddington.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.



DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.
JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale business, and begs to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms. Application either at Harwich or to his Agent, GEORGE MORRIS, 20, New Ormond street Queen-square, London

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.
The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to pay for what purposes it is required, and print instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.
Agents in London.—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.
G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.
DAVIES and NORMAN, Agents.
Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no coloring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.
L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, Kingscross.

GREY STONE LIME WHARFS, 19, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.
GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 1st, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for exports, or alongside rivers, canals, or railway stations, should be given a few days before required.

Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors,
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 8, ADELAIDE-PLACE, London bridge.

Depôt, Agar Wharf, King's-road, St. Pancras.
VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN. Private Residence, 59, Nelson-square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail from the station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

TO BRICKMAKERS, BUILDERS, and CONTRACTORS.—HOO, near ROCHESTER, KENT.—TO LET, a BRICK FIELD, working three stools, near the river Medway. Royalty one shilling per thousand. Earth of good quality, produces very sound bricks, and can be dug. Apply to Mr. JOHN JEFFERY, Milton-terrace, New Road, Chatham.

AN established BRICKFIELD TO LET, at Shepherd's Bush.—Apply on the Spot, to Mr. ROBINSON, No. 1, Oakland Villa.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect mode of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.
Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietary, and, thirdly, that the "Reviewers on THE JURIES," page 681, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TO BUILDERS and OTHERS.—CANAL BOAT for SALE, constructed to carry thirty tons. Now working on the canal. Price £5. For particulars, address, M. S. 20, Duke's-terrace, Haverstock-hill, Hampstead-road.

WANTED, 4,000 feet 1¼ inch ELM BOARD, 4,000 feet 1-inch ELM BOARD, 300 feet 1-inch ELM BOARD. Also thirty ELM TAIL BOARDS, 6 feet long by 20 inches wide and 12 inches thick. Also five OAK TREES, containing about one load [illegible] with Pieces of the above may be at the [illegible] Apply to Messrs. MEESON and CO. Lime Works, Grays, Essex. The oak is wanted directly, and a portion of each sort of board. The remainder within three months.

TO BUILDERS AND OTHERS.

Spruce ditto	18	0	"
Yellow Battens	12	10	"
Pine Planks, 12ft. 3 in. by 11	24	0	"
Honduras Mahogany, in logs, 5d. per foot.			

Prepared Flooring, &c. at equally low prices. A list forwarded on receipt of a postage-stamp. Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.

Address, E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
King's-road, Chelsea, and Wilton-road, Pimlico.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

½ inch White, 13s. 6d. per square.		½ inch Yellow, 15s. per square.	
¾ ditto	18s.	¾ ditto	16s. 6d. "
1 ditto	18s.	1 ditto	20s. "

Laths, 30s. per load.

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.

ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

GEORGE SMITH, TIMBER-MERCHANT, LONDON.—Address to No. 18, Binfield-road, Clapham-road, Stockwell; or Jamaica Coffee-house, City. Goods delivered from the Docks. PREPARED FLOORING, &c. from the Saw-mills. Goods in Bond for Exportation.

N.B. A large Stock of Dry Prepared Flooring, &c. from Two to Four Years Old.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORING and MATCH BOARDING, seasoned, and ready for use, from 9-inch to 14 inches thick. Also five OAK Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Pantile Laths, Sash Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER, planks, deals, and battens on sale, direct from the importers; prepared floorboards, moulding, pine and cut deals, slating battens, laths, English oak plank, and sashes, at reduced prices for cash. The Monthly Price Current forwarded on application.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS. J. SIMMONS begs to acquaint his customers and friends that in consequence of the increasing trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments tombs, and every description of marble and stone work also manufactured on patent principles. Old Wood Mouldings re-cut. DEVONSHIRE-TERRACE, HARROW-ROAD, PADDINGTON. Specimens from the street. Price Lists will be forwarded shortly be ready; to be had on application, or if forwarded, by enclosing a post-office stamps. Please not to mistake No. BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, extensively used in Paris and other Continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 2s. per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulding Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

Pumps of any size, single or double barrel, up to double 12 in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 28s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers. Upper Ground-street, Blackfriars-bridge (Surrey Side).

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels,

Plain or Sliding Telescope Suction,

ON HIRE.

SINGLE AND DOUBLE PUMPS, all sizes, to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.

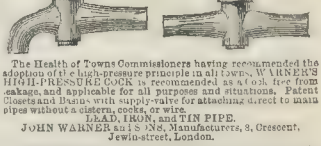
TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.

In the old-fashioned Pump Standard, the cumbrous carriage and expensive brickwork is unnecessary, rendering the price considerably less than Pumps made on the old plan.

Deep and Water Basins for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same plan.

JOHN WARNER & SONS, 8, Crescent, Jewin-street, London. Manufacturers and Patentees.

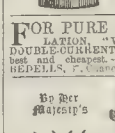


PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

STEAM-ENGINES and MACHINERY for SALE.—TEN STEAM-ENGINES, from One to Twelve-horse Power, with or without Boilers. A set of Three 3-inch gun-metal Pumps, with crank, shaft, connecting-rods, and rising main, suitable for a deep well. A quantity of plummer blocks, couplings, shafting, and riggers; screw presses; a 30-inch paper cutting machine, lathes, and drilling-machines; a waggon boiler, suitable for a tar or water tank; a wrought iron cistern, and a large boiler truck.—Apply to D. W. ASH, 157, Southwark-bridge-road, Newington Causeway, where the above can be seen.

TO BE DISPOSED OF, SIX PILE-ENGINES, complete and in good condition.—May be seen at the Imperial Gas Works, Fulham.—For price, apply to Mr. PATMAN, 68, Theobald's-road, Bloomsbury.

TO WATER COMPANIES AND PLUMBERS.



HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD.—This Guard allows a free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at the Office, 65, Fenchurch-street, London.

FOR PURE AIR and PERFECT VENTILATION, "WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS" are undoubtedly the best and cheapest.—Sole London Agents: LANDER and REPELLS, 7, Cloisters-lane.

By Her Majesty's Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Private and Public Buildings, giving a constant change of air.

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use. Also,

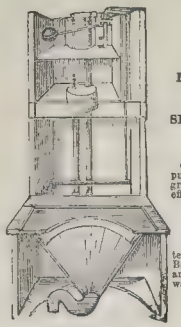
VENTILATING ROOF LIGHTS, for Slate or Tile Roofs, Water Paint or Putty.

Prospectuses sent on application.

London Depôt—DEACON and MANGER, 141, Minories, City.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.



Pan, 3s. 6d.

Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

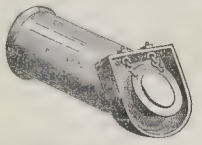
Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.



I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

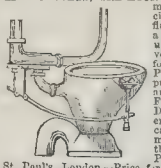
AYLESFORD POTTERY COMPANY,
BELVEDERE-ROAD, LAMBETH.
MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during that period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.: The New Public Markets, Wellington and Chelsea Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; also by the low rate themselves established as Potters, beg to offer their services to Contractors, the Trade, &c. of a superior quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

MILLWALL POTTERY.

WILCOX and CO. Manufacturers of every description of white and printed CLOSET-PANS, URINALS, TABLES, PLUG BASINS, &c.
DEPOT ARTHUR-STREET, NEW OXFORD-STREET.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE
No. 7.



is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS,

manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE POWERFUL FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

SUPERIOR LAND DRAINAGE.—

AGRICULTURAL DRAIN PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

SUPERIOR STONEWARE GLAZED

PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered. October 1, 1855.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.

—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with its cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES,

acknowledged to be the best in use; hydrants or fire-plugs; well sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

WILLIAM GILBERT, Tividale Pottery

and Blue Tile Works, near Tipton, Staffordshire.—The BLUE WARE SANITARY PIPES made by W. GILBERT are of the only GLAZED pipes of the kind manufactured in England. They are well vitrified, smoothly glazed, and very durable, being subjected to intense heat in the kilns. Being moulded by machinery, they are as smooth and straight as stoneware pipes; will bear a greater pressure, and endure in the drains a longer term than any other material. The sockets are deep, and made much stronger than the body of the pipe, so as to resist all unequal pressure under ground. These pipes are cheaper than stoneware, and may be had in 2 feet lengths, of 2 in. 3 in. 4 in. 6 in. 9 in. 12 in. 15 in. and 18 in. bore,—with all kinds of syphons, junctions, bends, gullies, and sink grates to match. Price and descriptive list of the patterns. Glazed stoneware sewerage pipes, &c. &c. Terra cotta clay brackets, trusses, vases, fountains, busts, statues pedestals, &c.

PATENT DRAIN-PIPES, UNGLAZED,

manufactured by ARTHUR C. FRANCIS and CO., Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "
9	"	"	"	"	9d. "
12	"	"	"	1s. 6d.	"
15	"	"	"	2s. 0d.	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. Their great resistance to wet is overcome by this manufacture. And it is well known, that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

VICTORIA POTTERY, LEIGH,
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES in accordance with the rules established by the Commissioners of Sewers, Bends, Traps, Closet-pans, Jars, Butts, and other articles in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Hair-bridge-wharf, Stratford, Essex.

The Committee do not bind themselves to accept the highest or any Tender. Plans may be seen and particulars obtained at the Architect's Office, Guildhall, any day (Sundays excepted), between the hours of TEN and FIVE.

MEREWETHER.

Guildhall Jan. 7, 1856.

PREMISES TO LET, near the Elephant and Castle, 300 feet deep, suitable for a Timber-yard, Sawmills, livery stables, or any manufactory requiring space. Inquire of Mr. JAMES LEMON, Upwell-place, Camberwell New-road, Kennington.

CHARING-CROSS, LONDON.—To BANKERS, MERCHANTS, and OTHERS.—TO BE LET or SOLD, with or without the Furniture and Fittings, a most convenient HOUSE in this favoured locality. The premises have hitherto been occupied as a Life Assurance Office, but are available for a Branch Bank, Railway, Mining, Parliamentary, Gas, or other Public Office, the Board-room, Secretary's, and other offices being fitted for immediate occupation.—Particulars of Mr PALMER, Upholsterer, 24, Great James-street, Bedford-row, London.

TO BUILDERS.—TO BE LET, on a Rebuilding Lease for 80 years, THREE FREEHOLD HOUSES, in Jacob-street, Bermondsey. They form a frontage of 41 feet 6 inches, with a new sewer, recently built, and near the Thames. For particulars apply to Mr. MARSH, Estate Agent, 2, Charlotte-row, Mansion-house.

FREEHOLD BUILDING SITES, near the STRAND.—TO BE SOLD, or LET, in one or more lease, BUILDING GROUND, situate between Clement's-inn and King's College Hospital. The area is large, and suitable for a Model Lodging House, Stocks of Offices, or Warehouses, or several small Houses.—Apply to Mr. GEO. TOUSSAINT, No. 17, Grace-church street.

TO BE LET, SEMI-DETACHED VILLAS, in immediate neighbourhood of Victoria New Docks, and in parish of Plaistow. Each house contains two parlors and breakfast-room, three bedrooms, kitchen, scullery, pantries, and W.C. They are completely fitted up with every convenience,—coppers, water, stoves, and blinds. They are partially grained oak throughout, and all are papered with newest patterns. They are ready for immediate occupation, and, in consequence of the failure of the builder, they will be let for the low rent of 28l per annum. Taxes are very moderate, and railroad and omnibus conveyance within easy distance.—Apply to Messrs. WM. G. and E. HARRISON, Architects, 28, Bloomsbury square, London; at whose offices plans and drawings may be seen.

CANNON-STREET. — TO BE LET, a HOUSE, 87, Cannon-street, City, on a LEASE for Twenty-one Years. To Tender, addressed to Mr EDWARD SAXTON, solicitor, 54, Cornhill.

UPPER THAMES-STREET. — TO BE LET, by Tender, by the Worshipful Company of Joiners, on lease from Midsummer, 1856, the extensive property known as JOINERS'-HALL, consisting of warehouses and other rooms, dwelling-house, the plot of ground in Pudding-alley, and the PREMISES, Nos. 81 and 82, Upper Thames-street, adjoining the said hall. The aforesaid property may be TENDERED for in separate lots, or for the whole or any part. The Tenders to be delivered at the Clerk's Office, No. 5, Size-lane, on or before the 31st MARCH next. The company do not bind themselves to accept the highest Tender. Particulars may be obtained from Mr. F. POUGET, Architect, 30, Great St. Helen's, or from B. GRANGER, Clerk to the Company.

BELGRAVIA, SOUTH. — DESIRABLE RESIDENCES TO BE LET or SOLD, in Gloucester terrace, Stanley, Winchester, Cumberland, and Gloucester Streets, and Bacon-street, Bethnal-green.—Apply to Messrs. CHAPMAN and PARSONS, Builders, St. Katherine's Wharf, Pimlico; or to Mr. T. S. SMITH, Auctioneer and Estate Agent, 44, Lombard-street.

TO BRICKMAKERS, BUILDERS, and Others.—BUILDING GROUND, abounding in brick earth, situated in North-End, Fulham (next to the Hermitage). The [illegible] is now prepared to LET this ground, containing upwards of Two Acres, for brickmaking and building purposes.—For particulars, apply to Mr. REBEKEY PRICKETT, Surveyor, &c. 17, Chancery-lane, and 23, Fulham-green

SITE for a CHURCH.—WANTED, a SPACE of GROUND for the erection of a church, situated within or near the following boundaries: Finsbury-square on the south, Pentonville-road to the north, Kingsland-road to the east, and Goswell-road to the west. Address to an intending purchaser, F. C., Ashtead Woods, Ashtead, Surrey, Mark-lane

WANTED, on LEASE, in or near the City, PREMISES, suitable for a Builder, with sufficient working room for twelve or fourteen joiners. Address to A. B. 87, Weymouth-terrace, Hackney-road, stating terms, &c.

WANTED to PURCHASE, within Two Miles of Charing-cross, the neighbourhood of Camden Town or Somers Town preferred, a Plot of FREEHOLD LAND, about [illegible] feet, suitable for the erection of manufactory premises.—Address, with particulars, to Messrs. WIGG, SON, and OLIVER, Architects, Bedford-row.

MANUFACTURING WATERSIDE PREMISES, with STEAM POWER, TO BE LET, in LIMEHOUSE, MARSH, Poplar.—Suitable for a Distillery, Manufacturing Chemist, or Colour Manufacturer, [illegible] Regent's Canal, and a few minutes' walk of the Brunswick Basin of the Blackwall Railway. The premises comprise a [illegible] and a half House, a commodious family residence, with garden, a wharf, with [illegible] and a capital [illegible] to a large iron tank, capable of holding 10,000 gallons of water; also a large filtering-pond or reservoir for fresh water.—Apply to Messrs. FULLER and HORSEY, Billiter-street, City

TO ARCHITECTS.—TO BE DISPOSED of, a BUILDING PRACTICE which has been established four years, in a large and rapidly improving market town, in the West Riding of York-shire.—For particulars, application to Mr. W. HEARLEY, Solicitor, Tewkesbury.

TO BE DISPOSED OF, the BUSINESS of a MANUFACTURER and TRADESMAN in an important provincial town. The business has been established, and is of first respectability and connections. It is not a shop and counter trade. Every information will be given to an [illegible] person possessing a knowledge of the colour trade, and having [illegible] worth attention. Apply to Mr. SIDNEY SMITH, 4, Charlotte-row, Mansion-house, City, London.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX, Brook, & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, January 19, 1856.

BOARD of WORKS.—Whitechapel District.—Required for this district a SURVEYOR, to perform all the duties required by the Metropolis Local Management Act, and such others connected with his office as may be required by the Board. His whole time to be at the disposal of the Board. Salary 300l. per annum.—Applications for the situation to be in writing, and sent in to me, with written testimonials, on or before the 2nd of FEBRUARY next.

H. S. MITCHELL,
Vestry Clerk of the Parish of St. Mary, Whitechapel.
Vestry Clerk's Office, 5, Great Prescot-street, Whitechapel.

TO ENGINEERS AND SURVEYORS.

THE LOCAL BOARD of HEALTH of HASTINGS require a SURVEYOR able to undertake the duties of that Office, under the Public Health Act, 1848. He must be competent to prepare plans, sections, drawings, and estimates, and to be conversant with the practice of engineering generally, and able to superintend and carry out the execution of all necessary works of drainage and others, which will fall within his duties. He will be required to devote the whole of his time to the duties of the office. Salary, 200l. per annum. He will also have to act as Surveyor to the Corporation, with an additional salary of 50l. per annum.—Applications, with age, testimonials of qualification and competency, to be addressed to "The Local Board of Health," indorsed "Application for Office of Surveyor," are to be forwarded, under cover, to the Town Clerk, Hastings, on or before the 21st day of FEBRUARY next.

JOHN G. SHORTER, Town Clerk.

Hastings, January 19, 1856.

SURVEYOR WANTED.—The Local Board of Health and the Council of Great Yarmouth, are desirous of ENGAGING a qualified PERSON to perform the duties of Surveyor and Inspector of Nuisances to the Board of Health, and Surveyor to the Town Council. The surveyor will be allowed to carry on his private practice except in matters affecting the interests of the Council and local Board. Total salary, 150l.—Applications, stating age, with testimonials, are to be addressed to the Town Clerk, not later than the 30th day of FEBRUARY next, endorsed, "Application for Surveyorship."

Great Yarmouth, January 18, 1856.

BOARD of WORKS for the HOLBORN DISTRICT.—The Board will meet at the Workhouse, in Little Gray's-Inn-lane, on MONDAY, the 4th day of FEBRUARY next, at SEVEN o'clock in the afternoon, to ELECT the following OFFICERS under the Metropolis Local Management Act, viz. a MEDICAL OFFICER of HEALTH, at a salary of 200l. per annum; a SURVEYOR, at a salary of 200l. per annum; an INSPECTOR of NUISANCES, at a salary of 105l. per annum; and a MESSENGER, at a salary of 25l. per annum. The Surveyor and Inspector of Nuisances will be required to reside in the district, and to devote the whole of their time to the service of the Board. Candidates are requested to attend on the day of election, and to send in their testimonials on or before the first instant, under cover, to the Clerk to the Board, of whom full particulars of the duties to be performed may be obtained.

S. W. HOPWOOD, Clerk.

Office, 47, Chancery-lane, January, 1856.

ARCHITECTURAL EXHIBITION and COLLECTION of PATENTS and MANUFACTURES not nected with Building, at the GALLERIES, 54, SUFFOLK STREET, Pall-mall East, NOW OPEN, from NINE till dusk. Admission, One Shilling; or at all times to the Galleries, and to all the Lectures, by season tickets. Half-a-Crown each. Lecture for TUESDAY EVENING, JANUARY 29, at EIGHT o'clock, "On the Application of Painted Glass in Architecture," by CHARLES WINSTON, Esq.—Lists of Lectures, Tickets, and all particulars to be had at the Galleries.

GEOLOGY, KING'S COLLEGE, LONDON.—Professor PENNANT, F.G.S. will give a COURSE of LECTURES on GEOLOGY, to commence on FRIDAY MORNING, JANUARY 25, at NINE o'clock, and to be continued on each succeeding WEDNESDAY and FRIDAY, at the same hour.

R. W. JELF, D.D. Principal.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the principles of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of Chlon and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 3l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

COMPETITIONS.

CEMETERY, MANSFIELD, NOTTINGHAMSHIRE.—To ARCHITECTS, SURVEYORS, LANDSCAPE GARDENERS, and OTHERS. Plans, Designs, and Drawings are required for building Two CEMETERY CHAPELS (adjoining each other), together with Lodges and Entrance Gates, for the above proposed Cemetery. The expense of the Chapels is not to exceed the sum of 500l. and of the Entrance gates, with a Lodge on each side, the sum of 400l. Plans to comprise elevation and ground plans, accompanied by approximative estimate of expense. The sum of 7l. is offered for the plan considered to be the best; 5l. for the second best, and 3l. for the third best. Plans and drawings are also required for LEVELLING, PLANTING, and FENCING the said proposed cemetery, and laying out the walks therein. The sum of 10l. is offered for the plan considered to be the best, and 5l. for the second best. The above amounts are offered by way of premium, and the Architect whose plans are accepted, will be engaged to overlook the erection of the buildings, at the usual commission of five per cent. upon the outlay. No contractor to be paid for plans, and no plans to be paid for, except the three best for the buildings, and the two best for laying out the grounds. The plans to be sent to the Clerk, sealed up, and endorsed "Plans for Mansfield Cemetery," on or before the 4th day of MARCH next. By order of the Burial Board,

Mansfield, 15th January, 1856. R. J. PARSONS, Clerk.

TO ARCHITECTS and OTHERS.—DESIGNS are required for ERECTING a TESTIMONIAL COLUMN, of stone, of about 100 feet in height, on some conspicuous spot, in the County of Dorset. The person whose design is selected, will receive a premium of 10l. Such design to be accompanied with an estimate of the probable cost of such column, with and without a staircase.—The plans or designs to be sent (prepaid), to the undersigned (from whom further particulars may be obtained), on or before the 7th day of FEBRUARY next. FRANCIS T. JOHNS.

Blandford, Dorset, January 19, 1856.

CONTRACTS.

TO BUILDERS.—Any person willing to enter into CONTRACT with the Justices of the Peace of the county of Hereford to BUILD MILITIA STORE-ROOMS, with land recently purchased by such county, being part of the Bartonsham Estate, in the parish of Saint Owen, Hereford, are desired a sealed TENDER to my Office at the Shire Hall, Hereford, on or before the 6th day of FEBRUARY next, between the hours of TEN and TWO. Plans and Specifications of the work may be seen at my said office each day, between such hours, and further particulars may be obtained of Mr. O'GRADY, County Surveyor, King's Acre, near Hereford. Parties sending Tenders need not be present at the above named day, but they will be communicated with prior to the day on which such Tenders will be submitted for approval. JOHN CLEAVE, Clerk of the Peace.

Hereford, 19th January, 1856.

PERSONS wishing to TENDER for REBUILDING STABLES at Brixton, &c. can see the drawings at Mr. FOWLER'S Offices, 4, Garden-court, Temple. Lowest Tender not necessarily accepted.

STAINES UNION.—To BUILDERS, &c. Notice is hereby given, that the Guardians of the above Union propose to ERECT a HOSPITAL in accordance with a plan and specification deposited for inspection at the Staines Union Workhouse. All persons desirous of CONTRACTING with the Guardians for the same, are desired to send sealed TENDERS, addressed "To the Building Committee Staines Union Workhouse, Staines," on or before the hour of TEN o'clock of TUESDAY, the 5th FEBRUARY next. The Guardians will not necessarily accept the lowest or any Tender.

By order of the Board,
RANDOLPH HENRY HORNE, Clerk.

Staines, January 16, 1856.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall-mall, London, on or before WEDNESDAY, the 20th day of FEBRUARY, 1856, from persons desirous of contracting for extensive ADDITIONS and ALTERATIONS to the WESTERN HEIGHTS BARRACKS, at Dover. Drawings and specifications of the works to be executed, may be seen by persons fully competent to undertake the work none others need apply), and forms of Tender obtained at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock, from FRIDAY, the 1st of FEBRUARY, to TUESDAY, the 19th of FEBRUARY, 1856, Sundays excepted. A person belonging to the Royal Engineer Department will attend each day at the Western Heights Barracks, from TEN to TWELVE o'clock, to point out the work and explain the drawings. The party whose Tender may be accepted for the work will be required to enter into a bond with two eligible securities, jointly and separately, to be bound under a penalty of 2,000l. for the due performance of the contract. Tenders for the above work to be addressed to the Director General of Contracts, Pall-mall, London, and endorsed "Tender for work at Dover."—N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, January 16th, 1856.

BRAINTREE LOCAL BOARD of HEALTH.—The Local Board of Health for the district of Braintree, in the county of Essex, do hereby give notice, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:—

CONTRACT No. 7.—For Brickwork and covering for Reservoir or High Service Iron Water-Tank or Reservoir.

CONTRACT No. 8.—For a High-Service Iron Water-Tank or Reservoir.

CONTRACT No. 9.—For the Erection of a Cottage, Engine-house, Boiler-house, Chimney-shaft and Shed.

CONTRACT No. 10.—For Hydrants.

CONTRACT No. 11.—For Sluice Valves.

CONTRACT No. 12.—For Artesian Well, Bore-hole, and Iron Pipes.

Specifications (prices to be stated) and forms of Tender may be obtained at my Office, or at the Office of JAMES FENTON, Esq. Engineer, Chelmsford; at either of which places the drawings and plans of contracts may be seen, on or after the 22nd JANUARY, 1856. Sealed Tenders to be delivered to me on or before the 9th day of FEBRUARY, 1856. The Board do not bind themselves to accept the lowest or any Tender.—By order of the Board.

Braintree, Jan. 16, 1856. A. CUNNINGTON, Clerk.

CAMBRIDGESHIRE, ISLE of ELY, and Borough of CAMBRIDGE PAUPER LUNATIC ASYLUM. TO BUILDERS.—TENDERS are required for the ERECTION of a PAUPER LUNATIC ASYLUM, with Lodge and Farm Buildings, at Fulbourn, about three miles from Cambridge, for such Builders who may be desirous of Tendering, may inspect the drawings and specifications of Works, at the Office of the Clerk to the Committee of Visitors, at Cambridge, on and after the 14th day of JANUARY inst. between the hours of TEN and FOUR. Lithographed bills of quantities and forms of Tender, and of schedule of prices, may be had on application to Mr. GEORGE FOWLER JONES, Architect, York, on payment of three guineas. The Tenders must specify the cost of the main building, and that of the lodge and farm-buildings separately. Sealed Tenders are to be sent, under cover, addressed to the Clerk to the Committee of Visitors, not later than 12th FEBRUARY next; and any Tender not in accordance with the form supplied by the architect, will be rejected. The party whose Tender may be accepted will be required to enter into a bond, with two responsible sureties, jointly and severally in the sum of 10,000l. for the due performance of the contract. The Committee of Visitors do not bind themselves to accept the lowest or any Tender.

By order of the Committee of Visitors,
Cambridge, January, 1856. DAVID KING, Clerk.

SWANSEA LOCAL BOARD of HEALTH.—WATERWORKS.—To IRONFOUNDERS, PIPELAYERS, and OTHERS.—The Swansea Local Board will meet on the 5th day of FEBRUARY next, to receive Tenders from Parties who may be willing to undertake either of the following Contracts:—

CONTRACT No. 2.—For the Supply of a Quantity of Sluice Valves, Hydrants, &c.

CONTRACT No. 3.—For the Supply of about 175 tons of Cast-Iron Pipes and other Castings.

CONTRACT No. 4.—For Excavating the Ground, and Laying and Jointing about 7,500 lineal yards of Cast-Iron Mains, together with the laying of a quantity of Hydrants, Sluice Valves, &c.

The Drawings and Specifications may be seen on and after the 22nd instant, and any further information had on application at the Offices of the Board, Guildhall, Swansea; or at the Office of ROBERT RAWLINSON, C.E. 71, Parliament-street, Westminster. Duplicate forms of Tender, &c. may be obtained upon payment of 2s. 6d. per set.—Sealed Tenders to be sent in to the Clerk to the Local Board, on or before the 4th day of FEBRUARY next. C. B. MANSFIELD, Town Clerk.

Swansea, January 8, 1856.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of a new CHURCH at Gravelly-hill, near Birmingham, may obtain orders to see the drawings, specification, &c. on application to the Rev. HENRY HAGGARD, Perpetual Curate, Great Barr, near Birmingham; or to the Architect, Mr. GEORGE GILBERT SCOTT, 25, Spring gardens, London. Tenders to be sent in on or before the 26th day of FEBRUARY next, directed to Mr. FRANCIS E. SCOTT, Bart. Great Barr Hall, near Birmingham. The lowest Tender will not necessarily be accepted. The drawings, specification, &c. will be at Great Barr for the inspection of builders having order on and after MONDAY, the 28th inst.

January 21st, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

SAINT LUKE, MIDDLESEX.—Notice is hereby given, that on TUESDAY, the 29th of FEBRUARY next, the Vestry will meet at the Vestry room of the Church, Saint Luke's, Old-street, at THREE p.m. to ELECT a SURVEYOR to carry out the provisions of the Metropolis Local Management Act. Persons willing to undertake the office may be known and obtain any information they may require, at the Workhouse in Golden-lane, on application to the Clerk, who will be forwarded to me on or before the 30th instant; and the applicants must be prepared, on a day of which they will be informed, to wait on a committee of the vestry, who will meet in the interim, to see them and, if needful, to reduce the number for the consideration of the vestry to six.

JOHN PARSON, Vestry Clerk.

Board Room, Workhouse, Saint Luke, Middlesex, 21st January, 1856.

MIDLAND RAILWAY.—The Directors of the Midland Railway Company are desirous of receiving TENDERS for the following WORKS of the DERBY and Chesterfield Extension, viz.:—

1. Two Viaducts, the one over Derwent Valley Road, and the other over Derwent River.
2. Two Bridges, one over Derwent River, and the other over Derwent Valley Road.
3. Two Bridges over Derwent Valley Road.
4. Two Bridges over Derwent River.
5. Two Bridges over Derwent River.
6. Two Bridges over Derwent River.
7. Two Bridges over Derwent River.
8. Two Bridges over Derwent River.
9. Two Bridges over Derwent River.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"16, Hyde-park Gate, Kensington, February 24, 1854.

"My dear Sir,—The Air Warmer continues to work very satisfactorily in fact, with regard to the main body of the house, and during this weather is charming, even in the painting-room. Mrs. Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"Mr. J. Jobson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield.

"Stanhope-lodge, St John's-wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England, and this has increased with increasing years and decreasing strength; I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the hall and passages of my house; but I have never succeeded till now in producing an equal temperature over every part, and having that temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and have the climate of May within doors in the months of December and January. The servants learnt its proper management in a few days without difficulty, and its economy in fuel is as remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall lose no opportunity of heartily advising its adoption to all who desire to protect themselves against the changes of temperature in their dwellings.—I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Roscoe-place, Sheffield."

M. E. HADFIELD, Esq Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855.

"My dear Sir,—We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable oppressive odour produced usually by Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective.—I am, my dear Sir, yours faithfully,

"Mr. J. Jobson Smith, Roscoe-place." "M. E. HADFIELD.

WILLIAM RUTSON, Esq.

"Newby Wiske, Thirsk, 15th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the [illegible] evident to an unoccupied and unfurnished house, with all the doors open into the staircase, it is keeping up a very genial influence over the temperature, even during this severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 18s. 6d per ton, the rate at which it has been fired for the last two or three months, is 1d. per hour.

"I am, Sirs, yours truly, "WILLIAM RUTSON.

"Messrs. Stuart and Smith.

"P.S.—Mr. Rutson, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3s. 6d. for coke—say about 3d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop-road, February 27th 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the comfort has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase, and passages, being a reservoir of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have had the general run of the house with out the fear of a relapse. To many invalids the invention will prove invaluable, giving them the freedom of their habitations instead of confining them prisoners to one apartment. Believe me, my dear Sir, very truly yours,

"Mr. Jobson Smith." "EDWARD MARTIN.

E. F. SANDERSON, Esq.

"West-street, Sheffield, 27th March, 1855.

"Gentlemen,—The Gill Air Warmer you put up for me last year at Endcliffe, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country; but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling-houses most equably comfortable in point of temperature.—I am, yours very truly,

"Messrs. Stuart and Smith, Roscoe-place." "E. F. ANDERSON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

ST. PANCRAS IRONWORKS,

OLD ST. PANCRAS-ROAD, OPPOSITE THE OLD CHURCH, LONDON.

☞ ADDRESS—THE MANAGER OF ST. PANCRAS IRON WORKS, OLD ST. PANCRAS-ROAD, LONDON.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-work with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the bag. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The New Hook for the Rack, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket, combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM and HALLEN'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and imperishable to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Bracket, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse removed from 81 to 83, Upper Thames-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.
THIS IS THE ORIGINAL PATENT

for important improvements in stable fittings, hay-rack, manger, and water-trough, as one fixture, including a method surpassing all others for conveying the straps and halter-weights to the back of the fixture, to prevent the horse being cast in the stall. Stable Fittings of every description, plain, enamelled, or galvanized. Also the newly invented Loose Box Fittings, Surface Gutters with moveable cover-plates, Stable Posts, Ramps, Sills, and all kinds of Stable Furniture in stock.
JAMES BARTON, IRON FOUNDER, &c. 370, OXFORD-STREET, London.

MANUFACTURER of KITE'S PATENT VENTILATING and SMOKE-CURING CHIMNEY CAPS, patronised by her Most Gracious Majesty—100 on Buckingham Palace. In use also on St. James's Palace, Windsor Castle, Government Offices, &c. Wrought iron, 25s.; zinc, 30s.; cast iron, 35s. each; the latter as durable as the building itself.
Drawings and Price-lists forwarded on receipt of two postage stamps.
Address, BARTON'S Iron Works, 370, Oxford-str-et, London.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure locks, &c. Manufacturers of Dr Arnott's improved ventilators.—HULETT and CO. 22, High Holborn.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

IRON FOUNDRY,

HARROW-STREET, LANT-STREET, SOUTHWARK.

W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

IMPERIAL IRON FOUNDRY, and ECONOMIC RANGE MANUFACTORY.

Three ft. wide	£8 10
Three ft. three in.	7 0
Three ft. six in.	7 15
Three ft. nine in.	9 0
Four ft	10 10
Four ft. six in.	12 12
Five ft.	14 14

Coorings, 8s. per foot.
Fixing, 6s. per foot.

This valuable KITCHEN RANGE, the Manufacturer has much gratification in stating, has been in use several years, and given the utmost satisfaction. It may be used either with the fire open or closed, thereby avoiding the suction so naturally felt against having the fire at all times shut up, which is well known to generate a close unwholesome vapour.

The Prize Medal and Honourable Mention was awarded to it in Range at the Great Exhibition of 1851.

To be seen in operation at the Manufactory's,

J. SHEWIN, 58, TABERNACLE-WALK, FINSBURY.

Castings of every description in Loam or Sand.

FOUNDRY AND IRON WORKS,

63, DRURY-LANE, and CHARLES-STREET, DRURY-LANE

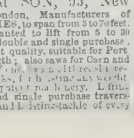
GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes Wheels, Pinions, Lathes, and Steam-engines, Ranges and Hot-plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and OG Gutters, Air bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 50 per cent. cheaper than Terra-cotta.



Estimates given for Iron Buildings, Wrought-iron Roofing Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors Book safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,

168, DRURY-LANE, and CHARLES-STREET.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense Stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 2s. per inch, and upwards.

6-feet Kitchen Ranges, 9d. 6d. 7s. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings.—

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Ridgmount place, Hampstead, March 9th, 1855.

Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extraordinary Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels, mansions, club-houses, private houses, and the army; having cooked in one day 1,000 fowls, and many cwts. of ham, beef, veal, mutton, lamb, tongue, &c.; resulting in one department a baron of beef weighing 330 lbs. in nine hours, fifty-three minutes, presented by J. Banister, esq. Threadneedle-street, to the directors, for the banquet given to the foreign ministers. They have been in full operation for ten months, and are now in as perfect order as when first finished. They have not cost one shilling for repairs.

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.

FENDERS, STOVES, and FIRE-IRONS.

Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 11s. to 5l. 10s.; ditto, with ormolu ornaments and two sets of bars, 5l. 10s. to 19l. 19s.; bronzed fenders, complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 3l. 15s. to 7l. 7s.; fire-irons, from 1s. 9d. the set to 2l. 4s. Sylvester and all other patent stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges.

Firstly—From the frequency and extent of his purchases; and

Secondly—From those purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS.

The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufactures, in Metal and Glass, all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are NOW SHOWN over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the largest and most remarkable in the kingdom. viz. from 12s. 6d. two light, to 16l. 16s.

THE BEST SHOW of IRON BEDSTEADS is the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses, from the Best to the most Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d.; and Brass, from 3l. 3s. each. Handsome Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.

The alterations and additions to these extensive premises (already by far the largest in Europe), which occupied the whole of last year, pleted, they are of such a character that the entire of LIGHT HOUSES to day dc to the display of the most magnificent Stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver Plated Goods, Baths, Brushes and Turnery, Lamps and Gasfittings, Iron and Brass Bedsteads, and Bedding), so arranged in Sixteen Large Show-rooms, as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere

Illustrated Catalogues sent (per post) free.

39, OXFORD-STREET; 1a, 2, and 3, NEWMAN-STREET; and 1a, 2, and 3, PERRY'S-PLACE. Established 1820.

WARMING LARGE BUILDINGS, &c.—CUTLER and SONS respectfully state that they are prepared to Contract for the Warming of Churches, Chapels, Air Apparatus for effectually and economically Warming Churches, and all other public or private buildings, which they undertake in every instance to guarantee. Three in operation daily in the store and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (Class 30), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Mansions, Halls, Counting-houses, &c. CUTLER and SONS, Manufacturers to Her Majesty, 40, Great Queen-street, Lincoln's-inn-fields, London.

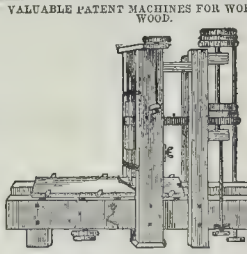
ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the store and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive magnitude, are especially warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

FRYER, MANUFACTURER of WARMING and VENTILATING APPARATUS.—Works—Fetter-lane, York.—J. FRYER having had twenty years' experience in warming buildings by the circulation of hot water, now fixes, and with confidence recommends, Dr. Arnott's Hot Water Clad Self-feeding Boilers, requiring no brickwork in fixing. These boilers are filled from the top with coke, and will burn at a trifling cost from eight to twelve hours. J. F.'s Hot Water Apparatus, ornamental and plain, suitable for Entrance-halls, Staircases, &c. is confidently recommended, and is easily taken to pieces for removal.—J. FRYER, Manufacturer, Fetter-lane, York.

BUILDINGS HEATED by HOT WATER.

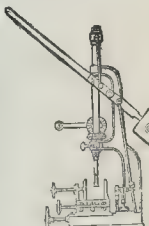


G. B. COOPER, IRONWORKS, 121, DRURY-LANE.

Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

ROYAL POLYTECHNIC GAS FIRE.

BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.



VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PLANING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cal net makers, railway carriage and waggon builders, machinists, agricultural implement makers, shipbuilders; and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 20, Lawton-street, Liverpool, from whom full particulars may be obtained.

NEW PATENT MACHINE for MORTISING and TENONING HARD and SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 20, Watling street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to the sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporising) with all the improvements, under their Quadruple patents of 1851-54 and 1855, including their Gunpowder Proof Soft Lock and Door (without which no safe is secure).

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47a, Moorgate street, City. Circulars free by post.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, and the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercantile Gas Regulator. Complete pattern-book and price list, free on application, High Holborn.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives superior tone and facility for practice

TO ARCHITECTS AND BUILDERS.

GEORGE PRICE'S PATENT FIRE-PROOF and THIEF-PROOF DOORS and FRAMES are the strongest, best, and cheapest in the trade. Size, 6 feet by 3 feet 6 inches, door 1 inch and a quarter, frame 5 inches by 3 the inch; strongly made and well finished, and fitted with patent unpickable and powder-proof lock, 12l.; the same, fire-proof, 16l.—CLEVELAND SAFE WORKS, Wolverhampton, London Depôt, 124, Fleet-street.

MANUFACTURER to Her Majesty's Government.—JOHN TANN'S new patent RELIANCE LOCK and FIREPROOF SAFES are the best and cheapest made in the world against fire and robbery. Testimonials to be had of Messrs. WATERLOW, Birchin-lane; and at the Works, 1, Honeystreet, Hackney-road, London. Iron Doors for strong rooms and party-walls.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. &c. 5d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

ESTABLISHED 1817.

WILLIAM HARMER'S SMITHS' WORK, STOVE and RANGE MANUFACTORY, and IRONMONGERY, METAL and ZINC WAREHOUSE, 19, Horseferry-road, and 1, New Peter-street, Westminster. — Contractors, Builders, &c. supplied with general Ironmongery at prices equal to all competition. Estimates given for any description of Wrought and Cast Iron Work

THOMAS EDINGTON, PURCHASER and INSPECTOR

CASTINGS on COMMISSION,

17, GORDON-STREET, Glasgow.

TO BUILDERS, MARBLE MASONS, AND OTHERS.

THE LIZARD SERPENTINE COMPANY have to announce to the public, that the Serpentine Chimney-pieces and other articles recently sold by Messrs. Scott, of London, were not the produce of any of the Quarries belonging to the LIZARD SERPENTINE COMPANY, which continues successfully to carry on its business in Slab and Manufactured Goods, in stone of very superior quality, and in great variety of colour, at the Factory, Polteseo, Lizard. Show-rooms, 20, Surrey-street, Strand.

HENRY COX, Manager, Polteseo, Lizard.
F. W. RUFFLE, Agent in London.

THE LONDON and PENZANCE SERPENTINE COMPANY have opened an extensive SHOW ROOM, at No. 2, Wellington-street North, Strand, for the sale of CHIMNEY PIECES, and other articles useful architectural, and ornamental for Builders, Architects, Builders and the trade generally, to inspect the same. A large assortment of fancy articles are also on sale at the Company's stand in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly attended to.

July 25, 1855. C. ADENEY, Secretary.

Lloyd's Marble Wharf, Hungerford-bridge, Strand.

ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A quantity of rough blocks now landed.

MARBLE.—The Italian Marble Company, Limited, beg to announce that their many quarries in the Statuary Marble Districts of Italy, so long and favourably known, are now in full work, and that they have on sale in the United Kingdom a large and valuable assortment of Statuary, Veined, Sicilian, Breccia, and Dove Marble blocks of all dimensions, delivered on board at Leghorn, or in dock, London. A complete stock is also kept at the Company's Stone Wharf, Pimlico, for the supply of Slabs, Sizes, Statuary, Veined, and Sicilian Marbles, Chimney-pieces, Tablets, Monuments, Tombs, Columns, Vases, Fountains, Garden and Table Statuary, &c. &c. executed and landed at moderate prices. For further particulars apply at the Offices of the Company, 13, Cannon-street, City.

WILLIAM W. BONNIN, London Secretary.

TO SCULPTORS, BUILDERS, MASONS, &c.

B. FABBRICOTTI respectfully invites the Gentlemen engaged with the Marble Trade to inspect his fresh STOCK, composed of Statuary, Vein, Sicilian, Black and gold, dove, Bardiglia, Siena, and Breccia, in blocks, and particularly calls their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.

Monuments, vases, and statues, finely executed in Italy.

Carrara Wharf, Thames-bank, Pimlico.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good Marble work. The Stock Consists of elegant Dining-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Brocatella, Sienna, Verd Antique, Breccia, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Warrington-bridge. Office: 24, High street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beecham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich

YORKSHIRE STONE.

GEO. VINT and BROTHERS, EDLE, near LEEDS,

Beg to inform Architects, Surveyors, Contractors, Builders and Masons, that they can supply to any extent all kinds of YORKSTONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Lidgett Hill, &c. of the very best quality, direct from the Quarries to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

LANCASTER STONE, so remarkable for its free working quality, combined with durability. Prices and list of thicknesses to any part, may be obtained, upon application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, lime, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, White fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE MERCHANTS, BATH.

List of prices at the quarries and Depôts, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

PIMLICO MARBLE WORKS,
BULGRAVE WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW PRICED CHIMNEY PIECES ARE WELL AND CHEERFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, Interior at the Crystal Palace, Sculptured by the Haytor Company under Real Claims. For terms apply to Mr. G. HOAR, Haytor Granite Office, 1, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—HEGELIES and TAYLOR, 8 Pinners-court, Old Broad-street. Manager, JAMES RAILTON.

This Granite is recommended for the New Westminster-bridge.

MARKET-WHARF, REGENT'S PARK-BASIN.—WEST and DRAKE, of Kentish Town Potter and Bone Merchants, Rape Cake, Seed Crushers, and Oil Refiners, Oil Cake Merchants, Lime Burners, and Lime and Cement Agents, beg to call the attention of Builders, Masons, and others, to their Stock of Bones, which they can recommend as the best for Drains, Gardens, &c. Prices and Analysis forwarded on application. Country orders promptly attended to.

FOR MACADAMIZING ROADS.—The HARDEST and most DURABLE STONE.—The Proprietor of an extensive Quarry at Penmaen-bach, Penrhyn, near Conway, is now contracting to supply any quantity of the above Stone, its stability having been tested, and proved to be 25 per cent. harder than Guernsey Granite.—For further particulars apply to Messrs. Mitchell, N. Wilson, No. 5 Swan's Buildings, Battle-bridge, London-road, Surrey-side. Two Coal Wagons for sale.

TO MARBLE MASONS AND PLASTERERS.

TWO STONE and MARBLE SAWING FRAMES FOR SALE, with saws, buckles, and driving gear complete. Also a Crane for shipping to JOHN FRANCIS, North Wharf-road, Paddington.

SLATING.—T. B. HANNAFORD is not only in a position (through having a large share in a Slate Quarry), to execute any amount of the above work at extremely low prices, but guarantees a first-class material, in all respects saleable and experimental hardness in the City.—Trevalyn Wharf, Ratcliff-cross.

PARIS EXHIBITION.—ENAMELLED SLATE TWO FIRST-CLASS MEDALS! Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1854. This beautiful material, handsome and more durable than marble, is now fashionable way into palaces, the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stores for all apartments; plain and exquisitely decorated slabs for tea-tops or hot-tables, dumb-waiters, trays, &c.; for bathrooms, washhand-tops, splashers, vases, pedestals, and brackets; also the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. PAPIER MACHE, COMPOSITION, CARTON PIERRE, AND CEMENT WORKS.

WHITE AND PARLBY

Beg respectfully to inform Architects, Builders, and Decorators, that they are prepared to execute in the above materials, all internal or external decorations, at exceedingly moderate prices. They would call attention to their varied ENRICHMENTS of the richest class, and in every style of ornament, as suitable for the above purposes, comprising Ceiling, Panel, and Pilaster Decorations; enriched Friezes, Trusses, Ornamental Cornices, Trusses, Caps, and every other requisite for the decoration (either simple or elaborate) of all classes of Public or Private Buildings; also to their Stock of Glass Domes, Pier and Console Tables, Girandoles, Window Cornices, Curtains, and other Articles of DECORATIVE FURNITURE for GILDING, of which they have an extensive assortment executed in the most approved style. They also invite attention to their Designs for DECORATIVE SHOW-CASES, and other ornamental Shop Fittings.

SPECIAL DESIGNS MADE FREE OF EXTRA CHARGE.

CEILING FLOWERS in great variety, ready for immediate use, always on hand, at prices lower than any hitherto offered.

ARCHITECTS' DESIGNS CAREFULLY EXECUTED, AND ORNAMENTS EXPRESSLY MODELLED (IF REQUIRED).

WHITE AND PARLBY, 4, RATHBONE-PLACE, LONDON.

THE GRAMMAR OF ORNAMENT,

By OWEN JONES.

BEING A SERIES OF THREE THOUSAND EXAMPLES, FROM VARIOUS STYLES, EXHIBITING THE FUNDAMENTAL PRINCIPLES WHICH APPEAR TO REIGN IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.

ONE HUNDRED IMPERIAL FOLIO PLATES.

DRAWN ON STONE BY F. BEDFORD. PRINTED IN COLOURS BY DAY AND SON.

To be published in Twenty-five Numbers of Four Plates each, price 10s. The First Number will appear on the First of February, and the subsequent Numbers be continued Fortnightly.—The Work when complete will consist of

The Author will endeavour in these several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles and those which are peculiar to each. He will further attempt in the 24th chapter to show how, bearing in mind those general laws which he holds also to pervade the works of nature, and returning to her for fresh inspiration, we may yet go forward; and, whilst avoiding ourselves of the experience of all time, may be enabled to produce works in harmony with our own times instead of blindly following in the footsteps of the past.

The chief part of the cost and amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless that with this colleagues, artists, and all others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

*** *Intending Subscribers are requested to forward their Names immediately.*

In Two Volumes, 8vo. with nearly 1,600 Woodcuts, price 60s.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES, AND MINES:

CONTAINING A CLEAR EXPOSITION OF THEIR PRINCIPLES AND PRACTICE.

The Fourth Edition, much enlarged and corrected throughout.

"To write volumes of Dr. Ure's consist chiefly of original and exact treatises, written with so much accuracy and care that they may be unreservedly resorted to as authority, as indeed the former editions have been by artists and manufacturers. And this quality forcibly presents itself to several writers. The author has throughout the entire work kept most seriously before his mind the one object of promoting the best and most economical developments of the arts and manufactures, and has produced a work which altogether surpasses every other of its kind, with which we are acquainted." *Mechanics' Magazine.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

PROFESSOR THOMSON'S ALGEBRA.

A New Edition in 12mo price 5s: Key, 4s. 6d.

AN ELEMENTARY TREATISE on ALGEBRA, Theoretical and Practical.

By D. THOMSON, LL.D. late Professor of Mathematics in the University of Glasgow.

"We recommend it to mathematical readers, teachers, and students, as containing a very good elementary treatise and the most comprehensive text book of the science."—*Atlas*

London: LONGMAN, BROWN, GREEN, and LONGMANS

NEW AND CHEAPER EDITION.

The Third Edition, in 8vo. price Two Guineas

GWILT'S ENCYCLOPÆDIA of ARCHITECTURE: Historical, Theoretical, and Practical. Illustrated with more than 1,600 Engravings on Wood by R. Branston, from Drawings by J. S. Gwilt. With a Supplement on Gothic Architecture.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

PESCHEL'S WORK ON NATURAL PHILOSOPHY.

In Three Volumes, fcp. 8vo. with Wood-cuts, price 21s.

ELEMENTS of PHYSICS.

By C. F. PESCHEL, Principal of the Royal Military College, Dresden.

Translated from the German, with Notes, by E. WEST.

Vol. I. contains The Physics of Ponderable Bodies 7s. 6d.

Vols. II. and III. Imponderable Bodies, price 13s. 6d.

"We trace the hand of a master, who has placed before his readers, in the most lucid order, those branches of science in their modern improved state. The work is a little encyclopædia of physical science, and we heartily recommend it as a work by which the public will benefit." *Philosophical Magazine*

The Builder.

VOL. XIV.—No. 677.

UTILITARIANISM in Architecture was the subject of the paper read by the Rev. J. L. Petit, on the 22nd instant, at the Architectural Exhibition in Suffolk-street. The object the lecturer had in view was to inculcate, almost as if in denial of a doctrine put prominently forward by Mr. Fergusson, in his ably-written and profusely illustrated "Handbook" (of which we shall speak more at length shortly), the necessity on the part of architects of acquiring knowledge, and making the most, of the materials obtainable, of attending to the purposes of the building they had to design, and of acquiring and carrying out sound principles of construction, by which means they would ensure a certain degree of excellence, and ultimately attain much more. Explaining why to some extent the amateur had advantages and facilities in meddling with established rules or popular opinions over the practitioner, who might thereby jeopardize his position, he would seek indulgence by avoiding dogmatism.

Architecture has, beyond the mere object of providing us with shelter and personal comforts, a further and higher purpose,—the development and exercise of certain noble faculties of the mind, both in the spectator and designer,—and much which would otherwise have been considered superfluous, becomes essential, and its uses must be recognised by us, even if we should regard usefulness as the only test of merit. In short, he maintained, attention to appearances was no more superfluous in the structures built for our use than in the clothes we wear, or in the habits and actions of our lives. To what extent we might with propriety bestow cost and thought upon the appearance of a building, beyond what was necessary to fit it for its professed and primary purposes, he thought it would be hard to say: he believed, indeed, that there was no limit. He said this, and gave some instances, that he might not be misunderstood in what would follow. But his real business on the present occasion was rather with architects than with their employers: and we will now allow the lecturer to speak in his own words, with only such omissions as our limits enforce.

It appears to me, he said, that architects must be, and that good architects always have been, guided by utilitarian views. They have no right to overlook, or compromise in the smallest degree, the original purposes of the buildings they have undertaken, for the sake of ornament, be it of the highest order. You will observe we have been talking of superfluities, not substitutions; of something beyond what was strictly necessary, not of something offered instead of it. In the noble churches to which we have referred, the parts necessary for the performance of religious rites were always the first care of the architect: the choir was generally first completed and consecrated, then the remainder of the body of the church, and last of all the towers and the enrichment of the fronts. These were added, not substituted for anything: nobody would have thought of designing an inconvenient plan for the sake of the grandeur or richness of which it was capable.

There are good reasons why we should rather make the best of our old churches, than materially alter them, or destroy them, to build others in their room: the impression they are calculated to produce more than compensates for some inconvenience in their form or arrangement; but there seems no reason why we should ever plan or build a new church of an inconvenient form, or in any way unsuited to our own manner of worship. If, for instance, it is desirable that all the congregation should be within sight and hearing of the minister, why should a church ever be built in which a part of the congregation is hidden from him when he performs any part of the service in the usual place? And this must be the case in every church having aisles which terminate at the division between the nave and chancel. If we find that galleries are useful and convenient, why should we build churches that will not bear galleries, or to which they are a disfigurement? If we professedly adopt high-pitched roofs as suitable to our climate, why should we ever combine them in such a manner as to leave a lodgment for snow or rain? There may be difference of opinion as to the advantage of an unbroken area, or the expediency of galleries; still they serve my purpose in illustrating the proposition I would advance, which is, that an architect ought not to abandon a convenient arrangement on account of its ugliness, but rather try to get rid of the ugliness without giving up the convenience.

If, then, a feeling that his first object is to make his building fully answer its primary purpose, and a determination that nothing shall be allowed to interfere with this object, be referable to a spirit of utilitarianism, I conceive that so far, at least, an architect ought to be a utilitarian. It is far from the highest element of his art, but still it is a very important and indispensable one.

But I will go farther, and express my conviction that utilitarianism, even in its very lowest sense, that which leads us to study how to satisfy the conditions required at the least possible cost, is not to be altogether discarded by the architect. I do not mean that a parsimonious spirit should be encouraged in his employers, far from it; nor that he should pander to such a spirit (as I have occasionally been accused of doing when I have made remarks similar to those I am now offering, and which ought not to have been so misunderstood); but that he should learn how best to meet the exigencies of persons who, whether from their limited circumstances, or from a feeling as to the right apportionment of their expenses, cannot afford to lay out anything on superfluities. We know that a great number of churches, schools, hospitals, and other buildings for pious and benevolent purposes, have been, and are still being erected by the voluntary contributions of private individuals; and it is but fair to suppose that many of the contributors give fully as much as can reasonably be claimed from them; as much as they are justified in giving, and some whose resources are seriously injured by it. Who has not seen applications, the formula of which might be stereotyped, to the effect that in such or such a parish it has been found necessary to meet the wants of the increased population by erecting a new church or school; that on, or perhaps before its completion, a heavy debt was found to have been incurred, for which some individual of limited means, generally the clergyman, was responsible, and that therefore an appeal was made to the liberality of the public. Now surely, in some instances, much of this embarrassment might have been obviated by an architect who had studied economy, both in his designs, and his manner of carrying them out. By doing this, he is not countenancing those who have given less than they ought, and who, whatever be the ultimate cost, have risked nothing beyond their contribution; but he is showing his consideration for those who have given amply according to their means, and risked more than they have given; and therefore I still hold that the problem, how to build a cheap church, is one that ought to be mastered; and I verily believe its solution would tend to raise, instead of lowering, the standard of church-building. For the problem is not to be solved by bad work, base ornament, insufficient construction, or perishable material. The building must have dignity, durability, convenience, and an appearance suitable to its high destination. The architect who devotes his thought to the production of this at the least possible expense, will, I conceive, advance and ennoble, instead of debasing his art; for, to go no further, his being cut off from expensive ornament will throw him more directly upon the resources of form, composition, proportion, and arrangement. All that is said in "The Lamp of Sacrifice," on the use of costly material and elaborate workmanship, is excellent; but it is applicable rather to the employer who pays for the building, than to the architect, who designs and constructs it. The offering of the latter is his thought, his time, and his care. And this may be a sacrifice of great value, and one that costs him much. For he may have to give up much popular applause; to work under much discouragement; to be content with the approbation, and that not unmixed, of the few who can appreciate real excellence; and to give up the admiration of the many who are attracted by show. He may have to work in brick, when he sees his competitors working in marble; still he may ultimately find that he has laid the groundwork of a reputation independent of the costliness of the materials of which he has the disposal.

We are now prepared for the consideration, whether usefulness and economy may not only be consistent with artistic excellence, but actually tend to the development of much that is grand and beautiful. If picturesqueness is a merit, I can answer for it that the most picturesque objects I have seen are buildings of the most strictly utilitarian character, without a speck of ornament, and you may be sure erected at no more cost than was deemed necessary, without the slightest attention whatever to appearance. I speak of the furnaces in the neighbourhood of Wolverhampton. Some of these, taken as buildings, independently of their accompaniments of fire and smoke, are absolutely grand. There is something, too, very impressive, to my mind, in the lines of modern fortification; but I suspect their designers never thought of producing any impression, except through the medium of shot and shell.

Should you, however, dispute the grandeur and picturesqueness of the objects I have instanced, you will hardly deny these qualities to the mediæval castles of Europe. Part of the charm may be owing to their state of decay, and yet those that are most perfect are not the most devoid of grandeur and picturesqueness: they are neither the least impressive to the spectator nor the least attractive subjects to the artist.

I will not attempt to enter into a definition of picturesqueness, or to criticise any that has been offered; but it is certain that a studied picturesqueness, if not wholly valueless, is incomparably of less value than that which is inartificial; unless, indeed, the art is too subtle and refined to make itself prominent, which can only be when the picturesque outline or arrangement appears to come naturally, or to rest upon utilitarian grounds. We are not equally bound to conceal the art by which beauty, sublimity, and solemnity are attained: on the contrary, any evidence that care and thought have been bestowed upon their attainment increases the charm; and this is more displayed by a connection and adaptation of the means of producing effect to the primary purpose of the building than by keeping the latter out of sight. If, for the sake of making a church beautiful, we make it inconvenient, or unsuitable to its purpose, what is it but to confess that we cannot make such a church as we want beautiful,—a confession which an architect ought to be ashamed of making.

I have never entered at all into the arithmetical and geometrical rules which have been asserted to govern architectural proportions;—not that I think the investigation is a loss of time; for it is very probable, I may say certain, that such rules have been laid down, with a view of securing a pleasing proportion, and of preserving something like uniformity among buildings of the same class: but I can see no clear data on which they could have been founded. If, upon the strength or stress of materials (the most legitimate basis), the actual size is a most important element, for strength does not increase in the same ratio as size: a beam of 40 feet length and 6 feet square, is not so strong (in supporting its own weight either where projecting from a wall, or resting upon a column at each end) as one 20 feet long and 3 feet square; simply because the weight increases according to the third power, and strength according to the second. Of course

I assume the material to be uniform throughout, and the same in both cases.

But if we take the human form as a basis, the result may prove different. I will try and explain my meaning by considering the aperture of a door. Now, if this be so formed that, in passing through it, the crown of the head is at the same distance from the lintel that the shoulders are from each of the posts, the proportion, under certain limits of size, cannot be very wrong. You will find that a doorway in the form of a double square, to admit an ordinary person in such manner, namely, that he shall be at an equal distance from the lintel and the side posts, ought to be about 6 feet 8 inches in height, and the half of that in width; and a door of that size and proportion will not, I think, look amiss. If the door is smaller, it must be narrower in proportion to its height; if larger, it must be wider; but in this direction it is clear we soon come to a limit, since too wide a door is both ugly and inconvenient. I am not laying down a rule for the size and shape of doorways, but merely suggesting how certain proportions may be deduced from the human figure, and how materially they are influenced by actual scale.

I much question whether there are any actual proportions, say, for instance, between the sides of a rectangular figure, positively and abstractedly more pleasing to the eye than others. I suspect any preference is traceable to some association, whether of habit or propriety in certain conditions. We require them to be different in different positions, or, as we have seen, where there is a change of scale. The same shaped archway will not serve for door, window, pier arch, and vaulting arch: the form that pleases in one offends us in the other. From which I infer that positive usefulness is very likely to prove the true groundwork of fine proportion. We have seen that actual scale is a very important element in proportion; and therefore the architectural draughtsman will find the advantage of being able so to sketch a building as to give a fair idea of its actual size. I know very well, that drawing for effect is discountenanced by some, as having nothing to do with architecture, and it is used unfairly by others. Yet it is as necessary to know the effect of a building, as the means by which the effect is produced. Plans and geometrical drawings give the means: a sketch shows the result. If I can look at St. Paul's every day, I do not want a sketch of it: plans, sections, and elevations will serve my purpose: I am well familiar with the result, and know how I am impressed with it: what I want to study is, how that effect is obtained. But if I have never seen St. Peter's, I must have something more: I want not only to see how the architect worked, but how he succeeded in his task; whether the impressiveness of the result was worth the pains and cost bestowed upon it; and this I cannot get without sketches or pictures that give the form to the eye as presented by perspective, and convey a true notion of the size; I mean, as accurate a notion as the sight of the building itself, from the point of view chosen, would give. Photography may possibly be brought to do this; and if it be, the value of architectural photographs, already so considerable, will be much increased.

None but a great man could have designed the dome of St. Peter's; and an architectural student cannot employ his time better than by carefully examining the proportions of fine buildings; and if there is any principle by which they are fixed, endeavouring to investigate and apply it.

The Cathedral of Worms has always struck me as being remarkably fine in its proportions. And here the towers and cupolas, though grand in themselves, are no more than sufficient to give life and variety to the outline: they do not predominate, like the towers and steeples of an English cathedral. The general effect is that of a large oblong building, with a turret at each angle. * * * The height of the vaulting, if I do not mistake, differs little from the interior width of the nave and aisles inclusive: this, you know, is a common proportion in cathedrals. The large Romanesque churches in Germany are generally, I think, of better proportion than those of later date, which are apt to be very short in the nave. Limburgh Cathedral has a nave of only two squares, independent of its aisles and western towers; and its whole proportions are so lofty, that it has the character almost of a huge tower, built for defence: this, however, well suits its position, on the summit of a precipitous rock. Our large English churches of the Norman style, are of very good proportion, where the plan is undisturbed. Tewkesbury is an example. The same may be said of Normandy, and, indeed, most of France. The general outline of St. George, Bocherville, is most satisfactory. The Early Pointed Abbey Church of Fecamp does not differ very materially in proportion from the older churches. I have elsewhere mentioned the churches of Anjou, and among them the ruined church of Doué, near Saumur, the plan of which strikes me as peculiarly fine. The nave has three squares, the tower, chancel, and transepts, each one square, the chancel and transepts having eastern apses or chapels. There are no aisles. The cathedral at Poitiers has a very simple, unbroken outline: it is well worth studying. And I need not remind you of Salisbury as a specimen of the most exquisite proportion in our Early English.

In pointing out these examples as worthy of admiration and study, I am not recommending the indiscriminate adoption of their plans for our own use. They were excellent for the purposes for which they were designed; but others may be more suitable for our services. There is hardly a church by Sir Christopher Wren that does not exhibit a true feeling for proportion, as well as a strict attention to all the requisite conditions of a church. St. James's, the church on Ludgate-hill, St. Benet's, Paul's-wharf (which has lately been pointed out to me as a masterpiece in its way), furnish us with models of undoubted excellence, and they all owe their merit to composition rather than ornament.

Construction will often furnish us with good principles of composition. A building that appears to be well constructed, to have all its masses properly supported, with enough preponderance of strength to ensure perfect stability, and the different supports proportioned to the work they have to do,—such a building must require a great amount of bad ornament to make it look ugly and unpleasing. There must of course be some superfluities in the supports, but these should be well proportioned to each other. For instance, each pier in the nave of a cathedral should be more than sufficient for the weight which depends on it, but not so large as those under the central tower. There are some cases where the central piers are scarcely, if at all, more massive than the others, as in the Cathedral of Autun, but this arrangement is not pleasing, for if the piers which bear the greatest weight or strain appear perfectly secure, there cannot but seem to be a waste of strength and material in the others. Yet the central piers ought not to be so large and heavy as to suggest the idea that the tower is supported by them without the aid of abutment. A church with a central tower or dome is pleasing, because it manifestly carries out that system of construction by which large spaces are roofed or arched over. The building itself forms its own abutments, and does not require an additional expense of material for the support of the great weight which rests upon it. A large central tower is sustained by the actual walls of the nave, choir, and transepts. It wants no further piers or buttresses (of course I speak of a church without aisles). If the cross form is in itself convenient, which it is in many respects, then the central tower over the intersection, if properly treated, need not render it otherwise. It pleases us both by the mechanical skill it displays and by the actual beauty of outline which it gives the structure.

But if the tower rests upon a substructure which is sufficient for its support independently of abutments, as though the tower itself were first built and rendered secure, and afterwards the limbs of the building added to it; then, in the first place, we lose the charm produced by a contemplation of mechanical skill, and next, we choke up our area at the very point where convenience demands that it should be most open and unbroken. This was often done in old churches, in which the form of service did not require wide unbroken areas; but it should never be done in modern churches intended for the English Established service. Where there are aisles there must of course be tower piers, but these may be made to project but little into the principal area. In some of our abbey-churches they do not project beyond the other piers into the central passage of the church, though by contracting the arches from the aisle into the transept, and also of the transept itself, they are made to preserve their proper preponderance: shafts resting on corbels, or brackets, support the inner orders of the transverse arch.

A display of mechanical skill gives us pleasure, if exerted on a worthy object; but we are not, or ought not to be, pleased by an unnecessary exhibition of ingenuity or contrivance. The architect who has surmounted a real difficulty that he could not avoid, or that lay in the way of some grand result worth obtaining, as the bridging or roofing over a vast space, or the construction of a lofty tower, has a right to make the most of it; to show or to conceal his construction according to the impression he wishes to produce on the spectator, provided always he takes care to satisfy him that his work is well and securely done. He may indulge either in excessive intricacy and apparent confusion, as in the rich steeples of Belgium, or affect a severe simplicity, as in the beautiful campaniles of Italy: he may hide or expose his means of dealing with the difficulty, whichever course he may think best calculated to enhance the triumph of his art.

But he must not exercise needlessly his power of contrivance: he must not create difficulties for the purpose of showing how he can surmount them. I am not clear that I think the roof of Henry the Seventh's Chapel quite worth all the mechanical ingenuity and contrivance bestowed upon it. Possibly a roof of a more ordinary construction would have given equal solemnity, beauty, and richness. But I will notice an example which is the more curious, as belonging to an age little given to architectural tricks (the twelfth century).

Among the abbey buildings at Fontevrault is a small chapel (if it be one, for I don't know whether its purpose has been ascertained), having eight sides, and a corresponding number of apsidal projections. Now you would naturally suppose that these projections would be attached to the sides; each side having its own arch and apse. Such a form would be simple in construction, elegant, calculated for stability, and, apparently, would fulfil any conditions of convenience likely to be required. Instead, however, of this, the apses correspond with the angles, and you may conceive that not a little contrivance and intricacy of arrangement is necessary to carry out the plan. The effect of the interior is remarkable, and not altogether unpleasing; yet when I saw it, I could not for the life of me make out what was the object of all this ingenuity.*

We will now take an instance of ingenious contrivance, for which we can find out a reason, and therefore we may admire it honestly. I mean the steeple of Antwerp Cathedral. The principal peculiarity in its construction is, that an octagonal stage stands upon a square base, not in the usual manner, having four of its sides corresponding with the sides, and the other four with the angles, so as to rest upon ordinary pendentives, but having an angle corresponding with the centre of each face, and with each angle, of the square tower. It will be necessary, when you go up the steeple, to ask for the key of the room in which the junction between the square tower and its octagonal superstructure is shown; and the construction is well worth notice. The chief feature is a system of four arches thrown across between the centres of the adjacent sides, thus forming a square compartment, set diagonally within the tower; their depth being sufficient to carry a considerable part of the face of the octagon placed upon it obliquely.

Now this is not a mere caprice. The lower

* This chapel is not often shown to visitors, the abbey being used as a prison: even the nave of the church is divided by floors, and converted into dormitories (the principle of utilitarianism is here, I admit, carried rather too far), and a written permission is required to enable you merely to see the choir and transepts, which are left open, and contain the tombs of the English kings, Henry II. and Richard I.

portion of the tower is in each face divided in two equal parts by a buttress, each having its window; and by the arrangement of the octagon its windows correspond with those below, the front presenting the two tower windows in the upper stage of the square portion, and two of the octagon windows almost immediately above them; thus carrying up the vertical lines, and giving a great effect of height.

In Strasburg the octagon is set in the usual manner; so that in looking at the steeple from a cardinal point, we have one window in its full width, and two (one on each side) narrowed by perspective. And this character is carried down into the square part of the tower by making a large central window, flanked by two actually smaller ones—an ingenious contrivance, which shows how much the architect studied the effect of his design. But a tower so divided seldom has the grandeur of one divided into equal compartments by vertical lines, and having windows or openings equal in width, in the same face and the same stage. This is usually the case with large towers: there are exceptions, like this of Strasburg, but they are comparatively few in number. The unequal division is apt to give a certain apparent weakness, or a partial and arbitrary distribution of strength, inconsistent with that perfect stability which ought to characterise such a fabric as a large tower.

It is not absolutely necessary that ornament should be either costly in material, or elaborate in workmanship. The use of brick, for architectural works of the highest order, is now generally recognised. Since our architects have made themselves well acquainted with the noble specimens of brickwork on the Continent, as throughout Holland, in many parts of France, in Lombardy, and much of Italy, they have ceased to regard brick as merely a poor substitute for stone. It has two great merits which do not belong to many other factitious materials. One is, that it is no imitation; it does not profess to be stone, or anything else but what it really is; and the other is, its durability, which has now borne the test of many ages. If we are building in brick, we may freely avail ourselves of all the modes of decoration which can be adopted in brickwork, whether plain or moulded. Considerable grandeur and even richness may be produced by deep and bold cornices, and a judicious use of string courses; and so long as they are executed in solid durable material, and there is no attempt to make them appear different from what they really are, no reasonable objection can be urged against them; nor need any unnecessary amount of manual labour be bestowed upon them.

By the way I would venture a passing remark upon string courses: a broad flat band with square edges, such as is most frequently used in plain domestic architecture, hardly ever has a satisfactory look. Now, neither breadth nor squareness is a fault in a building. It strikes me that the real defect is, the similarity of the upper and under surfaces. These surfaces perform different functions, and therefore ought to be differently treated.

I noticed the other day one of these bands, the upper surface of which was covered with a piece of lead, projecting sufficiently to throw off the rain. This, altogether, corrected the fault.

The lecturer then proceeded to speak of the treatment of sculpture in architectural works, and at this point we will return to his discourse in a future number.

SHARPENED EDGE TOOLS. — We take the following from a German scientific journal for the benefit of our mechanics and agricultural labourers: "It has long been known that the simplest method of sharpening a razor is to put it for half an hour in water to which has been added one-twentieth of its weight of muriatic or sulphuric acid, then lightly wipe it off, and after a few hours set it on a hone. The acid here supplies the place of a whetstone, by corroding the whole surface uniformly, so that nothing further but a smooth polish is necessary. The process never injures good blades, while badly hardened ones are frequently improved by it, although the cause of such improvement remains unexplained."

ON COLOUR AND ITS USE IN ARCHITECTURAL ART.*

LET me return more within the scope of the subject I have chosen. Depend upon it, the philosophy of art will not deteriorate the workman. Be it our aim to combine practice with theory. In speaking but now of the neutral tones of colour, the special note of which appeared to me to be a "variable monotony," an evenness of tone composed of two or more elements, I instanced the morning and evening mists, which, though cold and dull in their first aspect, are in truth possessed of very luminous qualities. They are not unlike in that respect the nebulous matter of which astronomers speak. They are seldom represented in painting by purely cold colours: they require that intermixture which commonly goes by the name of warm grey, frequently employed by Claude, &c.

Let me now show how this same principle may be applied to architectural works. Not only do we perceive in these the close connection of colour with light and shade, and of both with form, but the intermixture of one kind of tone or hue with another may be fairly exemplified.

Pugin, in one of his most popular works on the Pointed, or, as he termed it, Christian style of architecture, thus speaks of an important point in structure:—"Another most important, but now neglected part of masonry, is," he observes, "the jointing of the stones. All bond and solidity is frequently sacrificed to what is called a neat joint, by setting one stone on end to form a jam, when the same space in good old constructions would have been occupied by five or six stones tailing into the wall, and lying in their natural bed, a point which should be much attended to. Or, if the jambs are built in courses, they are made as uniform as possible, like rustics: by this means the effect of the window is spoiled, the eye, owing to the regularity of the work, is carried from the jamb to them; while in the good old masonry the irregular outline of the stones does not interfere with the mouldings of the windows. Another point to be remarked in the old masonry is the smallness of the stones employed. Now, independently of this being the strongest mode of construction, it adds considerably to the effect of the building, by increasing its apparent scale. Large stones destroy proportion, and to illustrate this I have given two representations of the same piece of architecture differently jointed. Not only are the stones used in ancient buildings exceedingly small, but they are also very irregular in size, and for the same reason I have before mentioned, that the jointing might not appear a regular feature, and by its lines destroy those of the building."

All this is very true, but it appears to me strange, I own, that in addition to these arguments, the distinguished author from whom I have quoted did not also make some allusion to the colour of ancient buildings as one prime source of their beauty. An old edifice composed of numerous small stones offers to the rays of light a rugged surface upon which the lichens and fern gather, presenting to the eye the most agreeable and harmonious tints. A modern building, on the contrary (especially if the Greek or Classic style be adopted), with its large square blocks of stone, gives us nothing but a flat surface with a colour (comparatively speaking) dull and monotonous. I was much struck with these truths lately on a visit to Rochester Cathedral where the tower and the eastern transept (Rochester has a double transept) were "restored," as I suppose we must call it, under Cottingham, in the year 1825. This happened but a few years before what we may fairly call the revival of religious art in this country began. Now the bulk of the cathedral of Rochester is in flint-work of Norman date, but the architect, I presume, convinced that he knew better than our ancestors, determined not to be behind with them in practical skill. Therefore he determined to build in stone squared, and with a highly-worked surface. The effect, as might be expected, is the worst possible, and the rude grandeur of the old Norman work is lost. Instead of that beautiful grey which old Norman work offers to the eye, we have a flat drab surface of smooth stones with neat jointings,—a surface which, instead of reminding us of York or Lincoln Minster, brings back to our minds the painted surfaces of Buckingham Palace and Belgravia.

Of all hideous surfaces to buildings (and there are many degrees of hideousness), none, I think, is worse than a cemented house painted drab. The fashion, I am sorry to add, is becoming more and more in vogue. It is a sad business that while our neighbours, the French, are building a city of cut stone palaces on the banks of the Seine, we are building a city of stucco houses (in most cases, I fear, very badly constructed) on the banks of the Thames. A few attempts at better things are to be seen; but alas! the long lines of suburban residences, manufactured rather than built, and the two vast towns of Tyburnia and Belgravia, prove how difficult, if not vain is the task of those noble-hearted few, the real architects of the day, who, by recalling to us ancient models, would stem if possible the tide of corrupt taste which has infected our commercial and utilitarian age.

Again, let me ask, why does old brickwork look better than new, in point of colour? Is it not in great measure because the pointing is worn out, and the surfaces of the bricks are unequal? Nothing can be finer in colour than the old Roman brickwork about the Forum, as seen in the baths of Dioclesian, and other places: the lichens collected on the rugged surface exhibit in perfection the variable tints it affords. Further to illustrate the same principle, some, perhaps, will remember that almost all the early masters who painted on canvas used a very rough surface, the granulation of which presents an agreeable effect to the eye. The same thing may be remarked of fresco, the beautiful tones of which are in a great measure due to the plastering on which it is executed being rough cast. Again, our water-colour masters use a rough cartridge paper for the same purpose, with excellent effect. All who remember the exquisitely natural sketches of Dewint, or the masterly works of Cattermole, can testify to this. Not, indeed, that a rough surface has anything magical about itself. It may rather be considered as a mechanical contrivance to save labour. Real beauty of colour consists not in roughness or smoothness of surface, but in that variety and changefulness of hue (not incompatible, indeed, with an even tone), which is characteristic of natural objects. Now, this may be obtained (in colouring), by the use of a material presenting sundry small inequalities, but in a higher degree, by the use of the brush in painting, and of the chisel in sculpture. The laborious process called "stippling," so well known to the painter of miniatures, has this object in view. Each touch thus put upon the paper or the canvass, has an individuality about it, which adds much to the total result obtained. All these contrivances, therefore, of rough paper, or rough canvass, are really inferior to what has been well called *durus linæ* labour, the hard toil of the finishing touches. This is that persevering, earnest love of the work for the work's sake, which gave such refinement and value to the works of our predecessors. Observe, then the bounty of Providence. It is the human hand and eye alone which can gain this exquisite perfection. In these days, when marvels are performed by machinery, in how many cases is it our lot to regret the real superiority of the old fashioned hand-made article. Above all, in point of colour, is this superiority noticeable? In it each touch has its peculiar value and significance. Why is a Cashmere shawl superior to an imitation? because, I apprehend, mechanical contrivance enters more largely into the latter than the former. The same principle, I believe, will account for the great superiority of the Oriental colouring, so much remarked upon both in the French and English Exhibitions. There is no machine so delicate as human fingers.

I hope I am not misunderstood. I do not undervalue the blessings of machinery, but I wish to point out the bounty of the Divine Governor of all things, who appears to have intended, that exactly in proportion as machinery comes into general use,—as we find ourselves

* Read by Sir Walter James, at Architectural Mus um See *ante*, p. 1.

obliged to resort to mechanical contrivance to satisfy our multiplying wants,—ought the value of human skilled labour to be better appreciated. While society continues in a healthy state it will be so. There are subordinate parts even in works of art, which may well be performed by machinery. The highest offices will always be performed by the hand, because it alone of all machines is at all moments under the presiding influence of an intelligent soul.

May I be permitted to illustrate my meaning? No mechanical contrivance was ever of more real and lasting benefit to mankind than the art of the printer and engraver, by which we are able to multiply the productions of the greatest minds. A fine engraver is second only to a first-rate artist. Many a man may say,—I cannot be the possessor of a work by Rembrandt, but I may have one of his etchings. A Raffaelle, few private persons may hope to purchase, but a fine engraving is within the reach of many. Thus it is that copper-plate engraving gives an admirable transcript of the works of the great masters—at least it does so in their light and shadow and outline. Colour alone is of that exquisite nature which appears to be beyond the reach of mechanism. Who ever beheld a coloured print that was other than a lamentable failure? And that, I apprehend, simply because of those exquisite and subtle variations which constitute fine colour. Why does the pictured mosaic or rich tapestry please the eye? Simply because, being the result of manual skill, they afford those infinite gradations of tone which mere mechanism cannot reach. It is a curious thing, that while a coloured print is almost always quite worthless, the tone of a valuable old engraving is precisely that part of it which the accomplished connoisseur most prizes. Our best photographers say that they can imitate any part of a valuable print except its tone of colour.

I shall be excused if I mention that these remarks appear to me satisfactorily to explain the immense superiority of old line engravings to those dishonest and flimsy methods of imitation which are so much in vogue. Line engraving may be numbered, I fear, amongst arts almost extinct in this country. I commend the subject to public care and sympathy, and trust that in that revival of the arts which it is the duty of the true architect to promote, the service which the engraver has in former times rendered to the architect will never be forgotten.

Next, perhaps, to the sedulous labour of the human head and hand, there is no finer colourist than old Time,—"Time's effacing fingers where the power of beauty lingers." Let me ask my present readers whether they are not conscious of something extremely grand in the elevation even of a London building darkened by the smoke of centuries. It is a practical question I would wish to put to them,—whether we really gain much by scraping the stonework of former times. Happily, St. Paul's, the greatest work of Wren, has escaped. Will any unprejudiced man assert that if we could scrape St. Paul's, and give it that peculiar air of freshness which always accompanies a stone building when new, we should improve its beauty. A few years would destroy, as far as cleanliness goes, all we had done, but would a few years restore that venerable look which greets us from those darkened arcades which surround the glorious dome.

An instance presents itself to my mind in the fine old Norman doorway of the Temple Church, which had an imposing appearance from an accumulation of dust and weather stains upon it: these are now lost. Another example is that of the doorway of the western front of Rochester Cathedral. The stonework here has not, I apprehend, been touched since it was first put up. Let us be thankful that in spite of the zeal of hostile fanatics and false friends we have still many such examples.

In the beginning of the seventeenth century, which may perhaps be considered the period when a debased classical style was most prevalent in Europe, the old Gothic carvings were cut away, a barbarous classic architecture was substituted (and patronized, let me observe, by no class more extensively than by the Jesuit order), and men did not hesitate to talk and speak of modernizing and adapting Gothic. Even Wren, great man as he was, caught the general infection; for while he did not hesitate frequently to apply the spire, a decided feature of our northern Gothic, to Italian buildings, he made it often columnar in its outlines, as in the singular design, lately restored after a fire, of the church of St. John, in the parish of Limehouse. Alter Gothic architecture, and modernize or adapt it, was then the watchword. A century almost passed away before men grew wiser. Great as Wren was, Englishmen felt that they might be excused for thinking that William of Wykeham was in his way quite as great, and Frenchmen for believing that the Sainte Chapelle of St. Louis was a specimen of constructive ability not surpassed by the Madeleine. With a revival of religion, and of "peace amongst men," grew up a love of those old cathedrals in which our forefathers had worshipped. Modernize them! Oh, no! That was no longer the cry. Let us rather restore. And then, in the excess of our honest zeal we had the times when one of the best specimens of Norman architecture—the western tower of Canterbury, was destroyed and built up again at vast expense, in order to make way for a mere copy of its right-hand neighbour. A notion gained ground that we must make all things neat and uniform, even at the expense of historical truth, right feeling, and picturesque effect. We have come to the third, let us hope the wisest of our courses. We no longer talk of modernising or altering, and of restoration only in a whisper, for we should approach those venerable shrines with all those feelings we have for the weaknesses of a parent, with the strong conviction that the mediæval architects, with many roughnesses and failings, were on the whole far stronger and better builders than we are. Our watchword is, neither modernize nor restore, but preserve them. Take them as they are, with many faults of original construction, with many damages inflicted by the ruthless hand of time, and still more ruthless spirit of destructiveness. Still they have their pristine beauty of form, still their noble varieties of light and shadow, still those harmonious tints of colour are upon them, which are unto them as the hoary head is to the sage, one of the surest means of attracting public respect and admiration.

Let me endeavour to make a summary of the principles enunciated in this lecture,—

1st. To produce full beauty of colour, we must have large neutral masses varying in size and form, and arranged according to the principles of light and shade as understood by the painter.

2ndly. By a broad neutral mass of colour, it is not meant that it should be absolutely even in tone; but that while uniform in its general aspect, it should admit within certain limits of gradations and varieties. Such are weather-stains on buildings and old brickwork, which add to their effect exactly upon the same principle as fine chiselled work or delicate stippling improves the work of the sculptor or painter.

Here the proper subject of my lecture is at an end. A recent visit to the Exposition at Paris has induced me to put down, but in the same rough way I have hitherto adopted, the extent to which I think these principles may be exemplified by what is there seen. The building itself does not present the same magnificent *coup d'œil*, as our own Crystal Palace. As a construction it is infinitely more solid, and I must confess that its merits bear the test of long and frequent inspection better than the fairy structure which was reared like the airy fabric of some splendid vision four years ago, in our own Hyde-park. It is a fact, which I hope may prove to be one symptom of our national amalgamation with the French, that strength and solidity, which were thought to be the special characteristic of the English, are well represented in the Palace of Industry, while brilliancy and lightness, the usual notes of our lively neighbours, are still unequalled in the Crystal Palace. These remarks apply to the colour of the two buildings as much as to any part of them. The impartial critic will admit, that the colouring of the French building is superior, if not in brilliancy, at least in harmony, to our own.

There is a repose and harmony about it which is most remarkable. Almost all the light being admitted from the top, this affords room in the lower part of the building for those large masses of neutral background which, I have tried to point out, are essential to beauty of colour. The system has, indeed, been rather overdone, and it may perhaps be said that the neutral grey of the ironwork is deficient in relief.

The theory of Mr. Owen Jones was to employ principally the primitive colours. The blue used by him contrasts very well, I think, with the tender yellow on which it is introduced. It is more difficult to defend the brickdust red of the columns, which want relief and ornament. Had they been diapered with a rich crimson,—a process not very expensive in these days,—an excellent addition to their effect would have been produced. One great merit in the Crystal Palace is, that the atmospheric colouring of the fairy-like vault is preserved. How nobly, beneath its covering, did those ancient elm-trees stand out in strange contrast with palm-trees and tropical plants. Emblems they were, indeed, of civilization, combined with (what is its best part) a sturdy Saxon liberty. In the Paris Exhibition there is nothing like this,—there is nothing like fairy-land. The system pursued there is, in some sense, the reverse of ours: while with us each work of art was made subservient to the general whole; in France, on the contrary, much has been sacrificed (in general effect), in order to put the objects exhibited in the best light, and show them off to the best advantage. Instead, therefore, of having the primitive colours employed in every part, they are hardly used at all,—at least, in the framework of the edifice. There is at each end a splendidly coloured glass painting (though very indifferent both in design and drawing), representing allegorically France inviting the nations of the earth to the Universal Exposition. There is, moreover, goodly store of banners and flags, which add much to the general effect. In the Crystal Palace our first feeling partook of surprise, which afterwards diminished to a rational admiration. In the "Palais d'Industrie," on the contrary, we are studiously kept back from perceiving the vastness of the design; but our wonder is ever on the increase, and we are at each survey better able to appreciate the fidelity with which the objects of the promoters are worked out, even in the minutest details. Thus, at the entrance, and in the passages, which with us were totally neglected, there are hangings of great value, and tapestries of the choicest hues. Nothing is done in the temporary and slight manner which was in vogue with us. The Crystal Palace, or world's fair, as it is called, presented to the mind a great idea, in a consistent and intelligible shape; but there is nearly as great a difference between a beautiful sketch and a finished picture, as between the English Exhibition of '51, and that of the present year in Paris. The sketch was superior in ideal excellence, but the finished picture is more to be noted for the perfection of its parts than the simplicity of its design.

The colouring of the Palais des Beaux Arts deserves a few words of remark. The walls are of a dull and neutral grey, exactly of the same colour as the iron framework of the Palais d'Industrie. The effect appears to me decidedly bad. There are two good principles on which pictures may be hung. Consider them as exhibiting delicacy and beauty of tone, as in the sky of a landscape or the complexion of a fair face, and contrast them with a dull, heavy red. This is a very usual plan in England, and was much recommended by Sir T. Lawrence. View them, on the other hand, as brilliant representations of Nature, and place them on a field of light colour, a pale buff or a delicate grey. Thus it is we mount our water-colours with excellent success; but a dull, heavy grey, approaching green, answers neither one end nor the other. Landscapes especially, in which we have usually large quantities of a neutral green, suffer from this treatment. As connected with this branch of the subject, I cannot help stating that I consider the mixture of statues with pictures as a decided improvement. I wish that it could be more generally adopted in England. It has the glorious precedent of the Tribune at Florence in its favour, where the Venus de Medici is in the

same apartment with the *chef-d'œuvres* of Raffaelle. Why should our Academicians in Trafalgar-square be timid in following so bright an example.

There is another point, only one, on which I will touch, ere I conclude this somewhat lengthy paper. The French are naturally proud of having brought into more public notice, than was possible with us, the great subject of ecclesiastical art. This is delicate ground, but I hesitate not to say that in no country can any great art flourish, when debarred, as it hitherto has been with us, to too great an extent, of its highest privilege—that of doing honour to the Almighty in his sanctuary. Equally, or even more to be condemned than this total neglect, is the substitution of what I do not hesitate to call gaudy for genuine and sterling magnificence. Let us not forget that there are beautiful and highly-expressive colours and forms characteristic of the pure faith of primitive times. In this spirit, if undertaken at all, is to be approached the subject of the application of colour to our churches. Of the two extremes, we should ever remember that it is far better to be too sober in tone than approach either gaudiness,—too much positive colour, or garishness—too much positive light. What we should above all aim at is that solemnity of colour which befits both the subject and the place, the dignity of the holy religion we profess, and the great God whom we delight to serve.

ON THE FORMS, METHODS OF CASTING, AND RINGING OF LARGE BELLS,

WITH SOME SUGGESTIONS ON THE SUBJECT.*

I AM aware of the old saying, that "it is much easier to find fault than to suggest a remedy." This is perfectly true in the present instance. I feel assured that the long established system connected with the manufacture and use of large bells is attended with many serious inconveniences, and that a vast opening for improvement exists, whether we regard the form, the mode of casting, or the usual method of ringing them; and although I can confidently point out difficulties and objections, I candidly admit that I am not prepared to offer positive improvements or remedies. There is scarcely a bell-tower in the kingdom which is not shaken to a certain extent, and the masonry disturbed. In some cases fissures of a dangerous character are formed from top to bottom: in others the ringing is altogether discontinued for fear of the oscillations bringing down tower, bells, and ringers, to the ground in one common ruin. If any one will seriously consider the operation of raising a body weighing ten or fifteen tons (a weight greater than any stone used in the erection of the British Museum, the Post-office, or the Royal Exchange) to the elevation of 150 or 200 feet from the ground, and, when so raised, whirling it in the air until the arc of oscillation becomes a complete circle; then, in addition to the simple gravitating weight, make a calculation of the centrifugal force in ringing, he will only be surprised that the towers, and the buildings adjoining them, are not more frequently destroyed by such violent proceedings.

Mr. Ferrey, who has had frequent opportunities of becoming acquainted with the subject, has written to me as follows:—

"You wish me to state what I have observed in the towers which have come under my professional notice, as to the effect of the mode of bell-hanging hitherto adopted. My remarks apply rather to the bad consequences arising from neglect or ignorance, than to the principle upon which bells are generally hung in towers and campaniles, in the frames technically called cages. Still, if some plan of bell-hanging could be adopted less liable to derangement than the framework commonly used, much mischief to church towers might be avoided.

"In the course of my examination of many ancient churches, I have frequently had to deplore the serious injuries caused to the towers by the action of the bells. However judiciously they may be arranged within the framework, there will naturally be some unequal strain upon parts of it: no sooner do the ringers find a difficulty in raising the bells, owing to the want of a proper bearing on the gudgeons, than they immediately begin wedging up the framework of the bells from the walls, window mullions, or any masonry nearest to the point where the bell which works heavily is placed: no attempt is made to brace the woodwork and so remedy the defect; but in order to prevent further spreading, struts and wedges are placed between the framing and the walls of the tower. With a heavy peal of bells the disastrous effects of this slovenly system must be obvious: the great vibration arising from the revolution of the bells is at once thrown upon the walls, and the damage resulting from it becomes very soon apparent. Our ancestors meant to avoid danger from this cause, and I do not know an instance of any importance where the tower walls are not provided with ample set-offs and brackets on which the old bell framing was placed perfectly free from the surrounding walls, and generally with a space sufficiently wide for a person to pass round the bells; the whole framework resting upon these set-offs as a dead weight only, no timber of any kind being inserted in the walls. If this plan was properly respected, and the framework carefully kept free from the walls, much structural injury might be prevented; but even then the oscillation which occurs must eventually damage the building. I have been in old towers while the bells were in full peal, which have *rocked* to such a degree as to cause me alarm; and the quivering vane and tremulous motion of other parts have given full proof of the extent of the vibration. In some central towers, I have observed much injury to the supporting arches and piers; as in the case of the tower of Othery Church near Bridgewater, the structure was rendered dangerous by the manner in which the tower piers were split and crushed by the action of the bells. In many instances, the belfry chambers are closed against the ringers, and the bells are only permitted to be *tolled*, owing to the dangerous condition of the towers. Very recently steps have been taken to rebuild the upper part of the spire of Bellbroughton Church near Stourbridge, the masonry of which was so loosened by the vibration of the bells as to become quite dangerous. I could mention many other instances which have come under my notice of the serious results arising from bad bell-hanging, and ignorant attempts to remedy the evil; but I have no doubt that other professional men will supply you with examples. I hear that you are proposing some new form of bell, by which the same musical tones can be produced without the necessity of their being put in such violent motion. If you succeed in this, and can give us the same joyful effect without the necessity for cumbrous wooden framework and risk to the buildings, you will have effected a very desirable object."

That the process of throwing bells up and down is inconvenient as well as dangerous, is proved by the fact that nearly all large bells are struck on the outside with a hammer, instead of being whirled round, either because the tower is in a dilapidated state, or that too many men are required to raise the bell, if it is to be rung according to the original intention of the machinery.

The most sonorous material for bells is found to be a mixture of copper and tin in certain proportions, generally four parts copper to one of tin. It is an error to suppose that silver enters largely into the composition of some bells, though the recently discovered metal, aluminium, is said to be very sonorous. The greatest care is requisite during fusion, not to heat the materials more than absolutely necessary, and when melted and sufficiently hot, to commence casting them with as little delay as possible; for metals in a fluid state may be distilled or sublimed by heat like other liquids; consequently, the tin being melted at a much lower temperature than the copper, will be driven off in a sort of aeriform or vaporous state; therefore, in order to be certain that, when the bell is finished, it shall contain the proper quantities of each metal, great importance must be placed on putting in the tin at a proper time; or, when the cast is completed, its composition will be different in its proportions from what was intended: this will of course alter the sound, and very likely render such a bell less sonorous. If the bell is to be a large one, the metal must be fused at several furnaces, varying in intensity of heat, and some ready for the mould before the others; but wherever two or more currents of fluid metal meet, the rudiment of a fracture may be formed, as the chances are, that portions of oxide, or earthy matter floating on the surfaces, may prevent the perfect junction and incorporation of the two streams.

It is a common practice to pour hot metal into a cold mould, or into a mould that has been warmed on the surface by pouring a small quantity of the fluid metal into it, and then, by some contrivance, letting this metal run out again before it has had time to become solid. This plan will give a momentary warmth to the surface of the mould, or perhaps may warm it to the depth of half an inch; but it will not prevent the hot fluid metal when poured in from becoming solid wherever it touches the mould, while the interior of the mass will still remain in a liquid state. Under such circumstances the cast will be tolerably fine-grained, solid, and compact, where the metal has first cooled,—that is, wherever it has come in contact with the mould; but inside, where the fluid metal has not been so immediately cooled, but has remained longest in a melted state, the texture will be open, coarse-grained, porous, and highly crystalline.

If it is the general opinion that no better form for bells can be introduced than that which has been in use for ages, namely, the various modifications of a hollow cup-shape, we must endeavour to find some mode of improving the contour, and process of manufacture, so that cracks in the bells, and destruction of the towers, together with many other vexatious incidents, may be much less frequent than heretofore. Whatever the general external and internal form of a bell may be, the plainer the surfaces the better will be the sound. All mouldings, inscriptions, dates, and every kind of ornament, whether projecting or indented, should be avoided, as they interrupt the free vibration of sound, in proportion as the relief is high or low, and are therefore worse than useless on an object that is intended to please the organ of hearing infinitely more than that of seeing. A small bell finished in a lathe will sound better than one rough from the mould.

To produce a sound, bells are usually struck by a clapper within, or by a hammer on the outside. Such continued battering upon a cast or crystalline substance must, sooner or later, crack the metal. This may happen when the bell is quite new, soon after it is placed in the belfry, or not for several centuries. A number of comparatively insignificant hammerings or concussions will produce a very surprising effect if continued for a long period. The fracture may at first be so trifling as to be almost inappreciable by the most refined ear; but every stroke of the clapper will increase the evil, until the vibrations of the metal are so interrupted that, instead of a long-continued harmonious sound, an unpleasant jarring noise is produced, and the bell becomes useless. Mr. W. L. Baker's plan, proposed in his paper on Bells,* of gradually turning the bell round, is a great improvement.

The loudness of a bell will depend upon many circumstances in addition to its magnitude, weight, or the violence with which it may be struck. A calm and frosty atmosphere is favourable to the transmission of sound: violent winds and other aerial agitations interrupt its progress. When a strong wind blows from the hearer towards the sounding body, a sound often ceases to be heard, which would be distinctly audible in a calm.

Various circumstances have led me to consider whether a totally different form from that usually given to bells might not be introduced with advantage. Large blocks of stone are sometimes accidentally placed so that they balance on a small lump, immediately under their centre of gravity. While in this position, if they are struck with a heavy piece of wood, a deep sonorous tone is produced. On the same principle, a number of long strips of hard stone, of different sizes, are hung on two tapes, forming a rude instrument called the "Rock Harmonicon," which, when struck with a soft hammer, produces very harmonious sounds. Clappers and hammers are generally too hard: vibration is required, not harsh collision.

Solid masses of metal, formed in a particular shape, and suspended in a certain way, when struck with a hammer, will give very melodious sounds. For example, suppose a perfectly sound lump of soft steel be forged in the shape of a spindle, or of two cones of the same diameter but of unequal heights, and united at their bases,—each cone bearing a relative proportion

* By Mr. C. H. Smith, honorary member. Read at the Ordinary Meeting of the Royal Institute of British Architects, Jan. 14th.

* See page 19, Vol. XIII.

to the other, either in its cubical contents or superficial area,—the larger one to be three, four, or five times the size of the smaller: suspend this at the largest diameter or nodal part, by two pins or trunnions, and strike it with a hammer near the centre of gravity of the whole mass,—it will vibrate freely, and give a long-continued musical sound. Or take two pieces of metal, formed precisely of the same shape and dimensions as the last, one of soft steel, the other of bell-metal, and suspend them in a similar manner. If these two be struck at the same instant, either with a hammer or against each other,—care being taken that the striking point is near the centre of gravity of each,—the sound will be a loud musical chord, of a very harmonious kind.

Different experiments lead to the inference that coarse-grained, crystalline substances, are not so sonorous, and fit for the transmission of loud musical sounds, as those which are of a closer and more compact texture. Glass is extremely sonorous, and the sweetest tones may be produced from it. For this reason it is probable that if, instead of fusing and casting them, bells could be manufactured by hammering the metal into the requisite form, the same intensity of sound might be obtained from a much smaller quantity of it. Of course the manual labour of beating a ton of metal into the required shape would be very considerable; but if one ton of beaten metal be made to answer the purpose of four tons melted and cast in a mould, there would be a saving of at least 300*l.* in the cost of the material, which sum would be more than sufficient to pay for the hammering; and a bell so formed could not easily be cracked, nor would the tower be so heavily laden. The well-known Chinese gong is, generally, an instrument remarkable for its rudeness of manufacture and thinness of hammered metal; but when struck with a soft hammer it gives a deep bass tone, louder than can be obtained by any other means from the same quantity of metal.

I am prepared to hear it stated, that some of the sounds which may be very satisfactory on a small scale, and suitable for the interior of moderate-sized buildings, for high towers in cities, or open countries, would be almost useless. I have my doubts as to the correctness of these objections, especially to such as have not been fairly verified by experiments on a large scale, and thereby proved to be failures. The sound of some musical instruments, as the harp, for instance, is not over-powerful in a good sized-room, and not louder than a pianoforte, or violin, when in concert; yet, during a quiet evening, or early in the morning, its melody may be distinctly heard at a much greater distance, and long after other instruments have ceased to be audible. The same remarks are applicable to the beat of a common military drum, which is distinctly heard at an immense distance. Two pieces of metal, of a sonorous kind, one, probably, only half the weight of the other, but of the same form and proportions, will give the same, or very nearly the same sound. Taking this latter, and many other circumstances into consideration, it must be evident that the entire subject should be thoroughly investigated, especially at the present time, when we have a grand building at Westminster nearly completed, with a clock-tower waiting for its bells, one of which is to weigh 14 or 15 tons, and the prime cost of the metal only, for this one bell, cannot be estimated at less than 1,700*l.* When I hear of a work of this kind progressing in the middle of the nineteenth century without any improvement on the old system, I feel that the credit and character of scientific men is involved in the transaction. For, if they would turn their attention to the subject, it is not only possible,but extremely probable, that some plan might be discovered to answer the purpose of these ponderous bells, with perhaps half, or one-third of the quantity of metal, much less risk and difficulty of ringing, much less weight in the tower, and much more credit to all parties concerned in the great work.

Were I to present a peal of six or eight large spindles, or double cones, such I have described, to be suspended in the bell tower of the new church at Hanwell, I might expect to be sent after them, to the neighbouring asylum, for supposing that the churchwardens or bell-ringers were clever enough to ring the congregation to church with what might be mistaken for the clappers only. But surely, in these days of invention, when we live, as it were, in an atmosphere of steam-power, — when our words are sent, almost as quick as we can utter them, to the further end of a wire hundreds of miles in length, — when the portraits of living creatures, topographical views, or other complicated objects, can be produced in an instant by a flash of light, with such truthfulness and minute accuracy as to defy microscopic criticism,—it cannot be too presumptive to expect that, after a lapse of many hundred years, with the help of philosophic investigation, and mechanical science, we should be able to suggest some modification between the old ponderous bell, and the thin, loud-sounding gong, between the sweet notes produced by a musical snuff-box and the spindle-shaped steel which I have exhibited this evening. I will, therefore, conclude with the hope that some hints may be taken from my remarks, and that the discussion, which I trust will now follow, may lead to such experimental investigation as may ultimately change the present inconvenient, dangerous, and expensive system of bell-ringing.

In the course of the discussion which followed,

Mr. Cornelius Varley, visitor, said, the subject of bells divided itself into two parts: one, how to obtain a good bell and the fullest sound with the least weight of metal; and the other, how to support the bells and obtain the most of their sound with the least injury to the building: this was the architectural part. With respect to swinging of bells, Mr. Smith was right: whilst swung in open space there was no increase of sound, but it varied as the mouth was swung to or from the auditory. This opened the architectural question; for, whilst the bell hung quiet, it presented its best sound to the rough floor of the belfry, and spread it round into the corners, all serving as dampers, and a portion rushed out of the openings, where it was again cut up by the weather-boards. A bell so smothered by the inclosure needed to be much heavier, because we obtained but a portion of its sound; but if the bell were swung (though there was no increase of sound), it alternately presented its mouth to the two opposite openings, at which moment a larger proportion of sound was thrown out, and the discordant effect of its inclosure was lessened; and thus, by swinging, we only lost less of the sound; but this swinging was communicated to the tower, and were it not for the discordant proportions of all the parts, a spire would be seen to vibrate, yet all the parts trembled. The late Mr. W. Hardy contrived an inverted pendulum to show whether chronometer supports were firm enough, and it showed that many swung right and left with the pendulum, and so prevented any very accurate adjustment. Bells, being so much heavier than pendulums, will rock their tower, and Mr. Hardy's instrument could be adapted to show it, and probably would prove it to be more than any important building ought to be subjected to. An architect having produced a handsome building to endure the roughest weather, ought not to be required to spoil its proportions by any increased bulk to make way for and support a hidden agent, whose action is so inimical to durability. If bells were hung in the open air, over the conical roof of a tower or support suitably constructed for moving such weight, the cone below would spread their sound right and left; and if the cover were a large sounding-board, we should obtain the most effect from a given weight of metal. In cast bells, there was not only the rough surface, but inequality of thickness, a cause of discord inimical to the sound, and lessening its duration. This, in large bells, was very difficult to avoid; and, in thick castings, the two surfaces cooling first, often left a division within: this is a still greater cause for bad sound. The difficulty of ensuring sound metal in bell-casting was very great, as it was generally sound on the outside only, but crystalline within. In his own experience, he had found that metal cast in a hot mould cooled with a crystalline interior. Lord Rosse, by casting on a cold face, had succeeded in getting a sound mass all through. This question, however, concerned the bell-founder rather than the architect.

Mr. C. Barry begged to inquire of Mr. Warner, who was present, whether there was any mechanical difficulty in the way of counteracting, by some kind of equipoise, the effect of moving violently so large a mass of material as a church bell. This method was applied to some of the heavy machinery in the Cornish engines with success. Of course, the effect upon the masonry of a bell tower by the mere vibration of sound, was a different thing, and the amount of dislocation so produced was inevitable.

Mr. Warner said, there was no mechanical difficulty in the adoption of a mode of equipoise, which was indeed frequently done with small bells; but it would interfere with the ringing of changes.

The Rev. W. Taylor, visitor, referred to his statement last year, that the great bell of York had never been rung to set. That statement had been contradicted by Messrs. Mears, who wrote, that it had been *rung up to set* by sixteen men. He (Mr. Taylor), had, however, sent to York for an official report on the subject, and the report was, that the bell had never been rung up to set. He was himself at York in October last, and found that, in fact, although thirty-six men had tried it, the bell had never been rung to set; as indeed with the present hanging it never would be. At York, there was ample strength in the tower for any bell to swing, whatever might be its weight. At Erfurt, the tower was very thin, but there the bell, which weighed 275 centner (each 110 lbs.), was rung up to *set* by twenty-eight men. The latter bell was not cut into the stock as at York: the latter method took from the centrifugal force, and made it impossible to get up the bell. The bell at Erfurt was 5 ells in height, and 15 ells in circumference, the ell being 2 $\frac{3}{10}$ feet English, and it was cast in 1497. The different sounds of different metals was an interesting question, and on that point he would remind the meeting, that at St. Nicholas, Hamburgh, very large tuning forks of cast iron were struck instead of bells. Mr. Smith had shown that a common mason's chisel would produce a pleasing tone, but that the note of two such chisels was the same, although one was only half the weight of the other. How then was a deep tone (such as that of St. Paul's bell) to be produced, if increasing the quantity of metal would not effect it? The note of the Erfurt bell was F, but he believed Mr. Denison expected to pitch the Westminster Palace bell in E. The continuance of the sound, and the power to be heard at a great distance, were the principal tests of a good bell; and the latter object would be promoted by hanging bells, as in Italy, on the outside of the tower, instead of enclosing them with louvre boards, &c. This point appeared to have been overlooked at the Palace of Westminster, where the outlet for the sound was exceedingly small as compared with the size of the bell.

Mr. B. Denison, visitor, having been invited to state his views on the subject, expressed the interest he felt in it, as having been obliged to give directions for casting the large bells for the Westminster clock. He considered himself, however, only a learner at present, and was anxious to gain all the information he could by this discussion. The subject would afford ample scope for another discussion, and, whilst expressing his obligation to Mr. Smith for his remarks, he could not concur in the whole of his deductions. He should be glad to state how far he agreed with Mr. Smith, and how far and why he disagreed with him; but there would probably be hardly time for him to do so on the present occasion. The further discussion was accordingly adjourned to the 28th inst.

THE POTTERIES AT KENSINGTON.

THIS singular and neglected locality has at various times during the last few years been brought under public notice. As, however, it is still to the multitude one of the unknown skirts of the town, we will wend our way in that direction, towards what was not long since the "pleasant village of Kensington, about two miles west of London." Passing the church, a building containing many interesting memorials, but not remarkable for beauty (the bells, however, ringing merrily), the road up the hill brings us to the Notting-hill road. On reaching this, long streets of stuccoed houses run in all directions from Kensington-gardens, leading to squares, crescents, and terraces, respectably inhabited. A great number of houses are still in progress, and before half-a-dozen years have passed, the monster London will have established a great branch in this direction.

Wandering in search of the district surgeon through the locality to which we have referred, we were recommended by a clergyman to take the second turning down the Drayton-road, where, this gentleman said, "You will find a place which, both in a moral and sanitary point of view, is as bad as anything you will meet with in the *Potteries*." Proceeding in this direction, we overtook a policeman going home, after a long turn of duty. He said truly enough, "The houses in the Potteries, and in other parts of London for the poor, are very bad, but they are not all bad people who are driven into such places. I have seen a good deal of these things, having been sixteen years

PLEASANT PLACES.

"Just dropt in."

in the force, and never, to my certain knowledge, has there been such a difficulty in getting a shelter for a family as now: for my little house I have for some time past paid 6s. 6d. a week. The married men in the police, in consequence of the present rate of provisions, have a struggling time of it: we can hardly live but in the sort of crib I have here."

It was a small house, containing two rooms of a fair size, and some closets: although it had not been long built, the materials were so bad that the plastering had fallen off a large portion of the walls and ceiling: they were obliged to put tubs and basins in all directions to catch the water which fell through when it rained. Our sketch shows the aspect the room presented during a storm.

Inquiring on the way to the *Potteries* in the Notting-hill district, we heard many complaints of the drainage. A builder engaged in rearing a number of houses, was of opinion that the whole drainage had been done without sufficient plan. When he was at work the rain was about level with the floors of the kitchens. During storms of rain many of the houses were overflowed with water. This is the case in the Royal-crescent, where the houses have cost large sums. The cellar of a beershop in this neighbourhood was so deeply flooded by the sewer, that the empty casks floated and lifted up the floor of the rooms above. We were told, that in some instances the drains had been altered in their levels more than once, entailing expense on the house-owners.

Hemmed in on two sides by buildings such as we have described, the traveller this way will find the *Potteries*, as it is called, planted on a portion of a large extent of flat pasture-land, on which the operations of the builder are here and there indicated. Those who are acquainted with the old well-earned reputation of the Vauxhall Potteries over the water, naturally from the name of the place expect to find it occupied by a colony of those useful workmen. It is not, however, so; for, with the exception of the works of Mr. Adams, who is chiefly engaged in the manufacture of draining-pipes, tiles, and flower-pots, there seems to be no other manufactory of the kind in the neighbourhood. The sight of draining-pipes is always pleasant, and when looking at them stacked in quantities, we feel a strong desire to set a thousand little spirits to work to lay them in certain places which we too well remember. Here, however, are some of the inhabitants of the Potteries, one of them a decent-looking costermonger, who, in answer to our inquiry respecting the health of the place, says: "I think the place is very wholesome. I have lived here more than twenty years. It does not agree so well with strangers. The district doctor lives a long distance from here. We have sometimes fever, but I don't think that is the air. People are rather short of food. It is true that a short time since three children died in one house of fever, and there was an inquest held; but, sir, people just now are short of work, and the supply of victuals is scant. I don't consider it an unwholesome place. Pigs, sir! What harm can they do?" Such, generally, we find to be the opinion that dwellers in the worst sanitary positions state, in spite of their own convictions: it must, however, to a certain extent, be admitted that those who have been born in unfavourable localities do occasionally, if they escape the dangers of early years, live with impunity in atmospheres which would destroy strangers.

In a part of the Essex marshes which during

a considerable portion of the year is to a great extent hidden by fogs and moisture, we have seen families—one in particular—reared in the fens, consisting of nearly a dozen strong young men and women: strangers coming to the same locality would be stricken with ague and fever: in the cases alluded to, the parties have been in the possession of all the comforts and necessaries of life, a circumstance which has to a certain extent kept off the effects of the dangerous atmosphere by which they are surrounded.

The most striking feature of the Potteries district is an excavation of great extent, made by the removal of clay for the manufacture of tiles, &c. At the time of our visit the water in the pool was considerably below the level of the road and streets adjoining: at times, however, this great hollow is full of water, and so extensive does it then appear that it is familiarly known amongst the inhabitants by the name of "The ocean:" this pool has no drain, and is, therefore, as a matter of course, a collection of stagnant water, settling into the adjoining earth or passing by absorption into the atmosphere. This foul lake is bordered to a considerable extent by the streets and houses called "The Potteries," which in a degree resemble the hovels which have been so extensively planted in Agar-town: the former have, however, an advantage over the latter in a sound road, which has been formed through the place by the parish.

It is difficult to convey by words an idea of the dilapidated and filthy appearance of some of the houses on the north bank of what, for want of a better name, we are obliged, like the inhabitants, to call "the ocean." Some of the dwellings are not houses at all, but caravans which had become too old for service at the country fairs, and were here placed in a line with the ill-shaped erections of bricks and mortar: adjoining these, in fact surrounding them, were the thickly-populated piggeries, and their unwholesome accompaniments.

Leaving the foul banks of "the ocean," the streets which compose the Potteries stretch towards the north. Many of the houses are in tolerable condition, and the roadway, although not good, infinitely superior to the deep and almost impassable mire of the roads in Agar-town.* It is easy, however, to observe the dangerous accumulation of water and filth, the overflow of cesspools and such like matters, standing in pools against the walls of the houses. Some of the houses present a most dilapidated appearance. One in particular, surrounded by a mud fence, equals many of those sheds which, in parts of Ireland, so much pain the eye. On the outskirts, under the shelter of a wall, several gipsies were comfortably encamped. The gipsies seem to have the best of it: they have no pigs: they are at a distance from the putrid gutters and other refuse, and ready at an hour's notice to tramp off to a more favourable site, if the health of the neighbourhood becomes affected. In the course of a few years, the houses which form the neighbourhood called the Potteries will have vanished, and perhaps the name be altogether unused; and those living in the handsome dwellings which may then occupy the site, will not be able to form an idea of the scene now presented by "the ocean,"—piggeries, cavernous dwellings, ruined cottages, and gipsy encampments.

* The [illegible] worth while to make a short expedition to the [illegible] witness [illegible] neglected [illegible] fares.

THE BARRACK BOARD.

THE formation of a Civil Architectural Barrack Board has been talked of, the public may like to know there is now in existence a staff for the construction and repair of barracks, we believe, consisting of about 300 military engineer officers, at an annual cost of nearly £100,000, attached to which, according to the estimates for 1856, there is a professional civil branch, costing the country annually about 70,000*l.*; and the Government are no doubt in a quandary as to what ought to be done with this large and costly permanent engineering staff. Most likely the military branch will be employed on military duties in the field, leaving casualties to gradually reduce its numbers, whilst the civil branch will be left on hand, to puzzle the Right Hon. the Secretary for War as to the easiest, simplest, and least expensive mode of providing for their future employment or superannuation.

This professional civil branch consists of about 127 clerks of works, and 154 foremen of works, with a surveyor and two deputy-surveyors, and a teacher of practical architecture at their head.

The foremen of works have charge of the outdoor superintendence, and are generally superior in education and practical experience to clerks of works in civil architectural practice; whilst the clerks of works (who pass a stringent architectural examination) are for the most part employed in the office, and invariably perform the daily duties of a civil engineer and architect, together with the whole of the estimating, measuring, and financial affairs of the department, acting, of course, under the orders of the military engineer officer in command, the latter acting and controlling the office duties so as to afford a check on any malversation of finance.

The future disposal of this civil branch seems now to be a somewhat difficult and expensive matter; and, although the war minister may be able to put the "right man in the right place," it is well known that he has quite mistaken the position and duties of the civil branch of the royal engineer department.

THE ISTHMUS OF SUEZ MARITIME CANAL.

THE object of this extraordinary engineering work, now again occupying public attention, is to effect a direct communication between the Red Sea and the Mediterranean, by the shortest route across the narrow Isthmus of Suez. It is intended to be a ship canal of the largest size, to allow vessels of 1,500 tons burthen to pass direct from one sea to the other, without the necessity of discharging cargo. For the mere conveyance of passengers, the railway now in course of construction, from Alexandria by Cairo to Suez, would be ample accommodation; but for the transport of merchandize, the unshipping at Suez, transport across the Desert, and re-shipping at Alexandria, is rather too slow work for the rapid exigencies of the present time. It must also be borne in mind that the traffic to the East is continuously increasing, and in process of time will demand greater facility of transit than the Desert Railway will be able to afford: for light goods and passenger traffic, the railway will be of infinite use: but how much more so a ship canal to admit at once the passage of a vessel with all its goods and passengers on board.

It will shorten the distance of the northern parts of Europe by 3,000 leagues; and for the Mediterranean ports by at least 3,400 leagues. It will be far the most direct route to British India;—not only the shortest, but the safest, notwithstanding doubts expressed to the contrary by interested parties.

The idea of this grand canal is not by any means a new one. It is, in fact, only the revival of what has been once already achieved on a smaller scale, in what is called the Dark Ages. When Great Britain was a wilderness, and its painted inhabitants as wild and uncivilized as the aborigines of Australia, the idea of this canal had attracted the attention of the then civilized world.

All the great men who have swayed the sceptre of Egypt have recognized its practicability, and wished for its execution. It has been done, neglected, forgotten, disused, and finally choked up, so that at present its trace scarce remains. History has preserved its name on her page, and that is all that remains of its former glory and utility.

Sesostris, Alexander the Great, Julius Cæsar, Amrou, the Arab conqueror, Napoleon, and lastly Mehemet Ali, have, more or less considered the question. Julius Cæsar little dreamt in his day that Gauls and Britons would tread in his footsteps, and league together to investigate and endeavour to carry into effect the bold ideas that once occupied the serious attention of his imperial mind. The site is scriptural as well as historical. The once highly fertile vale of Goshen touches on the very line of route now proposed, and may again be fertilized if this noble scheme be carried out. In ancient times, as above stated, the Nile and Red Sea were connected by means of a canal; and at the present time a fresh-water canal flows along the valley of Tornilat, or the vale of Goshen, fed from the Nile.

It was in existence for about a hundred years, to nearly the middle of the ninth century before the Hegira,—then for a further period of 445 years, commencing with the first Ptolemies, the immediate successors of Alexander the Great; and lastly, for a third period of 130 years after the Arabian conquest, as stated by Monsieur Ferdinand de Lesseps, in his memorial to Mohammed Said, the present Viceroy of Egypt.

Monsieur Lebeau, in his "Histoire du Bas Empire," quoting Albufeda, Prince of Syria, historian and geographer, living in the 753rd year of the Hegira, states as follows:—

"The coast of Farma (a town a little to the east of Pelusium, on the Mediterranean) was only seventy miles (106,000 metres) distant from the Red Sea. This space was a very smooth plain, slightly elevated above the level of the two seas.

Amrou formed the design of uniting them by a canal which he would have filled with the waters of the Nile; but Omar having opposed it, for fear of opening an entrance into Arabia for the ships of the Christians, Amrou turned his thoughts in another direction. There was one ancient canal called Trajanus Amnis, which Adrian caused to be brought from the Nile near Babylon, in Egypt, as far as Parboëtus, now Belbis. He met at this place with another canal, commenced by Nechos, and continued by Darius Hystaspes, and the two together discharged themselves into a lagoon of salt water, at the outlet of which Ptolemy Philadelpheus caused a large trench to be made, which conducted the waters as far as the town of Arsinoë or Cleopatris, at part of the gulf where Suez now is.

The whole of this canal being filled up with sand, had become useless at the time of the famous Cleopatra. Amrou was not deterred by the ancient prejudice which, supposing the waters of the Red Sea to be higher than the soil of Egypt, created a fear of opening a passage for them, and he made it navigable for the transport of the corn of Egypt into Arabia. It is that which is now called Khalig, which passes through Cairo, but only goes as far as the lagoon called the Lake of Sheib. The remainder, as far as the Red Sea, is entirely filled up, although some traces of it are still distinguishable."

After the enterprising Amrou came Sultan Mustapha III. who intended to execute a canal direct across the Isthmus of Suez, when peace offered him the necessary leisure.

From this brief sketch it will be seen, that in remote times the execution of this canal has occupied the attention of the various masters of Egypt. Great historic names are associated with this narrow strip of land: ancient engineers have passed away: their works and records have followed: it now remains to see what newer nations and a different race of men can do: if they can carry out the bold ideas of engineers of ancient times.

During the occupation of Egypt by the French, under Napoleon, the site of the old canal was traced by the academicians and engineers attached to the expedition, including Monge, Berthollet, Lepère, and others equally eminent. Napoleon himself appears to have taken great interest in the matter, for he more than once alludes to it in conversation with Las Casas, O'Meara, and others of his memorialists at St. Helena.

Napoleon states in one conversation—"The ruins of the canal between the two seas are well defined. The two banks are about twenty-five toises apart. A man on horseback would be hidden from view in the middle of the canal." Berthier also found traces of the canal traversing the Oasis, which formerly carried water from the Damietta branch of the Nile to Bubastes, on the Pelusian branch. The re-

mains of this canal have the same dimensions as that near Suez. O'Meara records the Emperor's description of his own plan.

So far we have had the opinions and ideas of Napoleon, a man essentially practical. He believed in the easy completion of this work: he examined the ground himself, with his staff; and all concurred, both in its utility and facility of execution,—and this, notwithstanding the strange error committed in the levels.

The French engineers, after taking a series of levels, arrived at the conclusion that there was a considerable difference between the respective levels of the Red Sea and the Mediterranean, and for awhile this error was received as a great fact in geography, and became a great puzzle to writers in physics.

The difference of level between high water at Suez and low water at Tineh was reported to be 9 metres 90 centimetres. This reported difference of level gave rise to great discussion among the engineers and geographers of Europe: it was explained on physical and geographical principles, became altogether doubted, carefully tested, and finally proved to be the result of instrumental or clerical errors in the process of taking the levels. The errors are not surprising when we bear in mind the circumstances under which the levels had to be taken,—amid the stirring scenes of war, through hostile tribes of Arabs always on the look out to catch a stray infidel or two, amid the bustle and excitement of marches, countermarches, and skirmishes. As the engineers had to run the gauntlet of a whole host of dangers in taking their levels, it is easy to suppose they had but little opportunity of taking check levels for verification. Many of the observations were taken by the water-level.

It would scarcely have been worth while to allude to these errors had it not been for the discussions, doubts, theories, and mystifying explanations they gave rise to, in the grave, but busy world of science.

Many travellers interested in this important question visited the Isthmus to investigate this phenomenon: amongst others some English officers arrived on the spot and commenced a series of observations with the barometer, and afterwards by the boiling-water process, and, as a result of their interesting labours, reported that they had not been able to find any appreciable difference between the level of the two seas.

It now became necessary to settle this important point, and re-open the whole question, test the various conflicting statements, and put an end to all doubts on the subject.

In the year 1847, a society, "established for the investigation of the Suez canal," at the head of which were MM. Négrelli, Robert Stephenson, and Talabot, caused a new survey of the whole country to be made by experienced French engineers, under the superintendence of M. Bourdaloue, a gentleman well known for his acquirements and practical knowledge in these kinds of investigations.

The surveyors were provided with the best instruments in use, with all the most recent improvements. Thus equipped for the campaign, they commenced operations under the best auspices. In addition to this, they were assisted by a brigade of engineers furnished by the viceroy of Egypt, and also by a company of artillerymen, who assisted in the various operations.

The surveying party was divided into several separate divisions, each working independently of the other, thus affording facilities for separate verification of the work of each division, where necessary. The results of these operations were reduced, and published in a report in 1847, by M. Talabot, which clearly established the errors committed by the engineers in the expedition under Napoleon; yet so high was the opinion entertained of the *savans* who accompanied Napoleon, that many still remained incredulous, and doubted the existence of any such difference between the two series of operations.

To extinguish these contradictions, a second verification was undertaken in 1853 through the active instrumentality of M. Sabatier, consul-general of France in Egypt, the operations in this case being conducted under the direction of Linant Bey and Mougel Bey, the viceroy's engineers. The result confirmed the operations of 1847, and satisfactorily proved the error of the surveys made in 1799.

The new series of levels only differ o. met. 1814 from that taken in 1847, and give as the difference of level between the "station on the quay of the hotel at Suez and low water in the Mediterranean, 2 met. 4286, instead of 2 met. 6100, found by the operations of 1847," giving a difference of only o. met. 1814, a little more than a centimetre and a half, being less than three-fourths of an inch in a distance of 90 miles.

Thus the question of levels is terminated after having rested in doubt and obscurity for nearly fifty years.

The level nature of the ground in the track of the proposed canal will be seen from the following figures, being four of the *highest points* in the whole line above the datum level of low water in the Mediterranean at Tineh, viz. 16 met. 5950, 7 met. 8210, 3 met. 8280, 11 met. 6300, these being literally the only elevations met with in a distance of ninety English miles.

On this subject, the memorial of M. Linant Bey and Mougel Bey, by way of precursory scheme, is very precise:—

"The levelling also shows, that by adopting 6 met. 50 for the bed of the canal, there will be a length of 18 kilometres in the Bitter Lakes, where there will not be a shovelful to remove, and for another 18 kilometres will be very little to do; and as these lakes are dry at a depth of 8 met. 39 below low water, all the earthworks for the whole length of them could be performed in the dry, if found advantageous to do so."

In my next I will endeavour to discuss the practicabilities and peculiarities of the line of canal as now marked out from Suez to Pelusium, with such other information on this great question as may prove interesting to the professional and non-professional readers of the *Builder*.

JOSEPH LOCKWOOD.

CHURCH-BUILDING NEWS.

Lincoln. — Some improvements have been effected in the church of St. Mary-le-Wigford, in this city, and the church, says the local *Chronicle*, is now well worthy a visit by the lovers of Gothic architecture. It is true, the ugly old pens of pews still remain, and so does the painted flat ceiling; but the oak roof will, before long, be exposed, and the old pews are to be displaced in due course, to give room to seats with doors.

Ely.—Steps are being taken to raise a fund for a painted window to be placed in Ely Cathedral, to be called "The Old Choir Boys' Window." The Dean and the Rev. E. B. Sparke have been consulted on the subject, and have signified their acceptance of a proposal to that effect. Many of the old choir-boys who have been applied to, have at once given their names as subscribers.

Wisbech. — The Church Restoration Committee here have accepted a tender from Mr. H. Ringham, of Ipswich, for the execution of the most necessary works in the parish church. The internal fittings are to be of the best wainscot oak, and the cost of the works to be included in the first contract will be 2,728*l.* 14s. There are other works which the committee would be glad to undertake, but which their now available funds do not justify them in attempting. These works include ornamental iron gates for the tower gateway and the south porch, an elaborate restored font cover, an ornamental and enriched ceiling for the chancel, a new staircase to the parolse, a ceiling for the vestry, &c. The estimate for these works is 713*l.* The following tenders for the execution of the *whole* of the works in wainscot oak were received:—

	With doors to the pews.	Without doors.
Mr. Henry Ringham, Ipswich ...	£3,511 0	£3,344 14
Mrs. Rattee, Cambridge	3,755 1	3,630 11
Mr. J. Whiting, Northampton ...	3,910 0	3,801 0
Mr. F. Ruddle, Peterborough ...	3,953 0	3,853 0

Blisworth.—The church of St. John the Baptist, Blisworth, was re-opened on Thursday before last, after being closed for about seven months, during which it has undergone considerable restoration. The roofs of the nave, north aisle and chancel, have been renewed: those of nave and chancel are high pitched, and covered with Westmoreland slates, graduated in size from eaves to ridge. In the chancel roof, the opening above the collar beam and the spaces between the arch ribs and principal rafters are filled with tracery of decorated character, and the arch ribs are finished on the under side with mouldings. The roofs are boarded, and the whole stained with Stephen's stain. A gallery at the west end of the church has been removed, and the tower arch thrown open and restored. On the west side of the tower, that which was formerly a decorated window has for many years been robbed of its tracery and mullions, and used as a doorway to a kind of ringing loft, with coal place underneath, and a wretched wooden staircase on the outside of the tower to ascend to the loft. The ringing-loft and staircase have been cleared away, the window and its tracery restored, and this, with the tower arches now thrown open, according to the *Northampton Herald*, presents a pleasing feature in the interior. The pews or seats have been remodelled, made low and open, and finished with seat-ends of uniform character throughout the church. The arches and piers of the nave and chancel have been cleared of many coats of whitewash, and the whole restored with stone corresponding with the original. The walls have been re-stuccoed, but not jointed. The woodwork is yellow foreign deal, stained of oak tint. The whole outlay, including architect's commission, is about 850*l.* The Rev. Wm. Barry contributed about 400*l.*: the parish subscribed 350*l.* leaving a deficiency of 100*l.* towards which 44*l.* 4s. 2d. have been collected. The works have been carried out under the superintendence of Mr. E. F. Law, of Northampton, architect.

Wheatley.—It was intended, according to an Oxford paper, to lay the first stone of the Wheatley new church on Tuesday last. The new and larger building which it is intended to erect after a design by Mr. Street, will be of great benefit to a large and poor population.

Leigh. — The ancient church in this small village having for a long time been dilapidated, it was determined to erect a new one, not a very easy task in a small agricultural locality. In addition to many contributions the parish made a rate to collect 300*l.*: 50*l.* were granted by the Incorporated Church Building Society, and a like amount was given by the Diocesan. The new structure is built of stone from the quarries of Sir B. Brodie, Bart. at Betchworth, with Bath stone facings, and has been erected under the superintendence of Mr. G. Larmer, of Reigate, architect. The interior woodwork is of oak, with panelling over the chancel, and carved bosses. The pavement is of Staffordshire tiles. At the east end is a stained glass window, presented by Mr. J. W. Freshfield, M.P. The designs have been carried out by Mr. Shearburn, of Dorking, builder.

Tewkesbury.—The plans for the burial ground and buildings for the new cemetery of this town and parish having been prepared by Messrs. Medland and Maberley, of Gloucester, the Board advertised for tenders for carrying out the work. Three only were sent in, the lowest of which was 300*l.* above the amount specified by the architects as the maximum sum to be spent. Mr. Medland accounted for this by additions to the plans. The architects were requested to reduce the cost of the works by omitting several parts of the building, and then to confer with those who had sent in tenders.

Devonport.—The local *Independent* records an untoward occurrence in reference to the new church of St. Stephen, in George-street, on St. Stephen's day. The spire had just been completed and the scaffolding nearly cleared away, when, in the midst of a heavy gale of wind, the top of the spire was observed to rock to and fro, threatening to topple over, much to the fear of the occupants of the houses in the immediate locality, who quitted their habitations in consequence. The gale, however, subsided, and the fears were not realized, though the apex of the tower, formed, it is said, of one piece of stone, several feet in height, and surmounted with a point of iron, was removed two or three inches from its position on the eastern side, where it now remains. A difficulty, it is said, has arisen as to who shall bear the costs of repair.

Nottingham. — On Tuesday before last the newly-erected church of St. Matthew, in Upper Talbot-street, which is visible as the terminal point of a great many views in the neighbourhood, was consecrated by the bishop of the district, in presence of a numerous body of his clergy.

Brighouse. — The Bradford *Observer* states that the new Independent chapel at Brighouse, in that vicinity, has been opened for divine worship. The chapel will hold 900 people, and has school-rooms attached. The cost of the buildings is 3,000*l.* of which only 200*l.* have to be raised.

Knockbreda (*Ireland*).—On Sunday before last, according to the *Belfast Newsletter*, the parish church of Knockbreda was re-opened for divine service, having been closed for upwards of sixteen weeks while undergoing repairs and alterations under the direction of Mr. Fullerton, the diocesan architect of the Ecclesiastical Commissioners for Ireland. The church has been newly pewed, also a new pulpit and reading-desk provided, and the chancel and communion-table newly modelled and arranged. The interior walls are stone-finished, and the church heated with warm water apparatus furnished by Messrs. Musgrave, of Belfast.

ST. SAVIOUR'S, SOUTHWARK.

THERE are many interesting things in *Sudvercha*, the South-work of London, but none so much so as St. Saviour's, the church of the priory of St. Mary Overy, notwithstanding the treatment it has received. It has a nave, transept, choir, and Lady Chapel, with a lofty tower at the intersection of the transept. The Lady Chapel, choir, transept, and tower, were restored some years ago, partly under Mr. George Gwilt, and partly under Mr. Wallace; but the nave, left for a time without a roof, was taken down and rebuilt in most incongruous and ugly fashion. The church, of which portions remain, was commenced in 1208, and these show how fine a specimen of the Early English style it was. The proportions of the original nave were pleasant to look at, and some of the sculptures were of much interest. With care, and some expenditure, the ancient nave might have been restored; and this church, which is only surpassed in the metropolis by Westminster Abbey and St. Paul's, might have been preserved intact for future generations. However, the old nave was removed, the present structure erected on its site, and certain liberties taken with the transept of the church; — the subject of our engraving, looking north. These unpleasant additions consist of large ladder-like, unsightly staircases, large galleries, and wooden partitions, which so clog up and disfigure the fine proportions of the transept, destroy the view from the choir, and are so contrary to good taste, that we feel inclined to state that nothing so bad is to be met with in London, and that is saying a great deal. We have in the view left out these erections, and hope that by some fortunate circumstance they may be one day removed.

The traditionary history of St. Mary Overy's and the ferryman's daughter, is too well known to need here particular mention: we may, however, note that a priory was originally established on this site, which was afterwards converted into a college of priests, but that, like the former institution, proving of no long duration, it was, in the year 1106, refounded by Norman knights and the Bishop of Winchester, for canons regular, and from its dedication to the Virgin Mary and its situation, was called St. Mary Overie, that is, St. Mary over the River.

This edifice was destroyed by fire about the year 1207: on this occasion, a great loss of life, estimated at from 2,000 to 3,000 persons, took place on London-bridge. In the ruined nave were a semicircular-headed door and some other portions of the old church, and a few years ago, after the present structure was again endangered by a great fire, another part, consisting of a semicircular apse at the north-east corner of the vestry, formerly St. John's Chapel, was brought to light. These fragments, together with some other circumstances, would seem to show that the church of the date of 1106 was situated on the north side of the present choir.

After the fire of 1207, a considerable portion of the edifice was rebuilt. Peter de Rupibus, Bishop of Winchester, added to the priory "a spacious chapel," which he dedicated to St. Mary Magdalene, and this being afterwards appointed for the use of the inhabitants, eventually became a parish church. The monastery, &c. was surrendered to Henry VIII. in the year 1539, when the revenues amounted to 624*l.* 6s. 6d. per annum, whereupon the inhabitants of the parishes of St. Mary Magdalene and St. Margaret, by the assistance of Stephen, Bishop of Winchester, purchased of King Henry the stately conventual church. These parishes in the year following were united by Act of Parliament, by the new appellation of St. Saviour's, and the churchwardens constitute a body politic and corporate, and the churches of St. Mary Magdalene and St. Margaret being laid aside, St. Saviour's has ever since been used as the parish church.

In the year 1611, King James I. for a valuable consideration, granted, by letters patent, to the churchwardens and parishioners in "free soccage," the rectory and parish church of St. Saviour, together with all the glebe lands, tythes, tenths, &c. in consideration of which the said churchwardens and parishioners are obliged to provide a fit house for a grammar-school, and to keep a good master to teach the children of the parish, paying to the said master, 20*l.* per annum, and to an usher 10*l.* per annum; and also to provide two able chaplains to preach in the church, and to pay them 30*l.* per annum each. These conditions were performed until 1672, when the said sums were found insufficient to maintain the officers mentioned: whereupon the stipends of the chaplains were raised to 100*l.* each, and the schoolmasters' to 30*l.* each. These provisions for religion and education have since been very considerably increased, and rendered more adequate to the exigencies of the times. We have mentioned this circumstance as one of many hundreds of examples, both in London and provincial towns, during the times of James I. Queen Elizabeth, and some of the succeeding reigns, of parishioners and corporations recognizing the necessity of promoting public education, and, considering the comparative numbers of the population then and at present, it is maintained by some, that proportionable effort has scarcely been made for the education of the poorer classes, although it must be admitted that St. Saviour's Grammar School is an excellent institution.

A few hours may be well spent in this church, either by the architectural student, or by those curious in old-world matters. There is an interesting monument to the poet Gower, consisting of a canopied tomb, effigy, and inscription. The figure of the poet is very fine, and was awhile ago painted and gilt (we believe under the superintendence of the late Mr. Etty, R.A.). According to Mr. Timbs, Gower was married in this church in 1397, by William of Wykeham! The burial register records, under the date 1607, the burial of "Edmond Shakspeare, player, in the church:"—he was the great dramatist's brother. John Fletcher (of Beaumont and Fletcher memory), was also buried at St. Saviour's, in 1625. There are in different parts of the church several quaint and curious monuments.

An ambitious monument in the north transept is to note the resting-place of a worthy whose

——"Virtues and his pills are so well known,"

that it seemed almost useless to hand his fame to posterity. It is, however, well for the fame of the pill-vendor, that it was just thought worth while to cut on the pedestal on which lies the effigy of the *doctor*, in flowing robe and wig, in most uncomfortable-looking attitude, an inscription and his name.

There are several monuments of about Queen Elizabeth's time, and a cross-legged figure of a Templar, without any inscription. Massinger, the dramatist, was buried here with some pomp, but no stone marks the place. In the Lady Chapel, one of the finest in the country, is a large tomb to the memory of Bishop Andrews, with some other matters worthy of note.

Some stained-glass windows, in memory of Protestant martyrs, have been put up recently in the Lady Chapel, and are effective as seen from the choir.

Chamberlain says that in his day, 1771, the remarkable places and things near the church were the Town-hall, the Clink Prison, the Dock, a good market, and the Lord Montague's house, in Montague-close; where was also the Lord Mounteagle's house, now or late of the estate of —— Overman, esq. In this close it is said the Gunpowder Plot was discovered by the miscarriage of a letter.

Near St. Saviour's Church, fronting the Thames, was formerly situated Winchester House. A building was first placed here by William Gifford, bishop of that see, about 1107, for his town mansion, and that of his successors. In Cook's "Views of London," a part of the palace, in which was a marygold-window, is shown; and it is only eight or nine years since a very picturesque fragment of this ancient dwelling was removed.

Nearly adjoining to Winchester House was the residence of the bishops of Rochester, which has been entirely removed. Close to the house of the bishop were the notorious Stews, established in the reign of Henry II. A.D. 1162, plundered by Wat Tyler in 1381; and suppressed in 1546, in the reign of Henry VIII. by proclamation of that king.

All vestiges of times as old as Shakspeare and the playhouses there seem to have vanished, except a house which some think may be part of the original Falcon Tavern. This is situated not far from the Falcon Glass-works. It is evidently of considerable antiquity. The preaching-place of John Bunyan near here is not now to be recognised. There are, amongst several good institutions near here, the almshouses founded by Alleyn, the player, and some other things worth hunting up.

COMPETITIONS.

Rugby Town-hall Competition.—We continue to receive complaints as to exaction of 2s. 6d. for particulars; and, more especially, as to the largeness of the accommodation required compared with the amount proposed to be spent. Writers ask, "If the cost is exceeded in the end (as it surely must be), who should have most blame, the penny-wise promoters of the scheme, or the architects who fraudulently furnish designs that they know cannot be executed for anything like the stipulated cost."

Middlesbro'-on-Tees.—The design of Mr. Oliver, jun. has been selected in competition for the new Congregational Church in Middlesbro', Yorkshire.

The Barracks Competition.—You have already suggested that the designs sent in for barracks in competition should be publicly exhibited. Pray, sir, raise your voice again in favour of the public having an opportunity of seeing the plans, and expressing, through the press, their opinion, as in the case of the Nelson monument. A fairer decision may then be arrived at, and the *people* have their *rights*, for surely they should see what they pay for, and each competitor may then see that the best design is chosen.—J. T. W.

Free Church, Glasgow College.—We learn that the Free Church General Assembly's Committee on the Glasgow College have selected the plan of Mr. Charles Wilson, architect, as the most eligible for the new Free Church College to be erected in this city on the site purchased in Lynedoch-street. Plans were obtained in competition, three of them from architects in this city, and one from Liverpool. The building will be in the Modern Italian style.

New Independent Chapel, Tozteth-park.—Out of several designs sent in for the new building, that of Messrs. Smith and Grundy, of Manchester, has been accepted. The style is that of the Decorated Gothic, the front view presenting a semi-octagon. Spacious school-rooms will be built on the ground-floor, together with a lecture-room and four class-rooms, all of which can be thrown open for public meetings. Behind the edifice a vestry will be erected in continuation of the building, and in conformity with the style of the chapel.

GLASGOW ENGINEERS IN PORTUGAL.—It having been determined to introduce water by gravitation into some towns in Portugal, says the *Glasgow Gazette*, Mr. D. Mackain, C.E. has been consulted as engineer, and has just returned from Portugal after a preliminary inspection. Mr. William Kyle proceeds immediately to take the requisite surveys and sections.

ST. SAVIOUR'S, SOUTHWARK: THE TRANSEPT, LOOKING NORTH.

HISTORY OF KEYS.

AT a meeting of the British Archæological Association, held on the 9th instant, Mr. H. Syer Cuming read a paper on the History of Keys. He pointed to a strip of bark and a thong of leather, as the first means by which property was secured, prior to the advanced stage of social refinement when permanent houses were constructed, and the door and the coffer fastened with bolts, latches, and bars. Homer was cited as the earliest writer who mentions anything like a key, and special reference was made to the primitive locks and keys of wood of the ancient and modern Egyptians. The iron keys of Egypt were described, and illustrated by examples from Thebes, and the curious fact pointed out that nearly similar specimens are met with in Western Africa. After a brief notice of Greek keys, attention was directed to the Roman era, and a minute description given of the fixed and movable locks, the dentated, piped, and broached keys, and of the variously-formed bows surmounting the stems. Mention was made of the small keys attached to finger-rings, and of the *clavis adultera*, the false or skeleton key of the Roman housebreaker. The Anglo-Saxon and Norman keys were then dwelt upon, and the various forms and fashions of the key-bows from the thirteenth century down to a later period were described. The superstitious belief in the magical powers of the key, of its employment as a heraldic bearing, and its frequent adoption as a sign in former times, were next alluded to; and Mr. Cuming concluded his paper (which was profusely illustrated with examples of keys of all ages, from the days of the Egyptians to those of George IV. as shown in the key of the late Carlton House) by enumerating the different modes by which keys have been held together, showing that a ring was among the earliest as well as latest contrivances for the purpose. It was remarked, that two objects were frequently found appended to the keys of the doors of stables and cow-houses, namely, a perforated flint and a horn; the former of which was declared to be an amulet to guard the creatures from the attacks of nightmare, and the latter, an emblem of the good Pan, the protector of cattle, and hence regarded as a charm, and both of which have been used from the most remote antiquity.

PROVINCIAL NEWS.

Cambridge.—The spire of the new Conduit, according to the local *Chronicle*, is now completely finished, and in celebration of the event, the Union Jack floated from its summit on Friday in last week. A very few days were to complete the entire structure, which had been retarded in consequence of the non-arrival of the slate basin.

Woolwich.—A new ship-building slip, contracted for by Messrs. Rigby, at the east end of the dockyard, and which has been twelve months in construction, is now completed. This new slip is sufficiently large for building men-of-war of the largest tonnage. It is 280 feet in length, and of proportionate breadth. The foundation and flooring of the shipway have been sunk to a considerable depth, a bed of concrete from 10 to 12 feet in thickness forming the lower stratum, which rests on the chalk rock. This is covered with brickwork. The floor consists of large blocks of masonry, 15 inches in thickness. The masonry and brickwork are set in cement. A portion of the river wall, in connection with the slip, is also completed. This important addition to the dockyard at Woolwich has been carried out under the general superintendence of Mr. Bourneys, clerk of the works.

Canterbury.—The new chapel school for the garrison is approaching completion. The addition of a gallery over the main entrance, not embraced in the original design, has caused some delay; but the whole will be finished in a few weeks.

Tunbridge-wells.—Towards the erection of the proposed schools in connection with Christ Church, the sum of 800*l.* has been already realised: this is half the estimated cost of the land, school-room, teacher's house, fittings, offices, &c. The committee have come to the determination to build the school-room only at present, tenders for which will be shortly submitted. Mr. W. E. Stevens is the architect, and the site is in Vale-road, adjoining the railway station.

Plymouth.—The committees appointed by the corporation and guardians of the poor have recommended the purchase of the old workhouse, with the view of erecting on the site a new guildhall, the present building not only being inconvenient, but inadequate in size to the requirements of the town.

Birmingham.—The sub-committee appointed at the recent committee-meeting of the Public Recreation Society here have taken the building known as the Midland Bakery, in Lichfield-street, at a cost of 50*l.* per annum. About 100*l.* will be required to fit it up, and its maintenance as a place of recreation will involve an annual expenditure of 150*l.* the whole of which must be provided by donations and subscriptions. Mr. W. Scholefield, M.P. and Mr. C. B. Adderley, M.P. have signified their desire to aid the movement by serving on the committee.

Liverpool.—The Liverpool and London Fire and Life Insurance Company intend erecting a handsome suite of offices, in High-street, uniform with the Townhall and the Exchange buildings, and designed by Professor Cockerell.

Manchester.—The contractors for the new Victoria Market, in Tommy-field, are rapidly proceeding with their work. The pillars and most of the girders have been got up, the woodwork of the roof is far advanced, and a good portion of the flagging and sewering of the area has been completed. It is confidently anticipated, says the local *Courier*, that the market will be ready for opening by Easter.

Alnmouth.—The funds for forming a road from Bilton Station to Alnmouth, and erecting a new bridge over the Alne at Alnmouth being inadequate, application has been made to the Duke of Northumberland, who has agreed to make up the deficiency, besides granting 3½ acres of land exclusive of the public road, if the committee will undertake to carry out and complete the road and bridge, as projected and estimated. The committee have been authorised to communicate with Mr. F. Charlton, as engineer, to endeavour to carry out the project, and to prepare plans and specifications.

ORGANS OF LARGE COMPASS.

IN the short notice of organs, printed in your number for Saturday last, there are a few mistakes which the writer,—Mr. W. Marshall,—will, I feel sure, forgive me for correcting. He says, "It is stated by Mr. Hopkins, that the organ in Westminster Abbey contains a 32 feet pipe (C C C C). I believe this is not the case. The organ at Exeter Hall, and the one at the Panopticon, in Leicester-square, are the only London organs embracing so large a compass." In reference to the above extract I would beg to assure Mr. Marshall, through the favour of your columns, that the Westminster Abbey organ *does* contain a pipe of the size in question (32 feet), and that the fact can be ascertained with more than the usual facility, inasmuch as the great pipe, duly labelled C C C C, lies on the choir screen, with its "long dimensions" entirely exposed to view. Moreover, the Exeter Hall organ does *not* contain a 32 feet pipe; its deepest sound being the F F F F note, produced from a pipe of 24 feet length, of which pitch and length of pipe other examples occur at St. George's Chapel, Windsor, and Chichester Cathedral. Mr. Marshall is quite right, however, in quoting Hill's magnificent organ at the Panopticon, as containing a pipe of the extreme dimensions mentioned above.

With regard to the Canterbury Cathedral organ, and the statement that "it was originally built for the Handel Commemoration, held in Westminster Abbey in 1791 (1784), and was afterwards purchased for the cathedral at Canterbury;"—the account written by Dr. Burney, and published in the year 1785, places the matter exactly the other way. The words of the learned musical historian are as follow:—"The excellent organ erected at the west end of the Abbey for the commemoration performances, was fabricated for the cathedral of Canterbury; but before its departure for the place of its destination, it was permitted to be opened in the capitol on this memorable occasion."

I hope you can spare room for these "facts and dates."

EDW. J. HOPKINS.

Having noticed in the *Builder* of last week an observation as to the organ in Westminster Abbey (p. 35), I beg to state the compass of the above instrument is—great organ C. C. C. 16 feet, pedal organ C. C. C. C. open diapason, 32 feet. These pipes were made by Mr. Hill, when he reconstructed and enlarged the organ in 1848. The position of the organ in Canterbury Cathedral is in the triforium, as stated by Mr. Marshall. The compass of the organ in Exeter Hall, is F. F. F. 13 feet, pedal organ C. C. C. 16 feet, the double diapason not extending below F. F. F. F. 26 feet. The organ in the Panoptican extends to C. C. C. C. 32 feet, and is by far the largest instrument in London, and, I believe, for balance of tone, and beauty of mechanism, not surpassed in the world. There are other organs in England of 32 feet compass besides those mentioned by Mr. Marshall.—T. C. LEWIS.

WIDTH OF STREETS AND ALLEYS IN THE METROPOLIS.

THE Metropolitan Board of Works, at a meeting on the 18th, passed the following resolution:—

"That every street, excepting any mews, must be of the width of 40 feet at the least; but if the buildings fronting any street be more than 40 feet high from the level of the street, then such street must be of a width equal at least to the height of the buildings above such level. That every alley and every mews must be of the width of 20 feet at the least, but if the buildings fronting any alley or to any mews be more than 20 feet high from the level of the alley or mews, then such alley or mews must be of a width equal at the least to the height of the buildings above such level. And with regard to every such alley in reference to the entrance thereof, every alley must have two entrances thereto, each being at the least the full width of the alley, and one of the two at the least open from the ground upwards. And with regard to both such streets and alleys, the aforesaid width is to be ascertained by measuring (at right angles to the course thereof) from front to front of the buildings on each side of such street or alley. The word 'street' to include every square, circus, crescent, street, road, place, row, mews, lane, or place along which carriages can pass, or are intended to pass; and that whether there be or be not, in addition to the carriage-way, a footway paved or otherwise. The word 'alley' to include any court, alley, passage, or other public place which can be used as a footway only. If any person offend in respect of the conditions, regulations, and directions contained in this bye-law, he shall be liable for all the penalties and forfeitures imposed by the Metropolis Building Act, 1855, 18th and 19th of Victoria, chap. 122, in respect of any buildings either built contrary to the provisions of the said Act, or without due notice to the surveyor appointed in pursuance of that Act to inspect such buildings."

It was ordered that this resolution be communicated to all the district surveyors, with the view to give it as much efficacy as possible.

THE NEW BUILDING ACT IN THE CITY.

RUINOUS BUILDINGS.—VAULTS BENEATH PUBLIC WAYS.

THE attention of the City Commissioners of Sewers, at a meeting on the 22nd inst. was drawn to a report from Mr. G. Smith, one of the district surveyors, respecting the premises, No. 3, Queen's Head-passage, Newgate-street, in a dangerous state, the commissioners being empowered, under the Metropolitan Building Act, to act in such matters. The question arose whether the commissioners should appoint their own surveyor, or, as had heretofore been the custom, direct the district surveyors to attend to business of that character. After some discussion, it was rightly agreed that the matter *should be referred to the district surveyor*, the commissioners deciding in accordance, as they conceived, with the terms of the 79th section of the Act, which is as follows:—

"Whenever it is made known to the commissioners, hereinafter named, that any structure (including, in such expression, any building, wall, or other structure, and anything affixed to, or projecting from any building, wall, or other structure) is in a dangerous state, such commissioners shall require a survey of such a

structure to be made by the district surveyor, or by some other competent surveyor; and it shall also be the duty of the district surveyor to make known to the said commissioners any information he may receive with respect to any structure being in such state as aforesaid."

At the same meeting, a report on the construction of vaults beneath public ways, by Mr. Haywood, was read, wherein the surveyor recommended,—

"That the walls and arches be built of good hard stock bricks set in mortar or cement, and that the walls and arches be at least one brick and a half in thickness.

That the springing walls be at right angles with, and the ends of the springing walls parallel with, the line of the frontage of the house.

That the top of each arch be at least 2 feet below the surface of the pavement.

That 10 feet measuring from the front line of the house to the extreme outer point of the brickwork of the end wall be the greatest projection granted in any street; but that in streets where the footway has not so great a projection as 10 feet, that the external face of the brickwork be only allowed to the line of curb of such footways.

That, where ovens are constructed with vaults, they be built entirely independent of the walls and arches, and the surface of the crown of the oven be at least 12 inches beneath the under side of the arches of the vault.

That the openings for coals be as near the house as possible, and be covered with chequered iron plates, not less than three-quarters of an inch thick, and not more than 12 inches diameter.

The principal alteration herein proposed is making the crown of the vaults 2 feet beneath the surface, instead of 12 inches, as by the existing regulations, and this amendment may prevent the formation of any additional serious obstacles to laying the mains of the gas, water, and other companies beneath the footways."

The consideration of this report was postponed till the next day of sitting.

DISTRICT BOARDS AND THEIR SURVEYORS.

HACKNEY.

SEEING in your last number strictures upon the conduct of the Hackney District Board, in the election of their surveyor, I beg to state that the information you have received is not correct.

A considerable number of the testimonials had been sent round to the members of the board, who had perused them at their own houses: the rest were not read publicly at the board, but two members had devoted a day and till eleven o'clock at night to peruse and arrange them. And one reason why they were not read publicly, was the simple impossibility of getting through them all without sitting all day and all night, and a part of the next day too, and when No. 28 had been read, no one would have remembered the relative merits of Nos. 1, 2, or 3.

But it was less necessary, because the names or merits of the applicants were generally more or less known. Most of them were architects of classic education, which the board did not require. Had Sir Charles Barry been a candidate, he would certainly have been rejected. There is scarcely anything but the sewers and the roads which would come under the surveyor's notice, and a practical man was required, who would go down into the sewers and see for himself, if required. Such a one, far before all the rest, is Mr. Lovegrove, who was elected, who has been 13 years an officer of the Commissioners of Sewers in the Tower Hamlets, and is perfectly conversant with every part of them. I may add that he has constructed an ingenious model in gutta percha of the whole, with their different levels through which the water flows as in the sewers themselves. He is a stranger to me, but I voted for him from a sense of duty.

The only point in which I think the Board erred, was to require that their surveyor should not do any other business. This I opposed unsuccessfully.

JAMES EDMESTON.

*** The report in question is nevertheless quite correct as respects the meeting of which it gives an account. We know nothing to the prejudice of the gentleman elected, but we must, for the sake of other boards who have not yet appointed their officers, object most strongly to the principle adopted by the Hackney Board, which, according to Mr. Edmeston's own statement, put aside some who were willing to undertake the duties of the office at the salary fixed, because they were "Architects of classic education," and would have led them to reject Sir Charles Barry, if he had been a candidate, in favour of some mere rule-of-thumb man willing to go down into the sewers! It is this erroneous and mischievous notion which is placing England in the rear of other countries.

THE DECORATION OF CARLISLE CATHEDRAL.

THERE has been a difference of opinion amongst the authorities as to the amount of coloured decorations to be bestowed on the restored roof of Carlisle Cathedral. The architect, Mr. Christian, proposed an exact restoration of the ancient painting; covering the entire ceiling with colour, emblazoning the shields, &c. and continuing the decoration to a certain extent upon the walls. The authorities, excepting one, wished for partial painting only, some more, some less; and to have the greater part of the oak stained only, but emblazoning the shields and gilding the foliated enrichments. Not being able to agree, it was arranged that Mr. Owen Jones should be called in. He was accordingly consulted, and the result is that the work will be *completely* done. The whole ceiling will be painted, and the suggestion made as to the decoration of the walls will be carried out. A few alterations in respect of colours and gilding, and the decoration of the panels, were suggested by Mr. Jones, in all of which the architect concurred, and the work is now in progress towards the full extent of desired enrichment. Mr. Wm. Brougham, who has taken much interest in the restoration, has furnished the exact emblazonments for all the shields from an old record in his possession. It is hoped the work when completed will be as nearly as possible a perfect restoration of the ancient ceiling.

THE STATUE OF CHARLES I. AT CHARING-CROSS.

MANY of our London readers have doubtless observed that the hoarding which for some time surrounded the equestrian statue of Charles I. has been taken down, and that the group now looks more upright and stable.

The great object of what was done to King Charles' statue was security. It had originally been fixed to a slab of black marble, which had become fractured, and been pieced with Portland stone. Sir Francis Chantrey had some measures taken a few years back for its greater security, but it was thought advisable recently to do something more decided. Accordingly, under the direction of Mr. Scott, the shattered slab has been taken out, and one of granite, a trifle thicker, inserted, first securing the stones which form the cornice by the insertion of a copper chain bound all round it below the granite slab. The slab itself is secured to the pedestal by copper bolts running into the stonework below, and the feet of the horse similarly are secured to the slab. As one foot is raised, the centre of gravity is very much on one side of the supports, so that there is a decided strain upon one of the feet, which were found to be very insecurely fastened. This has now been effectually remedied.

The work has been carried out by Mr. Thomas, with the help of Messrs. Baker and Mr. Potter. The improvement in appearance is very considerable.

PROPOSED ARCHITECTURAL COLLEGE.

I AM glad to find that some of your correspondents are in favour of an architectural college, the subject of which I brought before your readers at page 478 of the last volume. The main feature of such a college would be, the course of study necessary to prepare a pupil for the office. A diploma would not come within its reach. After the preliminary training at the college, and the due completion of the articles in an office, the candidate for a diploma would be qualified to go before the tribunal appointed for its issue, which should be "the Council of the Institute," to undergo the necessary examination, and upon the result of that ordeal alone should he be declared entitled or not to the coveted document.

A college would never cramp genius: no course of study could put out the fire of the intellect. A man may be a "*born genius*," but, unlike "*murder*," it will not always "*out*." To foster the latent talent for the fine arts, to bring out the constructive ability of the student, is, I think, the means whereby a college can answer its end. Should the student prove entirely unfit for the profession of architecture, then would he be debarred from entering upon its duties, inasmuch as a proper certificate of merit would be required, ere the "parents or guardians" could be in a position to *seek* for articles, much less sign them.

A *compulsory* examination, at the present day, would be an absurdity, a *voluntary* one, but very partially adopted. We must begin with this matter—say with our present pupils, whose "term" may be five years hence, and with those who may be now training for the same, with a mere A B C knowledge of the rudiments of geometry, &c.

The present "rule of thumb" principle is loudly objected to. A *new style of architecture* is said to be a consummation most devoutly to be desired. But the opponents of the one and the advocates of the other may depend upon this, that unless they put their shoulders to the wheel, the gods will not condescend to help them! They are the very parties whose duty it is (if they are *convinced* of its necessity) to arouse the profession from its slumbers, and to set in motion the Juggernaut car which shall crush beneath its wheels the spectres of *routine and red tape*. If architectural Reformers won't work, the Protectionists must quietly hold their own.

In the establishment of a college, we can only ensure one thing—a certain quantity or amount of knowledge which *may become* a store of thought. This even is all we can accomplish by office training. But this is much! If the regularly qualified student loses the gift of self-application,—if he thinks that mental labour has ceased when the parchment is transferred to his pocket, and that he knows all he is required to know—then will his preceding and preparatory training be like the food he has already physically consumed,—sufficient for his wants up to that period, but incompetent to support life when once the "supplies are stopped." Self-culture is required even to the hour of one's death. All we can do is simply to provide the *vehicle* whereby study may be pursued, teach the necessity of that pursuit, and, if possible, give a zest to it. Having done this, we have accomplished our task: the rank and name of an "Inigo," "Sir Christopher," "Wykeham," &c. are open to all, if they will but use the means, that the desired end may be attained.

It will, I hope, become evident, that a College, such as I have described, can but supply these means of advancement, the proper *use* of which can *alone* gain its possessor "respectability." W. W.

GAS.

THE half-yearly meeting of the City of London Gas Company, was held on Wednesday, in last week, when a dividend at the rate of two per cent. per annum, clear of income tax, was declared.——The town of Malvern has just been lighted up. The commissioners, under the Local Improvement Act, applied to Mr. J. H. Jones, of London, and, acting under his instructions, public tenders were called for, and the construction of the gas-works plant, mains, &c. was entrusted to Messrs. C. Walker and Sons, of Tipton. The buildings and dwelling-house were undertaken by Mr. G. M'Cann, of Malvern, sublet from Mr. Kerby, of Nottingham. The gas-holder is 48 feet in diameter, 22 feet 6 in. deep, and contains 40,000 cubic feet of gas. The total length of mains is nearly seven miles, which extend to North Malvern. The works are capable of supplying 56,000 feet of gas per day. The elevation of the town being so much greater than the site of the works, the gas is checked in its flow by valves in the roads. There are to be 100 public lamps. The buildings are of Elizabethan construction. On lighting the town for the first time, a dinner was given to the workmen by the contractors, inhabitants, and visitors.——At a numerous meeting held at Handsworth Woodhouse, according to the *Sheffield Independent*, to consider the question of lighting this populous village with gas, Mr. Hedley, gas engineer (introduced by Mr. Stainforth, architect), laid before the meeting plans and estimates of the entire cost of works, 1,500*l.* which it was resolved to raise in shares of 5*l.* each. ——If we rightly understand the resolutions which were passed by the Town Council, at their last meeting, says the *Liverpool Albion*, authority has been given to the gas committee of the council to propose to the gas company that their share property shall be converted into bonds, bearing a fair and equitable rate of interest, and that the undertaking shall henceforward be managed by a board of nine directors, three of whom shall be appointed by the council, three by the consumers of gas, and three by the bondholders; also, to propose to the gas company that immediate reduction be made in the price of gas; that the borough engineer shall have authority to test the gas and ascertain the pressure at which it is supplied; that the company consent to the appointment of meter-testers; and that the powers of the auditor be extended.——The Cleckheaton Gas Company have made a reduction to consumers in the price of gas, which, as now fixed, is 5*s.* per 1,000 feet.——At Bishop Auckland, a public meeting was held on Wednesday before last, when a resolution for the formation of a company, to consist

of gas consumers, was unanimously agreed to. It is intended to supply the consumers with gas at the rate of 4s. per 1,000 feet: 480 shares of 3*l.* each were subscribed for by those present.——Tenders for lighting with gas the New Union Workhouse, at Chester-le-Street, having been called for, nine tenders were given in, ranging from (Spence) 130*l.* to (Bailey) 83*l.* 8s. The quantities were supplied by Mr. M. Thompson, architect.——The South Shields Gas Company find it necessary to materially extend their works, and for that purpose they have advertised the issue of new shares.——There is talk of a new gas company at Lincoln, the gas at present supplied being considered bad in quality, and insufficient in quantity. The local *Chronicle*, however, says that as to quantity, it is not deficient, the company having just completed works which will enable them to supply a city twice the size of Lincoln; but as to quality, the badness is admitted. It is explained, however, as arising from the fact that the company have not yet increased the purifying power to the requirements of the new manufacturing power, although they intend to do so. The price of gas at Lincoln is 5s. per 1,000 cubic feet, and so soon as the new works are paid for, a reduction is to be made to 4s.

Position of Gas Pipes.—A correspondent, in your number of the 5th inst. recommends that gas pipes should be imbedded in the plaster-work of new houses while the work is being proceeded with. My own experience points to quite an opposite practice, and I recommend gas pipes to be laid so that they can be seen and examined at any time. If concealed in the plaster-work of a wall, what is to prevent the workmen who follow, or the future occupant, *driving a nail* right through the pipe? as I know to have been done. In the house occupied by myself I had the pipes almost entirely laid as above recommended, viz. under floors, behind skirtings, or *visible* alongside an architrave, &c.; yet, where, in one instance, a pipe was buried in a cornice (for 8 or 9 inches only) there was an escape of gas whereof the source could not be found for a twelvemonth, and when found the cornice had, of course, to be cut away to allow of the hole being stopped, and then made good again at some cost and annoyance. Were it more common to exhibit the pipes, it would probably be found not so very difficult to make them decorative as well as useful.

L. L.

Gas Stoves.—Our attention, says the *Bath Chronicle*, has been called to two cases in which gas stoves have ignited the wooden floors on which they were placed: in one case, the conflagration of the whole premises must have ensued if the mischief had not been discovered in time. We do not mention these facts for the purpose of discouraging the use of gas stoves: on the contrary, we consider them to be, when properly fixed, an admirable and very safe mode of warming houses. They ought, however, to be placed so as to render impossible the ignition of neighbouring wood, and this, we believe, may be best effected by fixing them on sufficiently thick slabs of stone. Iron plates, liable to be heated, and coming in contact with boards, always involve risk.

THE MASTERS IN TRAINING AT MARLBOROUGH HOUSE.

IT is, I believe, very generally known that all provincial schools of art are now supplied with masters from a training class established at the head school of science and art, Marlborough House. The success or failure of the present system of *universal art education* must, therefore, in a great part, depend upon the members of that institution.

An acquaintance with the character and government of the class must, then, be of importance to all interested in the establishment of local schools of art.

The following is the subject matter of an address delivered by the head master to the "masters in training" of the abovenamed school, on the 23rd of November last:—

"I have hitherto endeavoured to govern you on *high gentlemen principles*; but the ill success attending my efforts obliges me to institute what is less honourable to yourselves—the *factory system. Nor can you complain of this, as by your own conduct you have forfeited every claim to my consideration as gentlemen or men of honour.*"

Lest there should be any doubt as to the literal meaning of this animadversion, I beg to state that one member of the class, for presuming to question it, was, without being allowed any opportunity of appeal, summarily expelled.

Thus, having devoted both time and money to the acquirement of, not actual knowledge of art, but a particular application of it; having successfully passed his "stringent examinations" and obtained his certificates; having, in fact, done all that was required of him as a master, he is found unfit for that office because he will not conform to the *factory system*, or submit to be treated as a disorderly factory operative.

I leave it to others to decide what may be expected from an institution where artists are not gentlemen, and where men without honour may yet be intrusted with the entire government of our provincial schools of design.* * * *

PROPORTIONS OF IRON GIRDERS.

INSTITUTION OF CIVIL ENGINEERS.

ON the 15th inst. Mr. Robert Stephenson, M.P. president, in the chair, the paper read was "On the relative proportions of the top, bottom, and middle webs of Iron Girders and Tubes," by Mr. J. M. Heppel.

The object of the paper was the investigation of the forces to be resisted by the middle webs of girders.

The first part of the inquiry had reference to the case of a plate of metal, subjected to the action of various direct forces, some compressive and others tensile,—simultaneously applied to it, in different directions; and it was shown, that these might always be resolved into two principal resultants, which were invariably at right angles to each other, and by which the applied forces, however numerous, might be conceived to be replaced,—the condition of the plate being absolutely the same, whether considered as subject to the forces originally applied, or to their two principal resultants.

The next point was the consideration of the condition of a rectangular plate, held in equilibrium by lateral forces, applied in couples, uniformly distributed along its sides; and it was shown, that in this case, also, there were two principal resultants,—one tensile and the other compressile; that these two were of equal intensity, at right angles to each other, and at angles of 45° with the applied forces; moreover, that their intensity was exactly equal to that of the applied lateral forces.

It was next shown, that the middle web of a girder exposed to a load, at a given point, was exactly in the condition of the plate last considered, and a rule for the computation of its thickness was arrived at.

Other cases of the distribution of loads, both fixed and movable, were then considered, and rules for the corresponding thickness deduced.

The effect of the horizontal strains to which the middle web was subject was then considered, and an investigation was made of the magnitude and direction of the resultants, arising from their composition with the diagonal forces before considered.

Finally the increase to be made in the thickness of the middle web, beyond that already arrived at, in order to enable it to deal with these horizontal and diagonal strains, together, was investigated, and a rule was deduced for its definite determination.

The results arrived it were briefly these:—

Four different cases of distribution of the load being considered, and in the first instance the horizontal forces being left out of consideration, and the thicknesses determined with reference to the diagonal forces only.

These four cases were—

1. That in which the load was fixed and central.
2. That in which a load concentrated on a point, moved along from one end of the beam to the other, as the case of a concentrated rolling load.
3. That in which the load was fixed and uniformly distributed.
4. That in which a load uniformly distributed was drawn on from one end, or that of a distributed rolling load.

It was then shown, that in order to enable the middle web to deal with the diagonal strains, its thickness should be determined by the following methods:—

In the first case,—the fixed central load,—by making it of uniform thickness, and such that its horizontal section was equal in area to the central vertical sections.

In the other three cases, the thickness of the middle web, at the extremities, was twice that determined as above. In all of them it diminished towards the centre, but in each case according to a different law.

In the second case,—the concentrated rolling load,—the thickness varied as the distance from the more remote extremity.

In the third case,—the distributed fixed load,—the thickness varied as the distance from the centre.

In the fourth case,—the distributed rolling load,—the thickness varied as the square of the distance from the more remote extremity.

* The writer has forwarded his name: the responsibility of the statement must rest with him.

The cases of combinations of these kinds of loads was then considered, and it was shown, that by dividing the central vertical section into portions, proportional to the amount of each kind, and thence determining the thicknesses from the middle web for each kind, according to its own law,—the sums of the thicknesses, so determined, would give those necessary for dealing with the compound load.

The effect of the horizontal forces was next considered, and two cases were taken—first, that in which the section of the beam diminished from the centre towards the extremities, in the ratio of the rectangle of the segments of the length; in which case the horizontal forces were constant, or nearly so, throughout.

In this case it was shown, that the thicknesses, as before determined, with reference to the diagonal forces alone, should be trebled, in order to fit them to resist the resultants arising from their composition with the horizontal forces; and, as in all beams, where any variation whatever was made in the vertical section, it did, or should approximate to the above law. It was considered, that this rule should be taken as applicable to beams of variable section.

For beams of uniform section, it was shown, that the thickness of the middle web should be such that the horizontal section should be three times the vertical area.

The stiffening of the sides was then considered. It was argued, that as the efficiency of stiffening must, in some way, depend on the amount of area, compared with the amount of support applied to it, it might reasonably be supposed to be proportionate to a line which would form a web to the rectified periphery,—a rectangle equal to the area to be supported,—which line (borrowing a phrase from hydraulics) might be called "its mean radius." Reasons were then adduced for believing that stiffening pieces might, with safety, be so distributed as to leave the mean radius of the included spaces equal to seventy times the thickness of the plate, although, in most early structures, it would be found to be much less than what would result from such a calculation.

IMPROVEMENT AT ROTHERHAM.

THERE have just been completed on the Eastwood estate, Rotherham, Yorkshire, five new roads, of an aggregate length of nearly three miles, one 45 feet wide, and nearly a mile-and-a-half long; the others 40 feet wide, and walled on both sides. Sewering has also been put in. When the Earl of Effingham, who is the owner of a small piece of land, lying between the Eastwood estate and the town of Rotherham, makes the street already laid out to connect Bridge-gate and College-street, Rotherham, with the western terminus of Fitzwilliam-road, a new road to Doncaster will be opened, which will relieve the transit from two steep hills, nearly two miles in length.

The works we have mentioned have been done under the direction of Mr. Charles Rawson, surveyor. Mr. William Ellis was the contractor, and the cost was between 6,000*l.* and 7,000*l.*

On the Eastwood estate, within the last year, there have been erected, on 800 years, building leases, from the freeholder (Mr. T. S. Badger, Lincoln's-inn), ninety houses of different classes, from the designs of Mr. William Blackmoor, architect. A square of artisans' dwellings has been laid out. The size of the square (called Shaftesbury-square), is 375 feet by 95 feet, and its eastern and western sides have been already filled up by the erection of artisans' dwellings. The third side of the square has been let on building terms, and will be covered this year with houses. Near and on the north-western boundary of the Eastwood estate, there have been completed and brought into operation, the new works of "The Rotherham Patent Tire and Axle Company," who, at the outset, employ upwards of 200 fresh hands. The last-named works have been erected under the superintendence of Mr. Bramwell, civil engineer.

Further, there are now being erected by Messrs. Yates, Haywood, and Co. of the Effingham Works, Rotherham, from designs by Mr. Blackmoor, a set of additional buildings, about 550 feet in length, adjoining the old works. The cost of these will exceed 8,000*l.* It is also intended that the Rotherham Grammar School and master's residence shall be rebuilt, and designs have been advertised for in the *Builder*. The day for sending in plans is the 21st of February next.

IRON CHAPEL IN THE MILE-END ROAD.—Mr. John Walker, the builder of this chapel, wishes us to mention that it is now an absolute purchase, and that a large portion of the purchase money has been paid, but he has given twelve months' credit to the trustees for payment of the balance by instalments of £80 each every three months.

Notices of Books.

Analytical View of Newton's Principia. By Henry, Lord Brougham, F.R.S. and E. J. Routh, B.A. Longmans. 1855.

The great advance which has been made of late years in analytical geometry, and the ease with which problems in dynamics, formerly considered of great difficulty, can now be solved by aid of the "Differential Calculus," has caused the "Principia" to be thrown into the shade, and to be looked upon rather as a work to be read as a scientific curiosity than to be studied as a text-book by the aspirant after mathematical knowledge. Those, however, who are acquainted with the "Principia" are well aware that nearly all modern treatises on the higher branches of dynamics are indebted to that inimitable work for the basis of a large proportion of their investigations. Although the method of demonstration employed by Newton is similar to that used in Euclid's "Elements," and requires but a moderate knowledge of algebra, yet he is so concise in his reasoning that it requires careful and painful study to enable the student fully to enter into his arguments.

The work before us will prove a great help to those who desire fully to comprehend the beauty of Newton's theorems; and it also brings before the reader an account of the progress that has been made in the vast science of dynamics since the time of Newton. Lagrange, Laplace, the Bernouillis, Taylor, and many other great mathematicians have devoted their energies to extend the discoveries of Newton; and whilst many of their investigations have only tended to establish more firmly the great laws which he laid down, especially that of gravitation; yet, by aid of a more powerful analysis than Newton possessed, many problems have been solved which he attempted in vain. Among these we may mention the important problem in gunnery of finding the equation to the curve described by a projectile moving in a medium whose resistance varies as the square of the velocity, which can now, by aid of the "Calculus," be approximated to as nearly as we please. The motion of bodies in fluids generally has been taken up by Poisson, Challis, and others, and our knowledge thereon greatly extended of late years.

The "Analytical View" elucidates the great truths contained in the "Principia," shows the connection of its various parts, and simplifies many of the demonstrations, by making free use of algebra in place of the more abstruse synthetical form employed by Newton. The book possesses also much literary value, containing, as it does, a concise history of the principal discoveries which have been made since Newton's time respecting the laws which govern the motions of bodies, either in vacuo or in a resisting medium. Although the greater portion of the work requires a knowledge of the "Calculus" in any one who would thoroughly understand it, yet there is much information that the mere tyro in mathematics may gather respecting the great dynamical laws which prevail in the universe, and the nature of the proofs on which rest our knowledge of those laws.

VARIORUM.

Three very elegant "Addresses delivered at Manchester, Leeds, and Birmingham," by Earl Stanhope, have been published by Mr. Murray, of Albemarle-street. The first is on the Progress of Literature and Science; the second, on the Study of History; and the third, on the Antiquities and Works of Art at Rome. The first was delivered at the Manchester Athenæum, the second at the Leeds Mechanics' Institute, and the third at the Midland Institute, Birmingham. Science, history, and art are the respective subjects of these excellent discourses. In the lecture on art at Rome, Lord Stanhope urges the advantages to art students and to our manufacturing designs of having an English Academy at Rome; and so soon as peace is re-established, his lordship proposes to bring the question before the House of Lords. He was assured, he says, at Rome, that every European nation, with one exception, has now an academy of art there, or some equivalent or substitute for an academy,—that one exception being England. In respect to our artists at Rome, it is his opinion that Gibson bears the palm; yet he deprecates the colouring of his statues, and he hopes that, notwithstanding Gibson's example, "colouring in figures may be left to the doll-shops."——Amongst "Quarterlies," we may here point attention to the new issues of the *Edinburgh Review* and the *Quarterly Review*. In the latter is an interesting article on Landscape Gardening and the Picturesque, based on a review of Sir Uvedale Price's work "On the Picturesque," with Sir T. D. Lauder's essay "On the Origin of Taste," &c. "It is singular," says the reviewer, "that at the present time, when the taste for gardening is so widely diffused, few or no attempts have been made to illustrate the theory of the art which all are practising. Yet it cannot be said that the subject is exhausted. Our predecessors assuredly have left us no immutable standard for imitation; for, recent as is the revolution which they cried up as the triumph of refinement, we are now far advanced in a counter-revolution. The modern improver is replanting the avenue and replacing the mullions which his grandfather removed with universal applause; or in digging out his new *parterre* he excavates the foundations of his ancestor's terrace,—that very terrace which his predecessor levelled to make way for the curves and the sweeps which he was told would 'bring nature to the parlour windows;' and so far are the controversies of the last age from supplying us with any fixed principles for our future guidance, that, though many of the works to which they gave rise contain tasteful remarks and useful suggestions, their reasonings, for the most part, are grounded on a false hypothesis of the nature and character of the picturesque—an error which still survives to perplex our judgment and vitiate our practice." We may return to this article at greater length. In the *Edinburgh* we observe an article on the Isthmus of Suez question, which might be profitably read in connection with the article in our present impression on the same subject. The reviewer, however, does not look very favourably on the canal project. "The proposals for a canal," he says, "have not been entertained in this country, simply because it is known that the difficulties of execution are far beyond the estimates, and that it would neither shorten the passage to India nor materially facilitate the intercourse between the mother country and its dependencies. At the same time," he adds, "the English people are intensely interested in the completion of the railroad through Egypt. They know that a line of steam communication between the East and Europe is almost indispensable in the present day for the accommodation of passengers and the conveyance of mails and light goods; and they feel that no exertions should be spared to make the line as perfect as possible." So far as regards the canal project, the reviewer thinks that a Commercial Commission ought to have been the first to investigate the subject in association with others capable of judging of the difficulties of navigating the seas between Cape Gardafui and Gibraltar. "When they decide," he remarks, "that this route is easier and safer than that round the Cape, and consequently that, when the barrier of the isthmus is removed, the greater portion of the Indian trade will come this way; it will then be time enough to ask the engineers to give their opinion as to the feasibility of the project." Yet surely that passage which the reviewer points out as of so much importance as a steam line for passengers and mail traffic might, even by flat-bottoms or otherwise, be made quite as safe and easy for the general trade.——Under present circumstances, there are few who will not read with interest the Rev. T. Milner's new volume on "Russia; its Rise and Progress, Tragedies, and Revolutions" (Longman and Co.). It contains but the salient points in Russian history; but a condensed compilation such as this, made up of brief and popular sketches of the most prominent or leading subjects of interest in that history, strung together so as to preserve the thread of the whole, while dropping all its heavier or less interesting items, is just the sort of book for the general reader of the present busy time.

Miscellanea.

Lectures at Cardiff Art Exhibition.—Three lectures delivered in the Town Hall at Cardiff, during the art exhibition there, have been published by Mr. H. Bird, of Cardiff. The first is the inaugural lecture by Mr. H. A. Bruce, M.P; the second on poetry, by J. W. N. Crave, D.C.L; and the third on mechanical science, by Mr. H. Mackworth, C.E. government inspector of mines. The last contains some interesting statistics. "The rapid growth and prodigious magnitude of the cotton trade" is referred to as, "beyond question, the most extraordinary phenomenon of the age." In the year 1600, the finest wools were manufactured into what were called 'cottons.' Afterwards linen threads were used for the warp of a species of cloth, while the weft was of cotton. The spinning of cotton was a domestic manufacture in the last century; and in 1760, the value of the total production of cotton goods in Great Britain during the year amounted to 200,000*l*. In 1767, James Hargreaves, a carpenter of Blackburn, invented the spinning-jenny, by which at first 8 threads and afterwards 120 could be spun at the same time. The jenny could, however, only spin the weft. To supply the deficiencies of this machine, Sir Richard Arkwright invented his spinning-frame in 1785. A little later, Crompton brought out his mule jenny, a combination of Arkwright's water frame and the moveable jenny. "By way of comparison," says Mr. Mackworth, "we may take the amount of manual labour in producing the beautiful cotton fabrics of India, where it is considered an extraordinary effort for a man to spin one hank of thread per day. Now what are the results attained by machinery? One man in America can 'mind' a machine with 1,088 spindles, each producing 3 hanks per day, and giving 3,264 hanks as his day's work. The power loom was invented by the Rev. Mr. Cartwright. One girl in the cotton mills of Holyoke, in the United States, can weave, on four of these looms, 100 yards of yarn per day. The straps of some of the wheels used at these mills run at a speed of more than a mile a minute. In English factories the progress has been nearly as rapid, and on a still larger scale. In 1835, 350,000 persons were employed in them to work 115,000 looms, while in 1850 there were 600,000 persons to 298,000 looms, many of them capable of doing double work." A catalogue of the works of art, models, natural curiosities, and manufactures, &c. in the exhibition, has been also published, uniform with the lectures, which are copyright.

The Metropolitan Board of Works. — The Board met on the 18th inst. at Burlington House, to elect their secretary,—or clerk, as they seem resolved to call him, — one cannot well see why, unless to diminish his status, as well as his authority, as their representative and exponent. After a good deal of discussion as to how the thirty-one candidates ought to be disposed of, the number was reduced to six; and at length Mr. Woolrych, the late secretary to the Metropolitan Sewers Commissioners, was elected by 23 against 19 in favour of Mr. Josiah Wilkinson. On a subsequent formal motion, that Mr. Woolrych be appointed to the office, 34 of the members out of 45 voted in his favour. Mr. Hall afterwards intimated an intention to move before the Bye-law Committee, "That no member be eligible for any office of emolument in the gift of the Board." Major Lyon moved the adoption of regulations as to the width of streets and alleys, which we elsewhere speak of in our present impression.

The Road through St. James's Park.—On Saturday, 19th, several of the residents in the immediate vicinity of St. James's Park, had an interview by appointment with Sir George Grey at the Home Office, relative to the contemplated road across the inclosure of St. James's Park. Mr. Keating stated in detail, on the part of the gentlemen present, the strong objections entertained by the inhabitants in the neighbourhood and the public generally to any encroachment upon the inclosure of the park, the source of so much enjoyment to so many of their families and the public at large, and asked to be informed whether the interference apprehended had been resolved upon by her Majesty's Government, or whether it was still open to those interested in the public convenience to remonstrate against it? Sir George Grey said, in answer, that the necessity for increased accommodation to the public, caused by the present inconvenient approach to the park through the Stable-yard, had engaged the attention of the Government; that several plans had been suggested at different times, including that to which reference had been made, in order to obviate the inconvenience complained of, but that up to the present time no plan had been decided on; that there would be full opportunity given for the discussion of those plans, and ample time for objecting to any of them; and that the preparation of the plans did not imply any foregone conclusion on the part of the Government.

SUFFOLK INSTITUTE OF ARCHÆOLOGY.—The quarterly general meeting of members and friends of this institution was held on the 10th instant, at the Athenæum, Bury, and was numerously attended. The Rev. Lord Arthur Hervey, the President, having taken the chair, invited the company, among whom were Lady Arthur Hervey and many other ladies, to visit the several objects of interest set forth in the programme. At the house of Mr. Kilner, in Guildhall-street, the party inspected a Norman doorway, circular-headed light, and pointed arch in the west wall of the house, and other objects of interest. The company then proceeded to the butter market, where, in the house occupied by the bank of Messrs. Harveys and Hudson, they were permitted to examine an enriched panelled ceiling, in good preservation, of the time of Henry VIII. At the house of Mr. Ridley, in Eastgate-street, some carved oak beams, resembling those in the aisle roofs of St. James's Church, and an original external window in a perfect state, of the period of the fifteenth century, were seen. A specimen of external decoration of the same period, preserved in the shoe-shop of Mr. Goodwin at the end of Mustow-street, was also inspected. On the return to the Athenæum, several communications were read, and it was announced that in the course of the works going on in the restoration of Rougham Church, a representation of the Day of Judgment had been brought to light, painted on the walls in the accustomed place above and on the sides of the chancel arch. It is in good preservation. Mr. G. R. Corner, F.S.A. communicated a list of manors and places in the county of Suffolk, fifty-four in all, in which the customary descent is to the youngest son. Various other communications were made, and documents, coins, and other objects of archæological interest, exhibited.

SARCOPHAGI.—At a meeting of the Syro-Egyptian Society, held on the 8th instant, according to the *Literary Gazette*, the Rev. Dr. Hewlett read a memoir on Egyptian Sarcophagi. The rev. gentleman described the various modes of interment in Egypt, the different kinds of sarcophagi, and the different descriptions of rock out of which they have been hewn. The frequent occurrence of the oval ring, the emblem of royalty, he argued, would tend to show that the stone sarcophagi were destined exclusively for kings. He then entered into details concerning the history of certain well-known sarcophagi, more especially the one in which Alexander's body was supposed to have been laid. Many of the existing sarcophagi, he thought, might have been removed from recesses in tombs and pyramids where travellers have deplored not finding any. He concluded by suggesting that the sarcophagi already discovered, and now distributed among the museums of Europe, might be made to furnish a clue to the history of the kings of Egypt. The venerable Archdeacon Raymond, Mr. W. H. Black, and other gentlemen, made some remarks upon the origin of the word sarcophagus—a Roman word, with Greek derivatives—which conveys an erroneous idea of the nature of the stone chests, or coffins, in which bodies were formerly deposited.

THAMES ESPLANADE AND RAILWAY.—The plans and model of this scheme, which, as already mentioned, includes the embankment of the Thames—the clearage of the sewage of London—a direct road for carriages and pedestrians on the north side of the river between London-bridge and Westminster—a railway throughout the same route—and a communication on the south side between the South-Western and the South-Eastern Railways, have been submitted to Prince Albert.

THE NEW STREET FROM THE LONDON DOCKS TO SHOREDITCH.—Notices of removal have been served upon the occupiers of the few remaining buildings that stand in the line of the new street, which has been completed, the gas and water laid on, the main sewer and side drains constructed, and the carriage-road and side-ways paved from Whitechapel to Fleur-de-lis-street, Shoreditch, and there now remain a few houses to pull down in order to throw the thoroughfare open for public traffic.

SINKING OF A PORTION OF THE DUNDALK AND ENNISKILLEN LINE OF RAILWAY.—Near Castleblaney a portion of this line—about 30 yards—has sunk, says the *Newry Examiner*, and, in a manner, disappeared. Sir John M'Neill is the engineer.

HALIFAX BOROUGH ENGINEERSHIP.—On the 14th instant, this appointment, together with the surveyorship of the local board of health, was conferred upon Mr. G. W. Stevenson, lately of the firm of Lee and Stevenson, of London. There were fifty-six candidates for the appointment, three only, however, being presented to the council for their selection of one of the number. These gentleman were Mr. Laing, town surveyor of Great Yarmouth; Mr. Tebbutt, town surveyor of Loughborough, and Mr. Stevenson. No personal canvas had been allowed.

YARMOUTH TOWN SURVEYORSHIP.—The vacant surveyorship of this town has been the source of severe labour to the sub-committee appointed to examine the applications for the office. Although the salary offered is only 150*l.* inclusive of everything, there were no less than sixty-seven applications, from which the committee at first selected thirteen, and subsequently, after examining the testimonials, they still further reduced this number to the following, in the order of preference: A. Mr. Herepath, B. Mr. Colbran, C. Mr. Dalton, D. Mr. Angell. The council, it appears, will have to decide amongst these gentlemen, as the sub-committee cannot agree to recommend any one of them in particular.

IRON ROADWAYS IN LONDON.—The City Sewers Commissioners last year resolved, on the recommendation of their surveyor, Mr. Haywood, to give a trial to an iron roadway, on a plan patented by General Knapp, an American. The road-laying was commenced in Leadenhall-street on Wednesday, in last week, by the contractors, Messrs. Crook and Son; Messrs. Ransomes and Sims, of Ipswich, being the founders. The pavement will consist of circular cast-iron rings, about 12 inches in diameter, and 6 inches deep, divided into seven compartments, one in the centre, and six surrounding it, rendering these apertures sufficiently small to prevent the catching of the hoof of a horse. The upper edge of the ring, and all the partitions, are thickly indented with semicircular depressions, about an inch in depth. A projecting hub on one side the ring, and a corresponding depression on the other, fit together, and thus lock the whole roadway into one solid framework. The indentations, with the gravel filling the whole to the surface, secure a foot-hold for the horse.

CROWNS OF OVENS.—The great inconvenience to public traffic arising from their defective construction, and constant renewal, might, it appears to me, be altogether obviated by the thickness of the arch being increased, and Stourbridge bricks and loam used in place of, as at present, any rubbish—place bricks, commonly, and mortar which perishes on the application of heat.—A SURVEYOR.

METROPOLITAN MANAGEMENT: ST. GEORGE'S, HANOVER-SQUARE.—At the first general meeting of this parish, convened under the Metropolitan Local Management Act, the attendance of vestrymen was somewhat numerous. At this meeting a discussion took place upon a notice of motion given by Mr. John Leslie, to the effect that the powers and duties vested in the vestry in relation to the sewage and drainage of the parish be transferred to the Metropolitan Board of Works. To this an amendment was proposed by Mr. Ryde and seconded by Mr. Westerton, that it was not expedient to consider such a proposition until they should have had further experience of the manner in which the Metropolitan Board of Works discharged its duties. This amendment was ultimately carried. A motion was passed to the effect that a committee be appointed to take the temporary management of the sewers, and to report to the vestry as to the staff of officers that would be necessary.

DWELLINGS OF THE LABOURING CLASSES.—The report of the inspector of dwellings, presented at the last committee meeting of the Society for Improving the Condition of the Labouring Classes, says:—"The lodging-houses are in a satisfactory state. The health and conduct of the inmates still continue all that could be desired. The average number of inmates in each establishment is as follows:—In the George-street house, ninety-seven; and in the Hattongarden chambers, fifty-three weekly. The Charles-street and King-street houses, respectively, eighty-one and twenty-three nightly lodgers. The family houses in Streatham-street, Model-buildings, and Portpool-lane, are quite full. In the single women's rooms, at Portpool-lane, there are six empty out of sixty-four; and at Wild-court there are ten empty rooms out of 108. At Portpool-lane there are sixty-six females occupying fifty-eight rooms, fifty-eight single and eight double. The health of all the tenants in the society's family houses has been most satisfactory."

BAHIA.—At the Brazilian port of Bahia, or S. Salvador, a patent slip is about to be formed, on a plan by Mr. H. Law, C.E. and of such magnitude and power as will take up the largest transatlantic steamer, without discharging either coals or cargo, and with a number of other facilities, which will render it a complete dockyard, where building and repairing ships and machinery will be carried out on a large scale. The length of the slip will be 900 feet, 500 feet of which will be dry at low water. At the extreme end of the slip there will be 21 feet of water. Jetties, running out 1,000 feet, will be erected, and so constructed as to afford facilities for many vessels to discharge cargoes, and embark and disembark passengers, receive coal, &c. This enterprise, by last news, was to be forthwith commenced, and it is to be finished in eighteen months' time at furthest. When this project is completed, Bahia will become a port of great importance.

ROBBERY AT THE NEW WESTMINSTER-BRIDGE WORKS.—On 15th inst. a labourer, Samuel Sartain, was sentenced at Southwark Police-court to six months' hard labour at the House of Correction, for stealing rope, sacking, canvas, and tools, from the Westminster-bridge works, where he had been employed.

PUBLIC PARK AND MUSEUM, AT SALTLEY.—Some months since, Mr. C. B. Adderley, M.P. offered to set aside ten acres of land on his estate at Saltley, for the purpose of a park and recreation-ground, open to the public. Active steps are about to be taken to render the offer available. It has been decided to form a Working-man's Park Association, the members of which are to elect a committee and take the management of the park into their own hands. Besides the ten acres there is a large quantity of land reserved all round for building purposes, but until built upon it will form the play-ground. Mr. Adderley intends to erect at the principal entrance a museum and reading-room, at a cost of 1,800*l.* The admission to the park will be free, but a small charge will be made to visitors to the museum.

TENDERS

For building offices in Mark-lane, for Mr. James Pursell. Mr. N. T. Randall, architect:—

	Front finished in cement above ground floor.	Extra in Portland stone.
Wm. Cubitt and Co.	£9,326	£685
Hayward and Nixon	8,976	670
Haynes and Eyre	8,940	730
Piper and Son	8,895	715
Ashby and Horner	8,870	700
Lucas, Brothers (accepted)	8,795	658

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE TO SUBSCRIBERS.—A title-page in colours for the last volume may be obtained *gratis*, on personal application at the Office, by those who prefer it to that which accompanied the index in the closing number. Covers for the volume may be obtained at the Office, price 3*s.* 6*d.* or the publisher will bind it for 3*s.* 6*d.* The complete volume may be obtained, price 21*s.*

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

Third Edition.

THE BUILDER'S FRIEND,
Price One Shilling.
Office of "The Builder," and of all Booksellers.

Just Published, price 3*s.* the Second Edition of the

AUTOBIOGRAPHY of a BEGGAR BOY.—"In this little volume there is much that is really new to the general reader, and a great deal that is instructive and entertaining." "Here is the story of what the writer truly calls a 'chequered life,' told in simple but almost graphic style, showing traces indeed of the peculiar education of the boy, but not less honourable to the laudable, though often misdirected, ambition of the man." "Glimpses of real feeling and earnest thought are to be found in this singular story." "It is written in a series of letters, and this gives a freedom to the style which the writer evidently knew how to appreciate."
London: W. TWEEDIE, 337, Strand.

WOOLRYCH'S METROPOLITAN BUILDING ACT.
This day is published, in 12mo. price 5*s.* boards,

THE METROPOLITAN BUILDING ACT, 18 & 19 Vic. c. 122; together with such Clauses of the 18 & 19 Vic. c. 120, the Metropolis Local Management Act, as more particularly relate to the Building Act: with Notes, a Glossary of Architectural Terms, and full Index.
By HUMPHERY WILLIAM WOOLRYCH, Serjeant at Law.
London: STEVENS and NORTON, H. SWEET, and W. MAXWELL.

On the 31st inst. will be published, No. 2, price One Shilling, of

THE POPULAR HISTORY of ENGLAND: an Illustrated History of Society and Government from the earliest period to our own times.
By CHARLES KNIGHT.
The Popular History of England will be beautifully printed in medium octavo,—illustrated with about 1,000 wood engravings,—and will be divided into thirty-six monthly parts.
London: BRADBURY and EVANS, 11, Bouverie-street.

On the 31st inst. will be published, price 2*s.* Part I. of the

CYCLOPÆDIA of BIOGRAPHY; being the commencement of the THIRD DIVISION of the "ENGLISH CYCLOPÆDIA,"
Conducted by CHARLES KNIGHT.
The publication will continue in Weekly Numbers and Monthly Parts, and the Division will be complete in Four Volumes, early in 1857.
BRADBURY and EVANS, 11, Bouverie-street.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DEED, and WRITING BOXES, with their sizes, fittings, and prices, will be sent by post on receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's-churchyard, London.

Just published.

A POPULAR TREATISE on the WARMING and VENTILATION of BUILDINGS: showing the advantage of the improved system of heated water circulation.
By CHARLES JAMES RICHARDSON,
Fellow of the Royal Institute of British Architects, Consulting Engineer for Warming and Ventilating Buildings.
Illustrated with Seventeen Plates. Third Edition.
London: JOHN WEALE, Architectural Library, 59, High Holborn.
Price 7s. 6d.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for January, 1856, is now ready Price 1s.
London: HENRY GEORGE WARREN, 2, Red-lion court, Fleet-street; and GEORGE RUTTLEDGE and Co. Farringdon-street.

ARTICLED PUPIL WANTED, in the Office of an Architect and Surveyor, at the West-end of London, of extensive practice, and holding two public appointments. Premium no object.—Apply (by letter), to A. B. Mr. Woodwell's, 62, Berners-street, Oxford street.

A VACANCY for a PUPIL in the Offices of a firm of ARCHITECTS in the country, holding public appointments.—Apply to A L Z Post office, Cheltenham

AGENT WANTED in the IRON TRADE. A respectable person, well connected amongst consumers and purchasers of bar and pig iron in London and the neighbourhood, reference can easily be given amongst the engineers on the River, is wanted to represent an ironwork in the north of England. Apply (prepaid), with references, &c. to Box 44, Post-office, Hull

GASFITTER.—WANTED, a Gasfitter, who also understands Bellhanging. The strictest references required.—Apply, post-paid, to E. B No. 5 Box, Hungerford-hall.

TO SURVEYORS, BUILDERS, AND ESTATE AGENTS' CLERKS.

TWO competent Persons may hear of SITUATIONS to MANAGE BUILDING ESTATES, at salaries of 140l. a year to commence.—Apply enclosing stamp for reply) to ZETA, 36, New street, Dodsworth-grove, Kensington.
N.B.—A trifling consideration will be expected for the introduction

TO BUILDERS' FOREMEN, BRICKWORK INSPECTORS, AND OTHERS.

WANTED, a Man who thoroughly understands lime and brickwork generally, to INSPECT the CONSTRUCTION of CULVERTS, STATIONS, &c. and make himself otherwise useful.—Apply by letter to A. B care of Mr. Ashworth, Stationer, Spalding, Lincolnshire. The applicant must state his age, salary expected, also the name and address of his last employer.

WANTED, an AGENT, on Commission, for the SALE of SAW-MILL MACHINERY, DERRICK CRANES, &c. for a Scotch engineering house.—Applicants may address to S. T. Post-office, Glasgow.—References required.

TO CARPENTERS.

WANTED, an OUT-DOOR FOREMAN, who thoroughly understands fixing.—Write to E. B. No. 5 Box, Hungerford hall, stating former employment.

TO MASTER PAINTERS.

WANTED, by a Young Man, CONSTANT EMPLOYMENT as GRAINER. One who has served his time to the graining, and is willing to fill up his time at Painting and Glazing.—Address, H. R. 2, Cottage-row, near the Cottage of Content, Walworth, London.

WANTED, by a steady persevering Young Man, a SITUATION as BOOK or TIME-KEEPER. Can produce excellent testimonials. A small salary would be accepted.—Address, prepaid, W. B. Mr. Fachney, Plumber, 26, Stangate, Lambeth.

WANTED, to place a Youth, 16 years of age, as an IN-DOOR APPRENTICE to a respectable business. A carpenter's would be preferred. Apply upon or before given.—Address, E. T. 2, Dove-row, Goldsmith-row, Hackney-road, London.

WANTED, by a person of considerable experience, a RE-ENGAGEMENT as BUILDERS' FOREMAN. Good reference as to ability, integrity, &c. can be given. Locality no object. Address, E. R No 3, Francis street, Tottenham-court road

WANTED, by the Advertiser, who is a thoroughly practical man, a RE-ENGAGEMENT, as GENERAL FOREMAN, or CLERK of WORKS. He is well acquainted with the several branches of the building trade, can take out quantities, measure up work, and is well versed in accounts and bookkeeping, and the general routine of a builder's office. References of distinction as to ability and decision of character.—Address to C. B. 1, Beaufort-terrace, Southend-lane, Peckham-rye, Surrey

TO ARCHITECTS, BUILDERS, AND OTHERS.

WANTED, a RE-ENGAGEMENT, as CLERK of WORKS, GENERAL or SHOP FOREMAN, by a thoroughly practical carpenter and joiner, with good testimonials as to reference. Country not objected to. Address, J. E. Office of "The Builder."

WANTED, by an experienced, middle-aged Man, permanent EMPLOYMENT in the PAPERING, DECORATING, and PAINTING TRADE. Wages not so much an object as permanency.—Address, C. W. B. 3, Alfred-place, Old Kent-road.

TO TIMBER MERCHANTS.

WANTED, in a YARD, a SITUATION, by a party having a thorough knowledge of the English and Foreign wholesale and retail timber trade, and book-keeping. No objection to country. Unexceptionable references. Address, GILBERT, BROTHERS, Gracechurch-street.

TO IRONFOUNDERS, ENGINEERS, &c.

WANTED, by a respectable Young Man, of considerable experience, a SITUATION as MANAGING or CONFIDENTIAL CLERK. Has no objection to the country, and can give satisfactory references.—Address, A. E. 19, Old Bailey.

TO BUILDERS AND OTHERS.

WANTED, by a practical and experienced Man, a SITUATION as GENERAL or SHOP FOREMAN of Carpenters and Joiners, or a permanent situation where one is required. Has no objection to the country.—Address, J. R. Office of "The Builder."

TO JOINERS AND CABINETMAKERS.

WANTED, to APPRENTICE a LAD, fifteen years of age, in-door. Country preferred. Premium given. Address, H. R. 8, King-street, Holborn

WANTED, by the Advertiser, a SITUATION as GRAINER, PAINTER, and GENERAL ASSISTANT. Specimens on every wood on hand. Wages low. Address, A. B. 3, Rutland-street East, Stepney.

TO ARCHITECTS.

WANTED, a SITUATION in an Architect's Office, as ASSISTANT, by a gentleman who has just left a similar engagement in a London office. He is a good and expeditious draughtsman, understands details to some extent, is acquainted with design in both styles, and has been in the habit of directing works. He has also had some experience in specifications and quantities. Good testimonials.—Address, B. C. Office of "The Builder."

TO BUILDERS

WANTED, a SITUATION, as SHOP or GENERAL FOREMAN, by an experienced Man. Satisfactory references and testimonials. Address, J. D. 81, Lower-marsh, Lambeth

TO BUILDERS AND OTHERS.

WANTED, by a respectable Young Man, who has been some years in a Builder's Office, a SITUATION as CLERK in a Builder's or any other Office connected with the building trade. Can be well recommended by his late employers. Salary not so much an object as a lengthened engagement.—Address, prepaid, to D. C. 16, Elizabeth-place, Ball's-pond-road, Islington.

WANTED, to PLACE OUT a YOUTH, aged 16, to the trade of CARPENTER, as IN-DOOR APPRENTICE. The country preferred.—Address, stating terms, to A. B. 4, Charles-street, Grosvenor-square, London.

WANTED to APPRENTICE, for five years, a stout, respectable YOUTH, to the trade of a SMITH and BELLHANGER. Having been accustomed to the work, but a small premium will be given for in-doors; if out-doors, his services for first year will be considered an equivalent.—Address, Mr. TURNER, 12, Kingsgate-street, Holborn

TO NOBLEMEN AND OWNERS OF ESTATES.

WANTED, a SITUATION as STEWARD or AGENT, to improve old and erect new farm buildings, cottages, &c. or to have the entire management of an estate. The advertiser is forty-five years of age, has good practical experience in the management of buildings, and is well acquainted with measuring, estimating, and keeping accounts. Can be highly recommended, and security given, if required.—Address, B. A. Post-office, Newport, Isle of Wight.

TO CARPENTERS AND JOINERS.

WANTED to place, as an IN-DOOR APPRENTICE, a Youth, 15 years of age, to the above business.—Application to be made, stating all particulars as to premium required, &c. to Mr. MARGETTS, Hatton, near Hounslow, Middlesex

TO WRITERS, BREWERS' DECORATORS, &c.

WANTED, by an experienced Young Man, under 30 years of age, a SITUATION as WRITER, GILDER, and PENCIL HAND.—Address, Mr. ESSEY, 28, Goldington street, Oakley-square, Camden town.

WANTED, a SITUATION as FOREMAN or CLERK of WORKS, the advertiser having just completed a Government contract. Country preferred. Satisfactory reference given as to character and ability.—Address, J. H. Office of "The Builder."

WANTED, a permanent SITUATION in town or country, by a Young Man, aged 28, as PLUMBER. Can fill his time up in Painting and Glazing.—Address, M. No. 15, Chandos street, Covent garden

TO MASONS, DIRECTORS OF CEMETERIES, &c.

WANTED, by the Advertiser, a SITUATION as LETTER-CUTTER, ORNAMENTAL WRITER, &c. and MONUMENTAL MASON, and to make himself generally useful. Is a good artistic draughtsman and colourist.—Address, M. S. 6, Evans street, Upper North-street, Poplar, London.

TO ARCHITECTS OR BUILDERS.

THE Advertiser, who has been more than six years in the Profession, seeks an ENGAGEMENT, in town or country, in the Office of an influential Architect or Builder, where he may meet with opportunities for improvement and practice; or offers his services in preparing and colouring perspectives.—Salary from 30s. to 20s. per week.—Address PHIDIAS, Messrs. Ward and Co.'s, Publishers, Paternoster-row, London.

TO THE IRON AND METAL TRADES.

THE Advertiser, being connected with some of the best houses in the iron trade and having commodious offices and warehouses in the City of London is OPEN to NEGOCIATE with a respectable MANUFACTURING HOUSE, to represent them as Agent, or otherwise. The most respectable references given and required.—Address, A. B. 17, King-street, Finsbury-square, London.

TO ARCHITECTS.—The Advertiser, who has been four years in an Architect's Office, and can produce satisfactory testimonials as to character and ability, is desirous of an ENGAGEMENT. Address, A. B 8, Thornhill-crescent, Islington

TO ARCHITECTS.

THE Advertiser, who is a first-rate Draughtsman, and has a thorough knowledge of detail and construction, is open to an ENGAGEMENT.—Address, G. G. No. 39, Michael's place, Brompt n.

TO ARCHITECTS AND BUILDERS.

THE Advertiser, a Practical Man, is in want of a RE-ENGAGEMENT as CLERK of WORKS, or GENERAL FOREMAN. Has had the superintendence of extensive works in town and country. Reference undeniable.—Address, O. Z. Office of "The Builder."

TO BUILDERS.

THE Advertiser, a middle-aged Man, and a first-rate bench hand, wishes for an ENGAGEMENT as SHOP FOREMAN; well understands setting out drawing-boards, and has had good experience in all first-class joiners' work. Good references given as to ability and character. No objection to the country.—Address to F. J. 19, Warner-place, Hackney-road.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, aged 34, is desirous for an ENGAGEMENT. Has had considerable experience in preparing drawings, writing out specifications, estimating, measuring, and valuing work, and the routine generally. Terms moderate.—Address, X. Z 64, Long-lane, Smithfield, London.

TO ARCHITECTS, ENGINEERS &c

THE Advertiser, aged 19, has been in the above profession five years, and wishes for an ENGAGEMENT. Salary no object.—Address, H. L. Cook's Place, Notting-hill

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

TEMPORARY ASSISTANCE afforded to the above in making out or copying Plans, Specifications, Estimates, &c. Terms exceed 30s. moderate. Address, G. S. S., 6, Exmouth-street, Clerkenwell

LEAD-WORKER in GLASS.—A first-class Lead-worker and Designer wishes for an ENGAGEMENT in Ancient or Modern Style of Glazing.—Apply, post-paid, to T. STURT, Post office, Surbiton, Kingston, Surrey.
N.B. Decorative Painter as well.

TO ARCHITECTS.

AN experienced CLERK of WORKS is OPEN to an ENGAGEMENT.—Address, A. B. Mr. Burgess's, 5, Wansford-place, Oakley-square.

TO CONTRACTORS AND OTHERS.

A YOUNG MAN, with fifteen years' practical experience in taking out quantities, measuring up work, making finished and working drawings, together with superintending, is OPEN to an ENGAGEMENT as Clerk of Works, or to take the Management of a Business, which office he is now fulfilling in one of the leading firms. Testimonials as to ability, &c. present and former employers.—Address, A. S. 14, Thornhill-place, Caledonian-road, Islington.—Country not objected to.

TO BUILDERS AND CONTRACTORS.

AN efficient Measurer, Estimator, and Builder's Accountant, of twenty years' practical experience, in all works connected with building operations, is desirous of a RE-ENGAGEMENT, upon reasonable terms. Testimonials from builders and architects.—Address, H. L. Office of "The Builder."

TO BUILDERS AND OTHERS.

A PRACTICAL SURVEYOR offers his ASSISTANCE in measuring, estimating, or the making up of builders' accounts. Terms moderate and per agreement.—Address, X. Y. Office of "The Builder"

TO BUILDERS AND OTHERS.

AS FOREMAN of CARPENTERS and JOINERS, or MANAGER of GENERAL WORKS. Satisfactory references can be given.—Address, prepaid, J. L. 18, Bridge-avenue, Hammersmith.

TO CARPENTERS AND BUILDERS.

A RESPECTABLE YOUNG MAN, lately engaged as out-door under-foreman on a Government contract, wants a SITUATION as UNDER-FOREMAN, or otherwise. He is acquainted with the routine of an office, measuring, &c. and can work at the bench. Moderate wages accepted, if good opportunities for improvement. Can be recommended by last employer. Town or country.—Address, T. C. Post-office, Edmonton

TO NOBLEMEN AND GENTLEMEN, PROPRIETORS OF ESTATES

A YOUNG MAN, a SURVEYOR and BUILDER, solicits an ENGAGEMENT as AGENT, to superintend erections and general repairs, collect rents, &c. Security given. Satisfactory testimonials and references may be relied on.—Address, A. B. 5, George-terrace, West-street, Croydon

A GOOD PLUMBER, and one who can turn his hand to painting and glazing, can find CONSTANT EMPLOYMENT by applying to Mr. G. BAKER, Great Bookham, Surrey.

TO BUILDERS.

AS MANAGER of a large JOBBING BUSINESS, or PRINCIPAL CLERK, the Advertiser OFFERS his SERVICES, being thoroughly conversant with the duties of either office. The most satisfactory references will be given and testimonials produced, and security if required.—Address, A. B. Retreat Cottage, Dorking, Surrey.

TO ARCHITECTS, &c.

A GENTLEMAN, who is now disengaged, would be glad to meet with an Architect who requires an ASSISTANT, to undertake the management of his Office. Is well acquainted with the Gothic and Italian styles of architecture, can design well, and is a good draughtsman. An engagement where he would be able influentially to join the principal would be preferred.—Address, Q. E. D. 51, Sydney-street, Brompton

A CLERK of WORKS, who is practically acquainted with the different branches, and has just completed extensive works, is open to a RE-ENGAGEMENT.—Address, X. L. 16, St. Swithin's-lane, Cannon-street, City.

A YOUNG MAN is desirous of a RE-ENGAGEMENT in a Builder's Office, who has filled a similar situation with London Builders for seven years. References unexceptionable.—Address, A. B. Brown's-lodge, Woodvale, Forrest-hill.

TO ARCHITECTS AND BUILDERS.

A SURVEYOR of much experience is desirous of EMPLOYMENT in the office, to make finished or working plans, take out quantities, make estimates, or attend on the works. Has a practical knowledge of the business. Satisfactory references given. Age 43.—Address, A. P. 3, Claremont-place, Hornsey-road, Holloway

TO SURVEYORS AND BUILDERS.

A YOUNG MAN, aged 26, wishes for an ENGAGEMENT as FOREMAN of BRICKLAYERS. Thoroughly understands his trade. Can measure any description of work, and make working drawings. Good references can be given.—Address, J. R. S. Achilles Insurance Office, Cannon-street, City.

TO BUILDERS, &c.

A THOROUGH BUILDER'S ACCOUNTANT, good ESTIMATOR, and MEASURER, of many years' practical experience in the business, would be glad to UNDERTAKE any BUSINESS, upon the most reasonable terms. Has good opportunities of introducing builders to architects.—Address, B. D. Offices of "The Builder."

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who has been accustomed to conduct a business under the direction of a principal, is desirous of an ENGAGEMENT. He is a good draughtsman and colourist, has a knowledge of specifications and quantities, and is well practised in land surveying, levelling, &c. Good references and a trifling salary a secondary consideration.—Address, H. 7, Guildford-road, Greenwich.

AS PLUMBERS' LABOURER, a steady, sober, Young Man. Amount of wages not an object.—Address, H. G. Punch's Dining-rooms, 1, Pemberton-row, Gough-square, Fleet-street.

TO ARCHITECTS.

AN experienced, practical Clerk of Works, is OPEN to a RE-ENGAGEMENT. Fully qualified to superintend a church, or extensive works.—Address J. T. Office of "The Builder."

TO ARCHITECTS.

A YOUNG MAN, who is desirous of improving himself in the profession, wishes for an ENGAGEMENT with an ARCHITECT of good practice, at a moderate salary.—Address, DELTA, Office of "The Builder"

TO CARPENTERS AND BUILDERS.

A APPRENTICE.—WANTED, by the Guardians of a Youth, aged about 16, a SITUATION, in which he would have opportunities of learning the above trades efficiently, and where his morals would be looked after. A premium would be given. Apply, if by letter, to W. B. Post-office, Wellingborough.

A FIRST-RATE DRAUGHTSMAN, WRITER, and COLOURIST is now open to an ENGAGEMENT to execute plans of railways, estates, towns, drainages, docks, mines, collieries, and projects of every kind.—For specimens, &c. apply by letter to CYRUS, 15, Charing-cross.

AN ARCHITECT'S ASSISTANT desires a RE-ENGAGEMENT. Has had much practice in some of the best London Offices in preparing Gothic details, general drawings, and specifications for churches, houses, and fire-proof buildings of various kinds; and has also been in the habit of inspecting the execution of these works.—Address, A. B. 119, High Holborn.

TO LAND SURVEYORS.

A YOUNG MAN, aged 22, who has been three years in an architect's office, wishes for IMPROVEMENT with a Land Surveyor. Salary no consideration.—Address, A. B. 8, Pond-street, Hampstead.

PARTNERSHIP.—A Gentleman is desirous of entering into PARTNERSHIP with an ARCHITECT of established practice. The advertiser is fully qualified to take an active part, having been some time in business on his own account; or would not object to entering an office for a short period on salary, previous to partnership. References given and required.—Address, J. A. H. care of Mr. Wheeler, Royal Exchange-arcade, Manchester.

NORWICH UNION FIRE INSURANCE SOCIETY. (Established 1797.) Total Amount Insured £3,000,000.

Insurances may be effected with this Company upon more favourable terms than with other Offices.

For prospectuses apply at the Society's Offices, Surrey-street, Norwich; and 6, Crescent, New Bridge-street, Blackfriars, London.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.

Head Office—26, St. Andrew-square, Edinburgh. London Office—126, Bishopsgate-street, corner of Cornhill.

WILLIAM COOK, Agent.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 20, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman,
Deputy-Chairman.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy-holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1855, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that during the two last years, 1853 and 1854, between 800 and 900 new Assurances had been effected, producing an increase of premium income amounting to 14,000l. per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the last year in consequence of the visitation of the cholera, it had not been found necessary to reduce, in the slightest, the allowance of 3½ per cent previously awarded to the Policy-holders.

Credit is allowed for half the Annual Premiums for the first five years.

A. R. IRVINE, Managing Director.

14, Waterloo-place, London.

TO TELEGRAPH COMPANIES, CONTRACTORS, AND OTHERS.—TO BE SOLD, a large quantity of LARCH POLES, straight, sound, and of good quality, well suited for telegraph-posts, and for railway or other fencing. The owner would deliver the larch either as poles or made up into posts and rails of any dimensions, at the post of Hull or elsewhere if required.—For further particulars apply to Mr. JOHN USHER, Appleby, near Brigg, Lincolnshire; or to Mr. THOMAS BELTON, Nostell, near Wakefield, Yorkshire.

OAK SASH-CILLS, QUARTERING, &c. ready cut out to sizes and lengths required, at the lowest price.

Address, E. SIMMS,

SAWING, PLANING, AND MOULDING MILLS, KING'S-ROAD, CHELSEA, AND WILTON-ROAD, PIMLICO.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shop-fitters to his carefully selected MAHOGANY, suitable for Counter Tops, and to his seasoned Materials for builders, cabinet and blind makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

TO BUILDERS, CARPENTERS, &c.

SAMUEL CROWHURST, Jun. begs to call the attention of Builders Cabinetmakers, &c. to his Stock of seasoned and well-assorted Timber Goods, Deals, and Mahogany in Logs, Planks, Boards, &c. at prices which will be found equal if not less than any advertised. Country Builders supplied on the most liberal terms.—Timber-yard, Hanover-street, Walworth; and Prancle-street, Newington, near the Church

AT the LOWEST PRICES.—SAMUEL PUTNEY has much pleasure in informing the Trade, that notwithstanding the recent advances, he is still enabled to quote the following low prices:—

Yellow Deals, from	£24	0 per 120
Spruce ditto "	18	0 "
Yellow Battens "	12	10 "
Fine Planks, 12 ft. 3 In. by 11	24	0 "
Honduras Mahogany, in logs, 5d. per foot.		

Prepared Flooring, &c. at equally low prices. A list forwarded on receipt of a penny stamp.—Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

½ inch White, 13s. 6d. per square.			½ inch Yellow, 15s. per square.		
ditto	15s.	"	ditto	16s. 6d.	"
1 ditto	18s.	"	ditto	20s.	"

Laths, 3s. per load.

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.

ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 10 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

GEORGE SMITH, TIMBER-MERCHANT, LONDON.—Address to No. 16, Binfield-road, Clapham-road, Stockwell; or Jamaica Coffee-house, City. Goods delivered from the Docks. PREPARED FLOORING, &c. from the Saw-mills. Goods in Bond for Exportation.

N.B. A large Stock of Dry Prepared Flooring, &c. from Two to Four Years Old.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from ¼-inch to 1¼-inches thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Sialing Battens, Pantile Laths, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others are supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floor-boards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage which he has been stowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps.—Please note the address—20, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, suitable for various purposes, can be seen at the Works. and Estimates furnished upon application.

By JAMES SLIPPER, 87, Leather-lane, and 14 and 15, Dorrington-street, Holborn, London.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 4a, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

WOOD-CARVING and FRET-CUTTING. T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Ironfounders, Cabinet and Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch.—T. H. particularly solicits the attention of Ironfounders, having had many years' experience in ornamental pattern making.—Estimates furnished.

IMITATION of WOODS and MARBLES.—A grainer of established name is willing to TEACH the above art, or portions of it, to a few adult pupils, by a course of tuition by means of evening lessons, to be entered on immediately. The advertiser having a little time to spare before the summer trade commences, is ready to devote it to the above purpose.—For particulars, &c. address A. B. 91, John-street, Fitzroy-square.

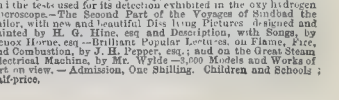
WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 8s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

FRANK SMITH'S ECCLESIASTICAL WAREROOMS, 13, Southampton-street, Strand.—Altar tables and chairs, pulpits, reading-desks, reredoses, font covers, &c. and every description of carving executed from architect's designs. Church walls, roofs, altars, &c. decorated. An Illustrated Catalogue sent on receipt of four postage-stamps.—Specimens may be seen at the Architectural Exhibition, Suffolk-street, Pall Mall, and at the Warerooms.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in the presence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 82, King William-street, City; and by the Manufacturing and Painting Agent, Mr FREDK. BRABY, Fitzroy Works, New-road. In Manchester and Liverpool, by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in Kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.



The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and at present Sole Agent in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and qualities that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-relievi, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is ORMES'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where parties can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new, whether of thatch, slate, or tile, and other pictures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect mode of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered from the wharf or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

ROYAL POLYTECHNIC.—INEXHAUSTIBLE NOVELTIES!—Lecture on the Poison STRYCHNINE, by J. H. Pepper, esq. daily, at Four and Nine. The poison and the tests used for its detection exhibited in the oxy hydrogen microscope.—The Second Part of the Voyages of Sindbad the Sailor, with new and beautiful Dissolving Pictures designed and painted by H. G. Hine, esq. and Description, with Songs, by Lenox Horne, esq.—Brilliant Popular Lectures, on Flame, Fire, and Combustion, by J. H. Pepper, esq.; and on the Great Steam Electrical Machine, by Mr. Wylde.—3,000 Models and Works of Art on view.—Admission, One Shilling. Children and Schools; half-price.

PORTLAND CEMENT WORKS
NORTHFLEET, KENT. Messrs ROBINS and Co with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured from Chalk and the purest Cement is applicable.—Orders received at Great Scotland yard, and at the Works.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON & Co. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & Co. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent. KNIGHT, DEVAN, and STURGE Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, or all works, or otherwise—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost and damp, not requiring to be part-seasoned. Also COMPARATIVE EXPERIMENTS on the strength of this and other Cements, tested at the Institute of Civil Engineers to be obtained at the Works, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London, and at the works, Northam, Southam, Rugby. N.B. These Cements supplied for shipment on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Lath, Slates, and Slate Slabs, Firebrick, Grit-stones, Cement Chimney-pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c., will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.
BRICK, LIME and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.
Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Glazing Bricks, White Enamelled Pans and Trays, and every description of Building Material.
N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT,
No. 14, SOUTH WHARF, PADDINGTON.
TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed in and adjacent to the Metropolis, and many orders they are far-ed with will command their best attention.
Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the River Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the best quality manufactured on the above Works. Also STOCK and KILN-BURNT BRICKS, hand or pressed and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This material also may be painted in oil, without a fawn tint of any application, and rooms be thus made dry sooner than by plaster.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention

PORTLAND CEMENT.—JAMES WESTON, having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade and Contractors that they can supply with any quantity at less rates than other of the Works, St. Andrew's Wharf, Barbottles, Blackwall, or Middle Wharf, Scotland-yard, Westminster. Materials for Roman, Lias, and Mastic Cements, Lath-hair, and Brown's plaster, &c.

PORTLAND CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND and ROMAN CEMENT, TERRA-COTTA, &c. J. M. BLASHFIELD begs to acquaint the Public that he has early CLOSED his Establishment on the Surrey side of the Thames, and that all parts of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS Lime.
The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being obtained in its purest and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. Test cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KELLMARK, 60, Old Broad-street, City.

DAMP WALLS.
STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,
Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.
Prepared only by W. J. STENT, Warminster.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.
HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor internal climates, will produce any change in its purity. Those inside may use, with perfect safety, Paints ground in oil, that have been mixed with other materials. Hubbuck's Patented White Zinc Paint is sold by the Wholesale Agents, Messrs. Spackman, Morris, & Co., 54, Fenchurch-street, London, in Original Packages, each cask stamped "HUBBUCK'S ZINC PAINT," and warranted. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the line mentioned, they confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Per sons sending orders for cement, are respectfully requested to state whether that purpose it is required, and printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.
Agents in London.—Messrs. GEORGE POTTER and CO., Lime Merchants, Perfect Wharf, Blackfriars, and 10, North Wharf road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.
G. BURGE, Jun. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland yard, Westminster.
DAVIES and NORMAN, Agents.
Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting cement, it requires no skilling. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, and 309, Regent-street, Liverpool.

NOTICE.—BLUE LIAS LIME.—C. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.
C. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great North-ern Railway, York-road, King's cross.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), and 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME, in any quantities from the above wharfs, or per barge direct from the kilns.
Large grey stone, or Grey Chalk, free on board at Works, 1s. 4d. per ton
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Woodbank-hall grey Stone Lime Works, on the Medway, near Rochester

NOTICE.
GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855. CHARLES RICHARDSON hereby informs those he has taken the above Wharf and Office, and has to keep a LARGER STOCK of the above valuable HYDRAULIC LIME, always on hand, that no future delays may be incurred in addressing to Orders for export, such goods as rivers, canals, or railway stations, should be given a few days before required.
GIBBS, CANNING, and CO.'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, and FIRE GOODS.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.
SECONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.
CHARLES RICHARDSON,

BATH CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. R. PEARSE and CO. Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO CEMENT and PLASTER MANUFACTURERS and others.—TO BE DISPOSED OF, A CEMENT STEAM-MILL, with shafting, two kilns, plaster mill, and extensive grinding and warehouse, situated in an increasing town, on the South Coast Railway. The premises are held under a lease, with power of purchase. As a knowledge of the business is not indispensable, those desirous of entering into the trade will find this a favourable opportunity, as the whole of the machinery is in active work, with small capital, who would desire the whole of his time to its extension. Apply at 20, Cranbourn-street, Leicester-square.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 50,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boy to remove the bricks. For a plete and clear description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, for the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester

BRICKS.—200,000 STOCK BRICKS, delivered into trucks at Wimbledon Railway Station, at 25s. per thousand. Place Bricks, at 28s. Apply to J. D. Dowell-street, Dover.

WHITE SUFFOLK PERFORATED BRICKS.—Messrs. J. EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made extensive arrangements for the Manufacture of White Suffolk Perforated Bricks, equal to the best hitherto produced, and to bricks of the same description imported from Holland, in order to produce a true and perfect shape, of an even and beautiful surface, and free from fire flaws.—J. EASTWOOD and SONS, Belvidere-road Lambeth.

THE BEST HERTFORDSHIRE MALM BRICKS.
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth, and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY.
(Within a short distance of the three bridges.)
THE BEST MALM-CUTTERS, STOCKS, PICKINGS, and PAVIORS.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road Lambeth.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Stocks, Cutters, Pavors, Shippers &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 5, ADELAIDE PLACE, London-bridge.

Depôt, Agar Wharf, King's-road, St. Pancras.
VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Rubbing Tiles, Sanitary Pipes, for Sewerage or Drainage, Chimney Pots, of the best quality. Wood and Son, Manufacturers, Netherbury, near Birmingham. Agent — Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings for sale and delivered, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the Bank. Builders earnestly requests purchasers to favour him with a visit, in order to ascertain the stock, and to judge for themselves.
Malm Cutters, Yellow and Stock-and Place-Bricks now on sale. These bricks are sound, well burnt, and uniform, and free from defects; a very large proportion of the stock being suitable for cheerful facings.
Apply at HENRY DODD and CO. at the Canal-turn-house, Hoxton Basin, Regent's-canal, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c. MESSRS. NEELD and CO., Brick-makers, Lime-burners, and Coal and Coke Merchants, Wharfingers, and Lighterage Contractors, beg to inform the Public, Builders, Contractors, and Others, that they have commenced business at their Wharf, Limehouse-basin, Regent's-canal, which one-third of the expense may be saved in cartage. Also, fine chalk, lime, gravel, flints, &c., delivered at any part of London. Bricks, lime, chalk, &c., shipped. Lighterage contracted for. Apply at the Wharf, as above, or at the Offices of Messrs. NELSON'S Wharf, Regent's-canal, Limehouse, or 5, Bush Wharf, Upper Thames-street, where Messrs. NELSON and CO. will be happy to receive orders, and give every information respecting the business.

BRICKS! BRICKS! BRICKS!—100,000 Stock and Place Bricks for sale.—Apply to SAMUEL Wellington, Somerset.

Malm Moulded Window Sill, Stretcher, Arch, Cornice, Plinth, Bullnose, Sash,

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that **FOUR-FIFTHS** of the **ROUGH PLATE**, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

SIX-HORSE POWER STEAM-ENGINE. A new, and very superior high-pressure 6-horse power table ENGINE, made [illegible] Mr. ELIAS WHITE'S [illegible] Without.

TO MANAGERS of DOCKS, HARBOURS, and NAVIGABLE RIVERS. — FLOATING FIRE-ENGINE TO BE SOLD.— The Committee for Managing the London Fire-engine Establishment having adopted steam vessels [illegible] Fire-engines, [illegible] Thames, [illegible] Apply to Mr. BRAIDWOOD, Watling street, City.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD.—This Guard allows free egress for the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders, and of the Patentee, at his Office, 65, Fenchurch-street, London.

FOR PURE AIR and PERFECT VENTILATION, "WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS" are undoubtedly the best and cheapest.—Sole London Agents LANDER and BEDELLS, 67, Chancery-lane.

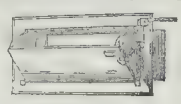
By Her Majesty's Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.

Also,

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.

Also,



VENTILATING ROOFLIGHTS, for Slate or Tile Roofing, without Paint or Putty

Prospectuses sent on application.

London Depôt—ESNOUF and MANGER, 141, Minories, City.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the

admission of pure air through an EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 195, Blackfriars road, and 17, Union-street, Borough; and of all respectable ironmongers, builders, &c.

DRAUGHTS ROUND DOORS and WINDOWS.—GREENWOOD'S PATENT INDIA-RUBBER STOPS, to supersede list or leather, for the purpose of keeping out dust and draught round doors, windows, sash lights, screens, &c. making the same air-tight. Price 4d. per foot. Spring Slides for bottoms of doors, 4s. each.

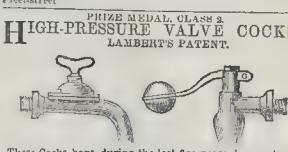
JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London-bridge.

LESS FUEL, MORE STEAM, NO SMOKE.

GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855.

"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled, without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.



"I remain, dear Sir, yours truly,

"To E. V. GARDNER, Esq." "FREDK. ALLEN.

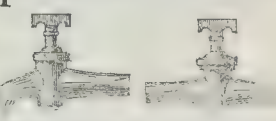
Apply to the PATENTEE, 34, Norfolk-street, Middlesex Hospital; or to Messrs. BURRIDGE and HEALY, 138, Dorset-street, Fleet-street

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.



Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WATSON'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

THE STAFFORDSHIRE SANITARY POTTERY COMPANY.

Proprietors, E. F. WINSTONE and CO.—Manufacturers of glazed water closets and urinals, half stone glazing, and white enamelled inside, and every description of pan basins; also vitrified and glazed sewer pipes, 150, Great College-street, Camden-town, London, late of Pickard-street, City-road.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers, and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BRITISH SOLDIERS, REGENT'S PARK,

And by the most eminent men of the Royal Agricultural Societies of England, Scotland, and Ireland; at which great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 33 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. There is a license and BONA FIDE AGAINST MISREPRESENTATION, as the only works in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, 3, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also at the New Courts of Justice, the Treasury, and others leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

1	1½	2	2½ inches.
6d.	10d.	11d.	1s. 3d. 1s. 6d per yard.

The hose is Burnettized at an extra charge of 4d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following Testimonial:—FROM SIR RAYMOND JARVIS, Bart., YENTN. R. ISLE of WIGHT.—Second Testimonial.—"March 16th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is t dopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS

N. Woolwich Elastic Steam-packing (Canvas and India-rubber), at 1s. 4½ per lb.

Great Northern-wharf, York road, King's-cross.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP FOR STREET USE.

Price, with Gutter Plate, 12 inches by 12 inches, each 22s.; weigh about 2 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.

10 inches by 8 inches, each 10s.

The above articles are protected for the Patentee by the British Government, on account of the construction, for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down, general speaking no attention is ever paid to them afterwards: this remarks them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves first those places where the air is vitiated by obnoxious gases proceeding from drains, &c.

Any inhabitant suffering any inconvenience, is entitled, by the Sanitary Act, to lay complaint before the parish or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings and if wished, testimonials. Please order from any respectable ironmonger, contractor, or the Patentee, JAMES LEWIS, Ironfounder, Aberdeen. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham.

HENRY DOULTON AND CO.

HIGH-STREET, LAMBETH, LONDON.

MANUFACTORIES—HIGH-STREET, LAMBETH; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.

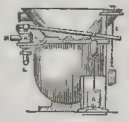
DEPOT—ARTHUR-STREET, NEW OXFORD-STREET.



PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS,

manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORK HOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

UNDERHAY'S PATENT REGULATOR CLOSETS for

constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 2,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more ornamental, than any other Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BOTTEN and SON,
Brass Founders, Crawford-passage, Clerkenwell, London.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c &c.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 29, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

Frasi, a bankrupt), situate on the west side of the Archway-road, Highgate, on THURSDAY, FEBRUARY 7, at ONE for TWO o'clock punctually, the remaining portion of the excellent BRICKS, consisting of 280,000 stocks, grizzles and place, which must be cleared away within a month, as the builder's term of possession will cease. May be viewed the day before and morning of sale, when catalogues may be had on the Premises, and at the Auctioneer's, 170, Bishopsgate-street Without.

SALES BY AUCTION.

IN CHANCERY.—"Gough v. Hunting," "Hunting v. Gough."
The Pantechnicon and Cabinet-makers' Proprietors of Saw-mills, and Others. The valuable Patent Right for Cutting in lieu of sawing Veneers, whereby fully double the number of Veneers of equal thickness are obtained from the Log than are obtained from the use of the Saw; together with all the Patent Machinery, Steam-engine, Boiler, and Gear for making the same, as also the Lease of the Premises, &c.

MESSRS. PRICE and CLARK will SELL by AUCTION, on the PREMISES known as the Canal-bridge Wharf, in the Kingsland-road London, on THURSDAY, FEBRUARY 7, at TWELVE for ONE, by order of the Right Hon. the Master of the Rolls the QUEEN'S ROYAL LETTERS PATENT, granted to William Gough and another for "IMPROVEMENTS in the MANUFACTURE of VENEERS and in Machinery and Apparatus connected therewith," dated 28th October 1853 being one of the most ingenious and important inventions of modern times, which is held for a long term at a moderate rental. At the same time will be sold several thousand feet of well-seasoned mahogany, a dog-cart and harness, and sundry effects—The whole may be viewed two days prior to the sale and particulars had of Mr SAMUEL D. HAMILTON Solicitor, 20, King's-road, Bedford-row, of Messrs. TRENDER and ESSE, Solicitors, 1, John-street, Bedford-row; of Messrs. KNIGHT and DAVIS, Solicitors, Newcastle-under-Lyne; at the Place of Sale; and of Messrs. PRICE and CLARK, Auctioneers 48, Chancery-lane, London.

TO SPECULATORS, BUILDERS, LEAD MERCHANTS, and GENERAL DEALERS &c.—HER MAJESTY'S OLD STATIONERY OFFICES JAMES-STREET, BUCKINGHAM-GATE, WESTMINSTER.

MESSRS. J. and B. DALES, Contractors, beg to offer for SALE, the whole of the very valuable MATERIALS, comprised in the above buildings which consist of lead slates, timber, iron-work, and other doors marble and other chimney-pieces, stoves, ranges, mahogany and other staircases, water-closets, cesspits, sewage, large Doric four-column portico, &c. For particulars apply on the Premises.

FREEHOLD LAND TO BE LET, on Building Lease for ninety nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations. Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Chancery-lane.

FREEHOLD GROUND, CHANCERY-LANE and FETTER-LANE The Commissioners of Sewers of the City of London hereby give Notice that they will meet in the GUILDHALL of the said City, on TUESDAY, the 26th of FEBRUARY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking on Building Lease for Eighty Years, certain PLOTS of GROUND, situate at the south-west end of Chancery-lane, and the south-west end of Fetter-lane—Further particulars may be had and plans seen, on application to Mr. HAYWARD Engineer and Surveyor to the Commission, at the Guildhall. The Commissioners will require a plan and elevation of the premises proposed to be built to be submitted to them for approval, and do not bind themselves to accept any proposal, unless deemed advantageous

JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, January 2, 1856.

TO BUILDERS and OTHERS.—SITE for a TAVERN adjoining a new cemetery, just opened. To be LET, on build ing lease, a capital Site for a Tavern, with Four-fronted houses, which are in great demand in the neighbourhood.—Apply to Mr JOHN COLLIER, Surveyor, 7, Clement's-lane, Lombard-street, City

HARROW.—FREEHOLD LAND.—TO BE SOLD, 100 feet of ground in a ring fence, and several other eligible plots of FREEHOLD LAND, at a moderate price, contiguous to the Harrow Railway Station, surrounded and intersected by capital roads. Purchasers are entitled to the privileges of the Harrow School, and the Lessees of North-western Railway Company offer to persons in fee the use of upper class station, worth 5*l.* per year each, a free first-class pass between Harrow station and Euston-square, for electric grass. There is an excellent supply of excellent water, and very superior brick earth on the land. Apply to WILLIAM B COOPER, Esq. Solicitor, 3, Verulam-buildings, Gray's-inn.

BUILDING-GROUND, Clerkenwell, in the direct line of the new street from Farringdon-street to Islington GROUND to be LET for thirty years, houses, with or without workshops and back entrances in capital situation for public-house. To see plans, particulars inquire at the Office of N. T. RANDALL, Esq. Architect, 28, Great Winchester-street, City, between the hours of TEN and FOUR o'clock.

WANTED to PURCHASE, from ONE to TWO ACRES of FREEHOLD LAND, suitable for the erection of manufacturing premises within 4 miles of Charing-cross; the neighbourhood of Camden-town or Somers-town preferred. Address full particulars to Messrs WIGG, SON, and OLIVER, Architects, 7, Bedford-row.

BUILDING LAND WANTED, within two miles of Charing cross.—To a advertiser requires about one or more acres for the purpose of building shops, for drying timber, &c. Leasehold property or freehold would be preferred. An early and liberal answer is required, sufficient to pass a season, to which situation would answer, and a fair moderate price would be given, according to situation and facility of access, &c.—Address, F. M., Hungerford-hall Letter-office.

TO BUILDERS, CAPITALISTS, and OTHERS.—To BE LET, on building leases, direct from the freeholder, for the term of 80 years, several eligible ground-rents a PLOT of GROUND, comprising in extent nearly three acres, situate on the GREEN LANES, PRIOR'S ROAD, and within three miles of the General Post-office, Lincoln's-inn-fields. Plans prepared, showing the mode in which it is proposed to lay out the ground for the second and third class houses; and which lessees can be seen, and every particular obtained, at the Offices of Mr HERBERT PRICKETT, Surveyor, 13, Chancery-lane, and 23, Paddington-green

WANTED, on LEASE, within Ten Miles of the City, adjacent to either the North, Kent or Brighton Railways, a DETACHED or SEMI-DETACHED RESIDENCE, with Garden, &c. Rent about 70*l.* per annum.—Address to Mr W. P. GRIFFITH, Architect, 9, St John's-square, Clerkenwell

TO BE LET, SEMI-DETACHED VILLAS, in immediate neighbourhood of Victoria New Docks, and in parish of Plaistow. Each house contains entrance hall, breakfast-room, three bed-rooms, kitchen, scullery, pantries, and W.C. They are completely fitted up with every convenience,—copers, water, stoves, and bells. They are partially grained oak and varnished, and all are papered with newest patterns. They are ready for immediate occupation, and, in consequence of the failure of the builder, they will be let for the low rent of 25*l.* per annum. Taxes are very moderate, and railroad and omnibus conveyance within easy distance—Apply to Messrs. WM. G. and E. HABERSHON, Architects, 39, Bloomsbury-square, London; at whose Office views and drawings may be seen.

MANUFACTURING WATERSIDE PREMISES, with STEAM POWER.—TO BE LET on LEASE, spacious MANUFACTURING PREMISES, well adapted for a Distillery, Manufacturing Chemist, or Colour Manufacturer; situate on the banks of the River Lea Canal, within a few minutes' walk of the Station of the Blackwall Railway. The site occupies a total area of about one acre and a half. There is a commodious family residence with garden, a wharf, with frontage of 300 feet, an extensive well, condensing steam engine of 14-horse power, with boiler and pumps, with pipes to a large iron tank, capable of holding 10,000 gallons of water; also a large filtering pond or reservoir for water.—Apply to Messrs FULLER and HORSEY, Billiter-street, City

TO TIMBER MERCHANTS and OTHERS.—The Proprietors of Letts's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 40 feet Cranes Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

IMPORTANT to SOAPMAKERS, CAPITALISTS, and OTHERS TO BE LET, all those excellent and complete SOAP WORKS, situate at Bloomfield, in the parish of Tipton, in the county of Stafford, comprising cutting and framing rooms, store-room, packing room, boiling-room, with four coppers, soap and cutting room adjoining, pan frame, boiling teapan, black ash furnace, with sheds attached; smiths' shop, stable and cart house, frame yard and reservoir, with a good supply of water. The Premises are fitted with every convenience, and are in a substantial state, and capable of working to a very extensive trade. Also a substantial and commodious DWELLING-HOUSE for the Manager, with every necessary convenience, and in a most complete and perfect state of repair, adjoining the Works, and within short distances of extensive coal mines, iron works, canals, and the goods stations on the Stour Valley and Oxford, Worcester, and Wolverhampton Railways. The property is being up the premises in consequence of other engagements. To treat, application is requested to be made to Messrs JAMES and JOSEPH HIPKINS on the Premises; or to Mr. SOLOMON POWELL, Surveyor, &c. Tipton, Staffordshire

BUILDER'S BUSINESS in Westminster, TO BE DISPOSED OF, with extensive Premises, comprising suitable erections, workshops, sheds, store-rooms, and offices for carrying on a large trade. The connexion is an old established one, and will be found worthy the attention of any one taking a lease of the Premises and the Stock and Plant at a valuation.—For particulars and terms, apply to Messrs. EVERSFIELD and HORNE, Auctioneers and Estate Agents, 40, Parliament-street.

LOANS from 25*l.* to 1,000*l.* upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding five months, or credit. OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES Prospectuses, reports, and every information may be obtained on application at the Stock and Share Office, 17, New Bridge-street, Blackfriars. Rules 6*d* each copy, post free.

CHARLES JAMES THICKE, Resident Secretary

MONEY on LOAN, at 3*l.* per Cent. per Annum.—ARNEWAYS CHARITY NOTICE is HEREBY GIVEN, that the Trustees of the Charity are enabled to lend out the Trust Funds belonging to poor freemen residing within the City and Liberty of Westminster, that is to say, St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. Giles-in-the-Fields, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 10*l.* is to clear interest after the rate of 3*l.* per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 4, Great Marlborough-street, St. James's Park.

By order, EDWARD S. STEPHENSON,
Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the first Wednesday in every month, to consider such applications for loans as have been sent in to their clerk at least before the first day of the month.—The sureties must be unexceptionable.

METROPOLITAN LOAN COMPANY, Established 1850.
1, CRAVEN-STREET, STRAND, LONDON
Loans are advanced in amounts from 10*l.* to 100*l.* to be repayable weekly or otherwise, as may be agreed upon, at a discount of 5*l.* per cent. for twenty five weeks, and for 50 weeks at 8 per cent. Forms may be had, post paid, on receipt of three penny stamps to be enclosed.

ROBERT NORTON, Secretary

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying most moulded clays, sound at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.
HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE: it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom

TO CARVERS and GILDERS, and OTHERS desirous of entering the Connection and Premises for the Business recently carried on by JOHN MOULDS and other requisites quite new TO BE SOLD a bargain Single, and opportunity rarely offers.—Apply at No. 1, New street, Bishopsgate street

IMPORTANT to ARCHITECTS, SURVEYORS ENGINEERS, BUILDERS, and DRAUGHTSMEN in general.—Messrs. BERKELEY and CO. respectfully inform those connected with the above Professions, and others, that they have invented a new description of SELLING PLATE for the better and more easy and expeditious production of their impression, and enable any person to print off in small numbers, in a manner almost elaborate style, equal to, or excelling lithography, with a facility unequalled and at a very moderate cost. Specimens sent to any part, by a letter addressed to Messrs. BERKELEY and CO. No. 9, Alfred-road, Harrow-road, London, prepaid, and enclosing stamp for answer.

BOGHEAD CHARCOAL.—TO BE SOLD, by Private Contract, about Forty Tons of BOGHEAD CHARCOAL for deodorising purposes, now lying in London.—For particulars apply to Mr. JONES, Wood-block, Southampton. A sample of the above may be seen at the Office of Mr. H. KNIGHT, 14, Chatham-place, Blackfriars; or at the Office of Mr. JONES, as above.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufactures, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera, Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing on Wood, Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students at present, morning, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

METROPOLITAN BOARD of WORKS.

SUPERINTENDING ARCHITECT. — Metropolitan Building Act, 1855.—The Metropolitan Board of Works hereby give notice, that they will meet in the COUNCIL CHAMBER, GUILDHALL, on MONDAY, the 4th of FEBRUARY next, at TWELVE o'clock at noon, to appoint a SUPERINTENDING ARCHITECT. The gentleman appointed to this Office will be required to perform the duties defined by, or which may be requisite for enabling the Board to carry out the provisions of the Metropolitan Building Act, and Metropolis Local Management Act. He must act as the professional adviser of the Board, on all matters relating to the office of District Surveyor, and on questions of fees and compensation connected therewith, and generally on all matters which the Board may desire to refer to him, and to perform all such other duties in point to the office of Superintending Architect, as he may be required to perform. He must devote the whole of his time and attention to the duties of his office, as directed by the Act of Parliament. The salary, inclusive of travelling expenses, will be 800l. per annum.—Applications in writing, from gentlemen de sirous of becoming candidates, addressed to JOHN THWAITES, Esq. Chairman of the Board, will be received at this Office till SATURDAY, the 2nd of FEBRUARY, at TWELVE o'clock at noon.

E. H. WOOLRYCH, Clerk to the Board.

Office of the Metropolitan Board of Works,
1, Greek-street, Soho-square, January 26, 1856.

TO ENGINEERS AND SURVEYORS.

THE LOCAL BOARD of HEALTH of HASTINGS require a SURVEYOR able to undertake the duties of that Office, under the Public Health Act, 1848. He must be competent to prepare plans, sections, drawings, and estimates, and to be conversant with the practice of engineering generally, and able to superintend and carry out the execution of all necessary works of drainage and others, which will fall within his duties. He will be required to devote the whole of his time to the duties of the office. salary, 200l. per annum. He will also have to act as Surveyor to the Corporation, with an additional salary of 20l. per annum.—Applications, with age, testimonials of qualification and competency, to be addressed to "The Local Board of Health," indorsed "Application for Office of Surveyor," are to be forwarded, under cover, to the Town Clerk, Hastings, on or before the 21st day of FEBRUARY next.

JOHN G. SHORTER, Town Clerk.

Hastings, January 19, 1856.

ARCHITECTURAL EXHIBITION and COLLECTION of PATENTS and MANUFACTURES connected with Building, NOW OPEN at the GALLERIES, 9, SUFFOLK-STREET, Pall-mall East. Admission, One Shilling; or to the Galleries at all times, and to all the Lectures, by season tickets, Half-a-Crown each. Lecture for TUESDAY EVENING, FEBRUARY 12, at EIGHT o'clock, "The Influence of Light and Shadow on Architectural Composition," by THOS ALLOM, Esq. All particulars at the Galleries. No lecture on February 5th.

CONTRACTS.

SWANSEA LOCAL BOARD of HEALTH.—WATERWORKS To IRONFOUNDERS, PIPE LAYERS, and OTHERS.—The Swansea Local Board will meet on the 5th day of FEBRUARY next, to receive Tenders from Parties who may be willing to undertake either of the following Contracts:

CONTRACT No. 2 For the Supply of a Quantity of Sluice Valves, Hydrants, &c.

CONTRACT No. 3.—For the Supply of about 175 tons of Cast-Iron Pipes and other Castings.

CONTRACT No. 4.—For Excavating the Ground, and Laying and Jointing about 7,500 lineal yards of Cast-Iron Mains, together with the fixing of a quantity of Hydrants, Sluice Valves, &c.

The Drawings and Specifications may be seen on and after the 23rd instant, and any further information had on application at the Offices of the Board, Guildhall, Swansea; or at the Office of ROBERT RAWLINSON, C.E. 74, Parliament-street, Westminster. Duplicate forms of Tender, &c. may be obtained upon payment of 2s. 6d. per set.—Sealed Tenders to be sent in to the Clerk to the Local Board, on or before the 4th day of FEBRUARY next. C. B. MANSFIELD, Town Clerk.

Swansea, January 8, 1856.

BOROUGH of SOUTHAMPTON.—NAMES of STREETS.—Notice is hereby given that the Southampton Local Board of Health are desirous of receiving TENDERS from any Person or Persons willing to furnish DESIGNS or LABELS for naming the several Streets in the Town. The Streets and places to be named amount to 200 or thereabouts. Further particulars may be obtained of Mr. J. G. POOLE, Surveyor to the Board. Endorsed Tenders, with specimens of the work, must be delivered (by me at my Office, or before that hour) on FRIDAY next, in lieu of the 28th instant, as before advertised. No pledge is given to accept the lowest or any other Tender.—By order,

Public Health Office, Southampton, 23rd January, 1856.

SOUTH-EASTERN RAILWAY COMPANY.—TENDERS for the SUPPLY of TWENTY NEW FIRST-CLASS CARRIAGES.—The Directors of this Company are prepared to receive TENDERS for the supply of TWENTY new FIRST-CLASS CARRIAGES. Drawings, specifications, and patterns for the same may be seen on and after WEDNESDAY, the 30th instant, at the Engineer's Office, London Terminus; and any further information that may be required can be obtained on application, by letter or otherwise, at the Office of the Company's Carriage and Waggon Superintendent, Ashford, Kent. Sealed Tenders, endorsed "Tender for new First-class Carriages," to be delivered to the undersigned on or before TUESDAY, the 19th proximo.

S. SMILES, Secretary.

London-bridge Terminus, 23th Jan. 1856.

TENDERS. — CAMBRIDGE LUNATIC ASYLUM.—Builders and Others contracting for these Works are requested by one of the competitors to add to sums to the amount of their estimate, in order to pay the unsuccessful their cost in obtaining the copy of quantities, the architect declining to return the fees paid him for the same. Why should builders submit to be taxed?

N.B. The quantities supplied by the architect are not guaranteed, although 2 per cent. an unusually good price, is charged for them.

TO BUILDERS.

NEW FARMSTEAD.—Persons desirous of TENDERING for FARM BUILDINGS, to be erected at Walton Grounds, Aynho, near Banbury, Oxfordshire, on the estate of Col. North, M.P. may see the plans and specification of the works at the Office of Messrs. DANBY and CALES, Auctioneers and Estate Agents, Banbury. The Tenders are to be delivered at the Office of Mr. J. F. CLARK, Architect, Newmarket, on or before SATURDAY, the 9th of FEBRUARY. The lowest or any Tender will not necessarily be accepted. Quantities can be obtained on application to Mr CLARK.

TO BUILDERS AND OTHERS.

ALL PERSONS willing to CONTRACT with the Magistrates of the County of Nottingham, for the ERECTION of STOREHOUSE, ARMOURY, GUARDHOUSE, GAOLS, and other BUILDINGS, and for WORKING WALLS and undraining the same, to be built at Newark upon-Trent, for the Royal Sherwood Foresters, or Nottinghamshire Militia, may see the drawings and specification, and obtain all further particulars on application at the Offices of Mr CHARLES FAILY, the architect at Newark, on and after MONDAY the 4th day of FEBRUARY next. Tenders to be sent in to the undersigned upon Trent on or before MONDAY the 11th day of FEBRUARY, by TWELVE o'clock at noon. The Magistrates will not bind themselves to accept the lowest or any of the Tenders sent in.

J. F. A. BROMLEY, Deputy Clerk of the Peace.

Newark, January 23rd, 1856.

TO BUILDERS.

PERSONS desirous of CONTRACTING for FARM BUILDINGS, to be erected at Kirtling and Ashley, near Newmarket, on the Estate of the Hon. W. H. J. North, may see the plans and specifications at the Office of Mr. J. F. CLARK, Architect, Newmarket. The Tenders are to be delivered on or before the 9th of FEBRUARY, and will be opened in the presence of parties Tendering. The lowest or any Tender will not necessarily be accepted. Quantities can be obtained on application.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall-mall, London, on or before WEDNESDAY, the 20th day of FEBRUARY, 1856, from persons desirous of contracting for extensive ADDITIONS and ALTERATIONS to the WESTERN HEIGHTS BARRACKS, at Dover. Drawings and specifications of the works to be executed, may be seen by persons fully competent to undertake the work (none others need apply), and Forms of Tender obtained at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock, from FRIDAY, the 1st of FEBRUARY, to TUESDAY, the 19th of FEBRUARY, 1856, Sundays excepted. A person belonging to the Royal Engineer Department will attend each day at the Western Heights Barracks, from TEN to TWELVE o'clock, to point out the work and explain the drawings. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 2,000l. for the due performance of the contract. Tenders for the above work to be addressed to the Director General of Contracts, Pall-mall, London, and endorsed "Tender for work at Dover."—N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, January 16th, 1856.

NOTICE to BUILDERS and CONTRACTORS—ORDNANCE WORKS.—Sealed TENDERS for EXCAVATING and LEVELLING the GROUND, and the EXECUTION of MASONRY, &c. &c. at Mount Tourville, Alderney, will be received by the Director General of Contracts, War Department, Pall-mall, London, on or before SATURDAY, the 16th FEBRUARY next, after which date no Tenders will be received. Detailed drawings may be seen, and every requisite information obtained, at the Royal Engineer's Office, Alderney; and also at the Office of the Inspector General of Fortifications, War Department, Pall-mall. Forms of the Contract, Specification for the work, and forms of Tender, can be procured at the Office of the Director General of Contracts, War Department, Pall-mall; and at the Royal Engineer's Office at Guernsey and Alderney. Each Tender forwarded must be attached to a copy of terms of Contract and specification. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.—Tenders for the above work to be addressed to the Director General of Contracts, War Department, Pall-mall, London, and endorsed "Tender for Excavating and Levelling Ground, and the Execution of Masonry, &c. &c. Mount Tourville, Alderney."

War Department, Pall-mall, London,
24th January, 1856.

CONTRACTS. — Royal Engineer's Office, Chatham, 24th January, 1856.—Notice is hereby given, that TENDERS will be received at the War Department, Pall-mall, London, on or before MONDAY, the 18th day of FEBRUARY, 1856, for the performance of the following branches of ARTIFICERS' WORK, for the War Department, at the under-mentioned Stations, for a period of two years, from the 1st of APRIL, 1856, determinable at any period after one year, on either party giving to the other three months' notice in writing, viz:—

At CHATHAM.—Plumbers' Work.

At GRAVESEND and its Environs, comprising Tilbury Fort, Shorne Mead, and Coal House Batteries.—Painters', Glaziers', and Paperhangers' Works.

Plumbers' Work.

Separate Tenders to be made for these two Stations, as well as for the different Contracts; nevertheless, Tenders for Gravesend and Environs may be submitted for the several trades together, in one Contract. Printed forms and schedules of Contract may be obtained on application at the Royal Engineer's Office, at Chatham, and at Gravesend, from the 4th to the 16th of FEBRUARY, on Sunday excepted, on and no Tender can be admitted after the said 18th day of FEBRUARY, 1856. The War Department reserve to themselves the right of rejecting any or all Tenders that may be presented.

NOTICE to BUILDERS.—Royal Engineer Office, Portsmouth, 30th January, 1856.—TENDERS for the CONSTRUCTION of a COFFER-DAM, at FORT MONCKTON, in front of the left face of the South-west Bastion, and the Retaining Wall adjoining; and for REBUILDING a PORTION of the SOUTH-WEST FACE, about 36 feet in length, will be received by the Director General of Contracts, War Department, Pall-mall, on or before NOON of MONDAY, 11th FEBRUARY next. Plans, specifications, and any other necessary information, may be obtained, on application at the Royal Engineer Office, Portsmouth, between the hours of TEN and FOUR o'clock, up to 9th FEBRUARY. Tenders to be endorsed, "Tenders for Coffer-Dam, and rebuilding Masonry Wall, &c. at Fort Monckton, Gosport, Hants."

TO BUILDERS.—The New Asylum for Fatherless Children.—TENDERS are required for the ERECTION of an ASYLUM at Coulsdon, three miles from Croydon, on the Brighton Line of the Brighton and South Eastern Railway. Builders who may be desirous of Tendering, may inspect the drawings and specifications of works at the Office of the Architect, W. H. MOFFATT, Esq. 2, Adelaide-place, London-bridge. Lithographed bills of quantities and forms of Tender, and of schedule of prices, may be had on application to Messrs. BALMAN and LEE, 10, Buckingham-street, Strand, on payment of two guineas. Sealed Tenders are to be sent to the Office of the Charity, at Poultry, under cover, addressed to the Secretary, on or before THURSDAY, the 21st inst., and any Tender not in accordance with the form supplied will be rejected. The party whose Tender may be accepted will require to enter into a bond, with two responsible sureties, jointly and severally in the sum of 5,000l. for the due performance of the contract. The Board of Managers do not bind themselves to accept the lowest Tender.

DAVID W. WIRE, } Hon.
THOMAS W. AVELING, } Secs.

Office, 32, Poultry, 1st February, 1856.

CONTRACTS.

TO BUILDERS.

THE GUARDIANS of the POOR of the WEST HAM UNION are desirous of receiving TENDERS for the ERECTION of certain ADDITIONS to and for making ALTERATIONS at the WORKHOUSE of the said union, situate at Leytonstone, in the county of Essex. Plans, specification, and conditions may be seen at the office of Mr. WILLIAM A. MASON, Architect, No. 8, Great St. Helen's, London, on and after THURSDAY, the 17th day of JANUARY instant, between the hours of TEN and FOUR. Sealed Tenders, endorsed "Tender for Works, West Ham Union Workhouse," are to be sent to the Clerk of the said Union, at the Boardroom at the Workhouse before TEN o'clock a.m. THURSDAY morning, the 14th day of FEBRUARY next, after which time no Tender will be received. Bills of quantities may be obtained of Mr. MASON on payment of 1l. 1s. which will be returned if the party paying the same duly deliver in a Tender. The contractor will be required to give security, and also to do the contract according to the plans and specification for the due performance of the works aforesaid; the terms and conditions as there set forth. The Guardians do not bind themselves to accept the lowest or any Tender.—By order of the Board of Guardians,

W. J. BARSHAM, Clerk.

Board room, Leytonstone, January 19, 1856.

WEST BROMWICH UNION.—The ERECTION of a NEW UNION WORKHOUSE EXTENSION of TIME. Persons desirous of CONTRACTING with the Guardians of the Poor of the West Bromwich Union, in the counties of Stafford and Worcester, for the erection of the New Union Workhouse, are hereby informed that the time for sending in Tenders for the same is EXTENDED to the 22nd day of FEBRUARY next, on which day they must be sent to me in pursuance of the terms of the former advertisement.—Full particulars may be obtained at the Offices of Messrs. BRIGGS and SEVERN, Architects, No. 29, Bradford-street, Birmingham, where the drawings and specification may be seen until the 21st day of FEBRUARY next.—By order of the Board,

CHAS. STRINGER, Clerk.

West Bromwich, 14th January, 1856.

TO BUILDERS.

THE GUARDIANS of the POOR of the RISBRIDGE UNION are desirous of receiving TENDERS for the ERECTION of a new UNION WORKHOUSE, for the accommodation of [illegible] with Guardians, Committee Rooms, Master's, Matron's, Schools, Infirmary, and other buildings, at Redgrave, near Hapenhall, Suffolk. Plans, specifications, and forms of tender may be obtained of Mr. JOHN FRANCIS CLARK, Architect, Newmarket, where full particulars can be obtained before NINE o'clock on FRIDAY morning, the 29th day of FEBRUARY next, after which time no Tenders will be received. The contractor will be required to give security to the amount of £2,000 for the due performance of the work: to be completed by the 1st day of JANUARY, 1857. The Guardians do not bind themselves to accept the lowest or any Tender. Dated 25th January, 1856.—By order of the Board of Guardians,

JOHN H. JARDINE.

Haverhill, near Newmarket, Suffolk.

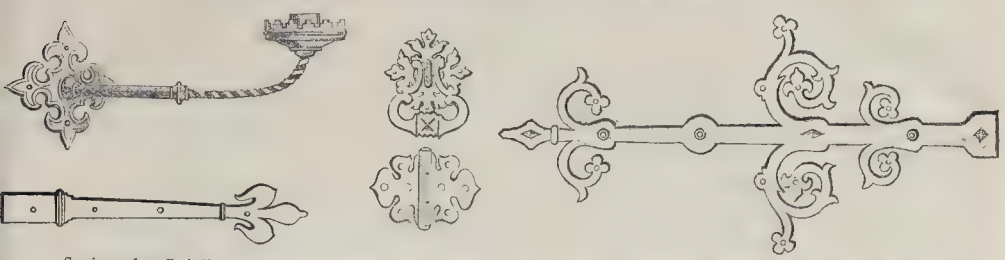
SHIPLEY SEWERAGE WORKS.—The Shipley Local Board of Health, hereby give Notice, that they are prepared to receive TENDERS from competent persons for FORMING and LAYING DOWN, with SIMPLE-JACOBER TAIN BRICK and EARTHENWARE, SEWERS and DRAINS, MANHOLES, GULLIES, and other WORKS, required for the sewerage and drainage of their district. Plans, sections, detail drawings, and specification may be inspected, and printed forms of Tender obtained, at the Offices of Mr. J. McLANDSBOROUGH, Civil Engineer, 24, Oastler-street, Bradford. Sealed tenders, marked on the outside "Tenders for Sewerage Works," addressed to the undersigned, on or before FRIDAY, the 8th day of FEBRUARY, 1856. The Local Board do not bind themselves to accept the lowest or any Tender.

By order,

JOHN THOMPSON, Clerk to the said Local Board.

Bradford, January 10, 1856.

TO IRONFOUNDERS AND GAS-WORK CONTRACTORS.



THE DIRECTORS of the HASTINGS and ST LEONARD'S GAS COMPANY will meet at their Office, Hastings, on FRIDAY the 15th of FEBRUARY next, before TENDERS for the SUPPLY and ERECTION upon their works in HASTINGS of a CAST-IRON GAS-HOLDER TANK, 91 feet internal diameter, and 24 feet deep, with inlet and outlet pipes complete. The plans and specification may be seen at the Company's Works, Meadow Cottage, Bohemia-street, Hastings, on and after the 28th instant, and at the Office of Mr. W. R. YOUNG, as the Clerk of the Company's Engineer, on and after the 30th instant. Sealed tenders, addressed to the Directors, at the Office of W. R. YOUNG, as the Clerk of the Company's Engineer, on and after the 30th instant. Sealed tenders, addressed to the Directors, at the Office of W. R. YOUNG, as the Clerk of the Company's Engineer, to be delivered at the Office

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, DRURY-LANE, STRAND, LONDON.

Prize Medal Great Exhibition, 1851. First-class Prize Medal Paris Exhibition, 1855.

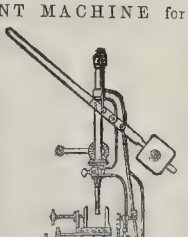
Specimens from Paris Exposition at the Architectural Gallery, Suffolk-street, Pall-mall. Illustrated Price Catalogue post-free on application.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to



THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

N.B. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch. A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES

a complete LIST of which will be forwarded upon application.

FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-square, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its applicants have been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one

Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 13, York-buildings, Adelphi.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron bridge.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opposite to the Monument, London-bridge. Established A.D. 1700.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

BUILDINGS HEATED by HOT WATER. G. R. COOPER, IRONWORKS, 191, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

FENDERS, STOVES, and FIRE-IRONS. Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto, with ormolu ornaments and two sets of bars, 3l. 10s. to 12l. 12s.; bronzed fenders, complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 12s. to 9l.; ditto, with rich ormolu ornaments, from 2l. 15s. to 7l. 7s.; fire-irons, from 1s. 9d. the set to 2l. 4s. Every other and all other patent stoves, with radiating heautl-plates. All which he is enabled to sell at these very reduced charges.

Firstly.—From the frequency and extent of his purchases; and Secondly.—From those purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS. The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers, in Metal and Glass, all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Establishment the largest and most remarkable in the kingdom. viz fr. m 12s 6d. two-light to 16l. 16s.

THE BEST SHOW of IRON BEDSTEADS in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads, from 16s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with dove-tail joints and patent sacking, from 16s.; and Cots, from 20s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.

The alterations and additions to these extensive premises (already by far the largest in Europe), which occupied the whole of last year, are completed; they are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent Stock of GENERAL HOUSE IRONMONGERY, including Cutlery, Nickel Silver Plated Goods, Baths, Brushes and Turnery, Lamps and Gaseliers, Iron and Brass Bedsteads, and Bedding, all arranged in Sixteen Large Show-rooms, as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere

Illustrated Catalogues sent (per post) free.

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established 1820.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 61 and 85, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO STONEMASONS, BUILDERS, RAILROAD CONTRACTORS, AND OTHERS.

RICH. RICHARDS and SON, 95, New Park-street, Southwark, London, Manufacturers of TRAVELLING CRANES and JENNIES, to span from 9 to 50 feet, on the latest and best principle, warranted to lift from 5 to 30 tons, or upwards. Grab A Cranes, double and single purchase; stone saws, hammered and of the best quality, suitable for Portland stone or marble, made to any length; also saws for Caen and Bath stone. Blocks of all sizes, inserts of one, two, and three sheaves, or singly. Chain, suitable for the blocks, for hoisting any weight, made of the best iron, and tested by patent machinery. Lifting or screw-jacks of all kinds, double and single purchase traversing cranes for railways, and cranes and hoisting-tackle of every description to order or by estimate.

PAPIER MACHE AND CARTON PIERRE WORKS,

40, RATHBONE PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and the trade in general to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV XV. XVI. and many other styles; also rich Pannel Panel decorations, Elizabethan and Gothic Dados, Door Traverses, Column and Pilaster Caps, all executed in the best manner and style of art.

The large and well-selected experience of GEORGE JACKSON and SONS, in decorations of Drawing and of Reception Rooms, enables them to execute the building plans of which they have had the honour of receiving from Architects of the highest eminence, orders them with confidence to correct notice to that branch of the business

The Author will endeavour in the several chapters to define the apparent origin, and trace the leading principle of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles and those which are peculiar to each. It will further attempt, in the final chapter, to show what is wanting, bearing in mind those general laws which it has endeavoured to unfold, the works of future and present time for fresh inspiration, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to produce a work from its own resources, which shall, following in the footsteps of the past.

The select number of examples which will be given in each chapter, has been the labour of months. Every care has been taken to secure fidelity and truth, nevertheless it is with these Examples and all others engraved in any work in the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to strive them an amount of

METROPOLITAN LOAN COMPANY,

Established 1830.

1, CRAVEN-STREET, STRAND, LONDON.

Loans are advanced in amounts varying from 10l. 10s. to 100l. repayable weekly or otherwise, as may be agreed upon, at a discount of 24 per cent for twenty five weeks, and for 50 weeks at 5 per cent.—Forms may be had, price 3d.; if by post, three postage stamps to be enclosed.

ROBERT NORTON, Secretary.

The Builder.

Vol. XIV.—No. 678.

MR. FERGUSSON'S "Illustrated Handbook of Architecture"* having been already commended, as we have reported, from the Chair of the Royal Academy, favoured with a column and a half of praise in the *Times*, and flatteringly mentioned by leading literary journals, is in need of little more to make it known to the public, and ensure for the ability and labours of the author, and the enterprise of the publisher, the reward justly their due. A reactionary and not uncommon feeling might indeed suggest that all we had now to do was to point out its weaknesses, combat its theories, and speak rather of what the author had omitted to do than of what he had done. What would be easier, and what more agreeable to the majority of readers? Nothing. Nevertheless, we have no intention of taking this course. We have already given the Handbook a general expression of praise, and are fully prepared to confirm that expression in detail.

Objections we have, some of them strong ones, and to these we shall allude; but it must not therefore be inferred, even though they should occupy the greater part of our notice, that we do not warmly admire and thankfully receive the very valuable book which Mr. Fergusson has produced. First, let us tell our country readers, who are often unable to see previously the book they would buy, that the two volumes contain together 991 pages of letter-press with 837 engravings on wood interspersed. The first part (and volume) consists of nine books:—Buddhist and Jaina Architecture; Hindu Architecture; Architecture in China and America; Architecture in Western Asia; Egyptian Architecture; Grecian Architecture; Roman Architecture; Sassanian Architecture; and Saracenic Architecture; the whole preceded by an introduction, thirty-three pages in length. In the second part (and volume) we have ten books:—Romanesque style; Lombard and Rhenish Architecture; Gothic Architecture in France; in Germany; in Belgium; in Italy; in Spain and Portugal; in Great Britain; in Northern Europe; and the Byzantine style. Some of the pith of other books by the author, "The Principles of Beauty in Art," and "The Palaces of Nineveh and Persepolis Restored," is here incorporated, together with cuts from the same works. And we may say of the latter generally, namely, the cuts, that all available sources have been laid under contribution to supply them, and that thus brought together, they afford most excellent means for comparison. The plans are drawn to one scale (100 feet to 1 inch), and thus enable the reader to judge of the relative size of two buildings, without seeing them. As a general rule, the sections or elevations of buildings, throughout the book, are drawn to a scale double that of the plans, or 50 feet to 1 inch; but, owing to the great size of many of these, it was found impossible to carry out this in all instances: where it has not been effected, the departure from the rule is noted, either below the woodcut or in the text.

The author's travels and previous researches have led him to give an undue preponderance to his accounts of some styles as compared with those of others: for example, the two books devoted to Buddhist and Hindu architecture occupy 132 pages, while Grecian architecture, to which the ruins that remain, confined though they are to temples and monumental erections, assign "the rank of the purest and most intellectual of all the styles which have yet been invented in any part of the world," occupies but thirty. In this chapter on Greek art, speaking of the Doric, he thus expresses his opinion on the subject of *polychromy*:—

"Another essential part of the order, too often overlooked, is the colour, which was as integral a part of it as its form. Till very lately, it was denied that Greek temples were, or could be, painted: the unmistakeable remains of it, however, that have been discovered in almost all temples, and the greater knowledge of the value and use of colour which now prevails, have altered the public opinion very much on the matter, and most people admit that some colour was used, though few are agreed as to the extent to which it was carried.

It cannot now be questioned that colour was used everywhere internally, and on every object. Externally, too, it is generally admitted that the sculpture was painted and relieved by strongly coloured backgrounds: the lacunaria, or recesses of the roof, were also certainly painted, and all the architectural mouldings, which at a later period were carved in relief, have been found to retain traces of their painted ornaments.

It is disputed whether the echinus or curved moulding of the capital was so ornamented. I think it undoubtedly was; and the walls of the cells were also coloured throughout, and covered with paintings illustrative of the legends and attributes of the divinity to whom the temple was dedicated, or of the purposes for which it was erected. The plane face of the architrave, I believe, was left white, or merely ornamented with metal shields or inscriptions, and the shafts of the columns seem also to have been left plain, or merely slightly stained to tone down the crudeness of the white marble. Generally speaking, all those parts which from their form or position were in any degree protected from the rain or atmospheric influences seem to have been coloured; those particularly exposed, to have been left plain. To whatever extent, however, it may have been carried, these coloured ornaments were as essentially a part of the Doric order as the carved ornaments were of the Corinthian, and made it, when perfect, a richer and more ornamental, as it was a more solid and stable, order than the latter. The colour nowhere interfered with the beauty of its forms, but gave it that richness and amount of ornamentation which is indispensable in all except the most colossal buildings, and a most valuable adjunct even to them."

The arrangement of the chapters on the different styles does not seem to us that best adapted to leave a clear notion of the relative dates in the mind of the student; and there is, as it seems to us, a want of accentuation, so to speak, throughout the book, by means of which the chief resting-places and starting-points in the journey might have been made clearer to those desiring to remember them. The arrangement made was not adopted without consideration, as the author points out in the preface. He deliberated between the strictly chronological and the purely topographical, and ultimately adopted a combination of the two methods; but when we find this places Indian and Chinese architecture at the commencement of the work, before the Egyptian and Assyrian; and the account of Byzantine architecture after all others, at the end of the second volume,—the propriety of the decision is made to appear doubtful For another edition it should be reconsidered. We would also suggest, though in no captious spirit, that a clear statement of the characteristics of the various styles, and their differences, would render the work more valuable; nor must we omit to say, that the omission of all account of the architects of the Revival, and their works, in a book professing to describe "the different styles of architecture prevailing, in all ages and countries," is scarcely defensible. The style is not ignored, because in the Introduction, Mr. Fergusson says, it has been practised for more than three centuries, and that "from the building of St. Peter's, at Rome, to that of our own Parliament Houses (?), not one building has been produced that is admitted to be entirely satisfactory, or which permanently retains a hold on general admiration;" but beyond this we do not find any mention whatever made either of the men or of their works.

In our notice of Mr. Petit's lecture last week, we said that the object he had in view was to inculcate the necessity for the acquirement of knowledge by architects of the materials obtainable, that they should attend to the purposes of the building they had to design, and strive above all things to act on sound principles of construction as the means of arriving at excellence; and we remarked that it was urged "almost as if in denial of a doctrine put prominently forward by Mr. Fergusson in his ably-written and profusely-illustrated Handbook." "Architects," said Mr. Petit, "must be guided by utilitarian views: they have no right to overlook or compromise in the smallest degree, the original purposes of the buildings they have undertaken, for the sake of ornament, be it of the highest order."

On this Mr. Fergusson has addressed to us the following communication:—

"I regret to perceive from the commencement of your leading article of last week, that I should have been so far misunderstood as to be represented as antagonistic in my views to those expressed by Mr. Petit in his lecture on Tuesday last. So far from this being really the case, I can honestly assert that it has never been my good fortune to listen to a lecture on an architectural subject, with every sentiment of which I so cordially agree, as I did with those expressed in the lecture in question. There was not one expression used by Mr. Petit from which I differed, or one opinion uttered by him that I could have hesitated in adopting in the Essay referred to.

I take the liberty of addressing this letter to you, as I am anxious that the idea of our disagreeing should not go abroad uncontradicted, inasmuch as it is a source of great gratification to me to find a gentleman of Mr. Petit's position and abilities arriving at the same conclusion as I have done, though hitherto an entire stranger to me personally, because the fact of two independent inquirers agreeing in everything as we do in all essential parts of our subject, may give to others confidence in the conclusions we have arrived at. Jas. Fergusson."

The observations to which we alluded are these, and occur in the Introduction.

"The art of the civil or military engineer [says our author] consists in selecting the best and most appropriate materials for the object he has in view, and using these in the most scientific manner, so as to ensure an economical but satisfactory result. Where the engineer leaves off, the art of the architect begins. His object is to arrange the materials of the engineer, not so much with regard to economical as to artistic effects, and by light and shade, and outline, to produce a form that in itself shall be permanently beautiful."

And afterwards, although it is said that it is indispensably necessary that the architect should understand construction, Mr. Fergusson thinks it would be well if "he could delegate the mechanical part of his task to the engineer, and so restrict himself entirely to the artistic arrangement and the ornamentation of his design." Again, "This division of labour is essential to success," he says, and "a building may be said to be architectural in the proportion in which the artistic or ornamental purposes are allowed to prevail over the mechanical."

Now surely the teaching is not the same in both these instances, but would rather lead to opposite results, in the case of Mr. Petit rendering the architect chief workman, as he should be, and as the title imports, and in the other case the ornamentist only. To this separation of the constructor and deviser from the ornamentist, we have the greatest objection, as we have long ago and often expressed, and we shall be glad if Mr. Fergusson be led to show that his views are more in unison with our own in this respect than the paragraph we have quoted would seem to show.

Let us now give two or three disjointed opinions from the book. As to the *Stone Roofs* of the Middle Ages, Mr. Fergusson says, when speaking of the Roman Basilicas:—

"The roofs of these halls [the basilicas] had one

* "Being a concise and popular Account of the different Styles of Architecture prevailing in all Ages and Countries." In 2 vols. London: Murray. 1855.

tic point of view, than any which can be attributed to the Gothic, but they are not so intimately inwoven in the system. If by their removal the style would cease to be Italian, it would still remain a very good style, and one of great promise, though as yet far from complete. I am not urging the invention of a new style, but the development of one whose elements have existed, and that not in a state of inactivity, ever since the first use of the arch. The railway sheds I have mentioned, the Cornhall at Lille, the front of St. Luke's Hospital, the chapel of the Foundling, the church of St. Benet, abundantly prove to me the possibility of such a development. For plain buildings we have already all we want: the selection and application of ornament require the mind of a master.

I will now conclude by repeating briefly what it has been my object to inculcate. That a strict attention to the purposes of the building you design, a sound principle of construction skilfully carried out, and the knowledge how to make the most of the material entrusted to you, with the resolution to do so, will ensure a certain degree of excellence, and probably be the foundation of much more. By themselves they may not raise your work to the rank of an architectural composition, but they will be a sure groundwork for rules which may enable you to place it in the very highest order. If you value picturesqueness, depend upon it that what results from these elements, without your aiming at it, or thinking of it at all, is the only picturesqueness worth anything. Of real beauty and sublimity the only sure basis is truth, and that is the very thing I am recommending. This will teach you to give propriety and meaning to your purely architectural ornaments, and to dispose in the best manner, both for themselves and for your own work, those which you borrow from a sister art; and whatever style you may adopt, it will urge you to purify it of its errors in the best way you can, rather than to rest quietly and contentedly under the consciousness of their existence.

J. L. Petit.

"BREADTH" IN ARCHITECTURE.

Will you afford space in your periodical for a few observations from a non-professional, induced by the excellent article on "Nash, Schinkel, and Modern English Architecture," which I read with some interest in your journal not long ago.*

I am not about to venture on any purely architectural remarks, nor yet to attempt any defence of Mr. Nash's claims to talent or genius in his art, although I *do* think that professional rivalry, and also some degree of soreness, at his having enjoyed so large a share of royal and other patronage, may in some degree have led to his faults being exaggerated, and his merits ignored or depreciated beyond what in justice he deserved. Taste he most certainly had; and although it might have been more favourably displayed *within* than *without*, yet I am far from being convinced that the present external appearance of Buckingham Palace is a very great improvement. But what I am about to advert to in respect to the article in question will be the observations therein contained upon Breadth —that quality "so difficult to define in words," but so valuable, so almost indispensable an element in any work of art, be it painting, sculpture, or architecture (and I would add poetry and music also), that its absence, to one who has learned to relish and appreciate it, can hardly be atoned for by any other excellence, be it ever so great. But how rare is it—how seldom do we meet with it in either of these arts—more especially of modern days? The ancients, and in particular those marvellous old Greeks, are still immeasurably ahead of all who have succeeded them—at least, in those remains of architecture and sculpture which have escaped the ravages of time. How are we to account for this? Was the cause in the artists themselves, or had external influences their effect in producing, or at least in aiding, the development of this quality? And might not their habit of being so much in the open air, and of course viewing objects much under the "skyey influences," have so acted upon the organ of vision as to make it more than ordinarily capable of feeling this quality,—in fact, of rendering it a normal and as it were natural state, "operating itself unseen," so that they did that unconsciously, as it were, which we often strive to obtain intentionally, but often without realizing? I sometimes think so; and my opinion would seem to be countenanced by the remarks in the article in question, on the advantage to be derived from the study of landscape-painting, as forming part of an architect's education. Did not Gainsborough's practice as a landscape-painter contribute to give that great degree of breadth we see and admire in his portraits? And many of Reynolds's best works are those in which landscape forms a considerable portion; executed, too, in a style which proves that he must have devoted no small share of attention to the study; and, indeed, there is nothing so well calculated to train the eye to perceive objects in a broad, harmonious unity of effect.

An architectural design should, in my humble opinion, carry breadth on the face of it, even in outline; and I would have committees or other parties inviting designs to be sent in for any proposed building, insist on such being executed in one colour alone—*sepia* or *bistre*—or at the utmost with a sparing use of indigo, just sufficient to create a slight opposition of warm and cool tints.

G. J. R.

* Vol. xiii p 585.

SIR JOHN VANBRUGH.

I have been greatly pleased with the information to be found from time to time in *Notes and Queries* respecting Sir John Vanbrugh, of whom I have something new to tell, and about whom I am still desirous to know more.

Sir John was buried in that masterpiece of Protestant church architecture, St. Stephen's, Walbrook, in London, as appears by the parish register:—

"1726. March 31. Was buried Sr John Vanbrough in ye North Isle."

Why was he buried in Walbrook? The inference is that his family was in some way connected with the parish; and this inference is confirmed by the parish register, for the following extracts from which I am indebted to Mr. Crosby:—

"1628. Sept. 25. Was bapt^d^ William ye sonn of Gillis Van Brugh and Mary his Wyff.
1631. Aprill 27. Gyles, the sonn of Gyles Vanbrugh, Marchaunt, and Margarett his Wyfe, was baptysed.
1656. Nov. 13. Was borne a still borne child of Mr. William Vanbruggs.
1657. Jan. 1. William, the sonn of Mr. William Van Brugg, Marchant, and Mary his wife, was baptised.
1659. July 6. Was born Dudley, the sonne of Mr. William Vanbrugge, Marchant, and Mary his wife, and was baptised the 13th July."

These, I am informed, are the whole of the entries in the register of St. Stephen's, Walbrook, relating to the Vanbrugh family.

These extracts are important. Of Giles Vanbrugh, the son of a merchant in Walbrook, we are told that he married Elizabeth, daughter of Sir Dudley Carleton, of Imber Court, in Surrey; hence doubtless the Christian name of *Dudley* mentioned in the above extracts.

Mr. T. Hughes, of Chester, tells us (*N. and Q.* 1st S. viii. 232) that Giles Vanbrugh died at Chester, and was buried in Trinity Church, in that city, July 19, 1689.

Was this the father of the dramatist and architect? I suspect he was. Has his will been looked into?

I have examined Sir John Vanbrugh's will in Doctors' Commons. In his will he mentions two brothers, Charles and Philip (Captain Philip Vanbrugh is a subscriber, with Sir John, to Tickell's "Addison," 4 vols. 4to. 1721), and three sisters, Mary, Robina, and Victoria. Two of these names are unusual. They should serve as a clue to the discovery of the father of the dramatist. Will Mr. T. Hughes, of Chester, kindly inform me if Robina and Victoria are among the names of the daughters of Giles Vanbrugh, baptised in Trinity Church, Chester?

Let me add, that the extract from the "Life and Death of Matthew Henry" (1716), printed in *N. and Q.* (1st S. viii. 480), confirms the supposition that the father of the dramatist was connected with the city of Chester.

Sir John wrote his name in *three* different ways: Vanbrook, Vanbrug, and Vanbrugh. I have seen instances of all three.

There were yet other ways of spelling the name. I have seen it as Vanbergh, Vanbright, Van Beringbrooke, and Van Berenbrocke.

Philip Van Berenbrocke was made one of his Majesty's falconers by warrant under the signet, dated April 22, 14 Charles II. and was paid as such by the Treasurer of his Majesty's Chamber. Giles Vanbrugh (we are told by the biographers of the dramatist) was Comptroller of the Treasury Chamber. But this I doubt. Was there such an officer?

I will ask leave to add another note about the Vanbrugh family, hitherto unnoticed:—

Register of Requests, 1660—1670, *Add. MS. Brit. Mus.* 5759.

"5 May, 1663.

"John and James Vanbergh.

"That y^r^ Pet^rs^ are both twinnes, and borne in London, and for some yeares past have employed a stock left them by their grandfather in a course of merchandizing. Yet some, out of spight, go about to hinder their trading, in regard their father was an alien, though their mother an English woman, and themselves have not attained ye full age of xxj yeares. Prayes y^r^ Ma^tyes^ dispensacon wth their innocent disability, and that they be permitted to trade, &c. His Ma^ty^ having beene moved in this Peticon, his pleasure is, that Mr. Attor^y^, or Mr. Sol. Gen^ll^, doe prepare a Bill for his Ma^tyes^ royal signature, conti^g^ a grant and liberty to ye Pet^rs^ to traffiq, as by them is humbly desired."

Peter Cunningham.*

* From *Notes and Queries*.

THE ABBEY KITCHEN AT FONTEVRAULT.

I am surprised that so accurate an observer as Mr. Petit, and one so intimately acquainted with French antiquities, should mistake the kitchen of the Abbey at Fontevrault for a chapel, particularly as it is so well known a specimen of the abbey kitchen, and so closely allied in form to that at Glastonbury. It will be found carefully figured in Mr. Hudson Turner's volume on "Domestic Architecture," as well as in several French antiquarian works. Its construction scarcely answers to M. Petit's description, inasmuch as the apses, or fireplaces, are attached to the *sides* of the octagon, each side having its own arch and apse. The appearance of their attachment to the *angles*, is only external, and arises from the peculiar manner in which the diameter of the octagonal spire is reduced at its base, from that of the primary octagon, first by reducing it to a square by four arches springing from alternate angles (much as those described by Mr. Petit in the tower, at Antwerp), and then by small arches, or "squinches," across the angles of the square as usual in ordinary spires. This has the effect of changing the direction of the sides of the octagon, and making the fireplaces appear externally to be placed against its angles instead of its sides. Mr. Turner says of this part,—"Between the top of the apsidal vaults and the springing of the spire, there is an interval of modern masonry, and it is here that the shafts of the chimneys have been cut off. It would appear that they were originally carried up in straight shafts, resembling pinnacles round the base of the spire, but there is no positive evidence of this. The flues cannot be traced more than a few feet from the lower opening, but two artists who have furnished sections of the building have both drawn the flues straight up as far as the base of the spire, where they appear to be cut off." The arrangement of these flues probably influenced the design, and should be taken into account in estimating its merits.

I only trouble you with this notice of an accidental error, which you will no doubt have observed, from the feeling that in utilitarian criticism a knowledge of the uses of the building is essential; and because in this case the external appearance has led to a misapprehension of the actual construction. I have no

doubt that the object of this somewhat intricate contrivance was to add strength to a pyramidal stone roof of upwards of 40 feet in diameter, and to bring down its bearing to a level only half way up the walls, instead of their top, which would have been in all probability incapable of sustaining it. G. G. SCOTT.

I presume I cannot have mistaken the building alluded to, though on second thoughts I can scarcely fancy its being taken for a chapel, particularly as no allusion is made to the pyramidal roof, its most striking feature. I must plead guilty of the frailty of finding one's thoughts, towards the close of an archæological day, insensibly turning from the subject in hand towards a modern and strictly utilitarian *cuisine*, and possibly such may have been the case in the present instance.

HOW TO MAKE A FIRE IN A COMMON GRATE WHICH SHALL SAVE HALF THE COAL AND BURN THE SMOKE.

CLEAN out your grate: cover the bottom with a sheet of paper, cut or folded to fit: place your coals in the grate to the level of the top bar, keeping the larger ones to the front to prevent waste. Light your fire on the top, and allow it to burn downwards undisturbed. An ordinary fire, prepared and lighted in this way, will, according to the size and form of the grate, burn six, eight, or ten hours without any renewal of coal, burning brighter and warmer than if lighted from below, as fires are ordinarily made.

The coal should be tolerably equal in size, something like Macadam stone: place the large to the front, the small to the back. The paper is put in the grate to prevent any air rising through the bottom bars. The fire is lighted on the top, and made to burn downwards, to prevent rapid combustion, and to keep the heat at the surface,—the coals, "cinder," or "coke;" and, if undisturbed, the combustion will be so complete, that there will be no waste ashes.

The grate must be cleaned each morning, and the paper must be renewed on the bottom of the grate as it is burned when the fire reaches the lower stratum of coal. The writer and his friends have made their fires, as described, for some weeks, and can vouch for the "saving of coal," the cheerfulness and warmth, and freedom from smoke. In principle, this mode of fire-making resembles that in Dr. Arnott's patent grate, which is fed from below: any smoke must ascend through the fire; and, in doing so, is burned. Some grates may present more difficulties than others, and servants object to the innovation. It is "*beggarly*:" it is "*mean*," &c. My servants, now they have learned how to make such fires, approve of the plan, as "*the grates are not so dirty nor so difficult to clean as formerly*." Think of saving half the coal and most of the smoke from the 300,000 house fires in the metropolis! This is a smoke-consuming feat worth advocating, and, with individual attention and care, may be accomplished. Kitchen fires must, I fear, be exceptional.

ASSISTANCE TO THE EYE IN THE PERCEPTION OF COLOUR IN PICTURES.

EVERY one knows that owing to the peculiar relation that colours have to each other, it is difficult, in arranging a collection of pictures, to prevent them injuring one another: but the fact is not "so generally familiar, that *the impression produced by a colour upon the eye does not cease immediately the eye is removed from the colour*."

Mr. Sydney Smirke, A.R.A. has recently addressed a letter to Sir Charles L. Eastlake, P.R.A. directing attention to this circumstance, and suggesting a remedy. "Let any one," says Mr. Smirke, "who wishes to receive a full measure of enjoyment in a picture gallery hold in his hand a *tablet painted of a neutral tint*, on which to rest his eyes as he passes from one picture to another. Has his eye become inebriated by some florid colorist? A draught of the neutral tint on his tablet will sober it down, and bring it to the full use of its senses. Has he been contemplating a glowing Italian sunset, or 'A Masquerade at Naples?' a glance at his tablet will prepare him for the next picture, perhaps 'A Mist in the Highlands.' By means of his tablet his eye becomes, on each occasion, a tabula rasa,—a cleansed pallet, prepared to receive a fresh assortment of colours. Its discriminating powers are restored; its bias corrected; and thus each picture will stand on its own merits, unimpaired by the disturbing effects produced by the impression left behind by the subject of the spectator's previous examination. A late eminent medical writer on cookery recommended that a saline, or other appropriate draught should be administered to the cook on the eve of a banquet, so that his, or her, taste might be purified and rendered so sensitive as to secure to each *entrée* and condiment the exact flavour that shall best recommend it to the fastidious gastronomer. Very analogous to this would be the operation of the proposed tablet upon the powers of the eye: it would 'purge the visual ray,' and so fit it to discern and appreciate the niceties of the colorist."

In the case of landscapes, where it is desired that the eye should appreciate tints of green, the writer suggests that the reverse of the tablet, a blank page in the catalogue for example, where there is one, should be coloured with a deep, pure, but not bright, *red*. Let the eye absorb a dose from this side before it contemplates a landscape, and it will be at once found to have been brought into a right condition for duly appreciating the artist's labour.

CHURCH-BUILDING AND PROVINCIAL NEWS.

Ely.—The cemetery works for the two parishes in this city are now ready for use. The whole works have been finished, including fencing and laying out of grounds, by Mr. R. Freeman, in about nine months.

Rougham.—The church here, which has long been in a sadly dilapidated condition, is now in progress of being restored. The arch of the tower in the interior was till lately blocked up by a cumbrous and unsightly gallery; but this has now been removed, so as to increase the area of the church and add the western arch and window to the view. The lower floor of the tower will now be converted into a baptistery. The nave roof, which has long been in a mutilated and dangerous condition, has been repaired. The roofs of the aisles have also been made secure. The stonework of the arches, pillars, windows, &c. is being divested of numerous coats of whitewash, the accumulation of ages, prior to being cleaned and restored. This preliminary process has brought to light a representation of the "Doom," or "Day of Judgment," over the nave arch, treated in the mode so generally adopted in the fifteenth century. The floor of the church is to be cleared of close high pews, to make way for oak seats, to correspond in style with the many old open seats that remain in the nave. A new carved oak pulpit, with desk attached, is also to be supplied. The centre floor is to be laid with red and black terro-metallic tiles; but the old monumental slabs will be relaid, and that bearing the brasses of Sir Roger Drury 1418, and Margery, his wife, 1405, will, by the re-arrangement of the sittings, be rendered more easy of access to the ecclesiologist. The works are being carried out under the direction of Mr. J. Johnson, of Bury, architect, by Mr. J. Rednall, jun. of Woolpit, contractor, at a cost of about 750*l.* to be raised by a rate extending over a period of six years.

Portsmouth.—A painted window has been placed in St. Jude's Church at Miss Selby's expense, in memory of a brother. The central compartment has the figure of the Saviour. The side bays are filled with figures of the four evangelists. The figures are somewhat larger than life, and stand in canopies of Gothic work. The remaining part of the window is arranged in architectural devices, interspersed with angelic figures. The window was designed and executed by Mr. Wailes, of Newcastle.

Titchfield.—A new Infant School here was opened on 17th ult. The vicar, during the past year, raised 300*l.* leaving 20*l.* to defray the cost of building the master's house and infant school.

Winchester.—Mr. Myers, the builder of St. Thomas's Church, having agreed to complete the tower and spire of it for the sum of 1,456*l.* his offer has been accepted by the committee for carrying out the work, which, it is expected, will be commenced in March.

Bristol. — Thrissell-street Baptist Chapel, which was destroyed by fire last winter, having been rebuilt, was opened on Wednesday before last. The walls have been raised, and the whole of the front wall above the entrance-portico, and which formerly stood back some feet, has now been brought out over and in a line with the front of the portico. This gives space for a deep front gallery. There are no side galleries as in the old chapel. This leaves the interior open. The pews in the body of the chapel, as also in the gallery, are low and wide; the whole made of deal, stained and varnished, with oak cuppings. The pulpit is large, and more like an enclosed platform than an ordinary pulpit. The roof of the chapel is partly open, being ceiled in a line with the collar pieces of the principals, the timber of which shows, and is stained. The body of the chapel is 48 feet long, and 38 feet 3 inches wide, and will seat 310: the gallery will seat 140. The elevation is simple: it partakes of the plain Italian style. In addition to, and against one side of the chapel, a school-room and class-room have been built, the school-room opening into the chapel, but having a separate external entrance. The original estimate for the chapel was 622*l.* to which have to be added the cost of the new school-room, and extra work, making a whole calculated at 870*l.* The architect was Mr. Henry Crisp, of Bristol; and the builder, Mr. John Neale, of Bedminster.

Liverpool.—On Monday before last, a certificate, acknowledging the completion of the last contract for the Liverpool Corporation Water Works, was given to Messrs. Miller and Lawton, the contractors, by Mr. T. Hawksley, the engineer. The contractors made their total account to be 51,288*l.* 11s. 1d. of which they received 33,000*l.* The remaining balance of 18,288*l.* 11s. 1d. contained some items which were disputed by Mr. Hughes, the deputy town-clerk of Liverpool, with whom there was also Mr. Statham, the resident engineer. It was expected, says the local *Times*, that the items would be investigated by the examination of witnesses who could speak to the various measurements, &c.; but on its being known that Mr. Hawksley had an independent record of all that had been done, both parties agreed to refer the accounts to his decision. The certificate of absolute completion is to be given when the reservoir is full, which is expected to be the case in a week or two.

Cockermouth.—A clock and chimes are to be put up in the tower of Cockermouth Church, at a cost of between 200*l.* and 300*l.* provided by Mr. Steel, M.P. and Mr. Wilson. The order has been given to Mr. Blaylock.

Wigan.—The local Poor-law Guardians have resolved, on the recommendation of the new workhouse building committee, that the works in connection with the new workhouse be let to one contractor, with a proviso that the sub-contractors named by him are satisfactory to the guardians or building committee; and that the tender of Mr. James Fairclough, builder, Wigan, to execute the various works in conformity with the specifications and contract, for the sum of 13,810*l.* be accepted, it being the lowest general tender offered. The tender of Mr. Fairclough in detail, omitting shillings and pence, is as follows: — For general trades, 13,810*l.*; including brickwork, 3,266*l.*; masonry, 3,437*l.*; carpenters and joiners, 4,434*l.*; slating, 827*l.*; plumbing and glazing, 1,022*l.*; plastering and painting, 821*l.* No time will now be lost in commencing the works.

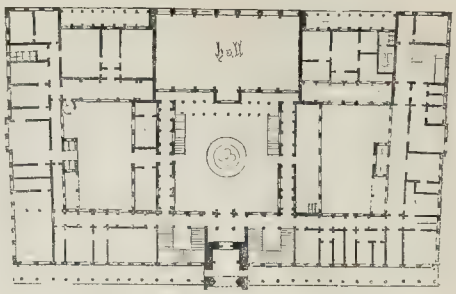
Sunderland. — The extensive workshops belonging to Messrs. Lumsden and Sons, iron-founders, Strand, Monkwearmouth, are now in the process of being removed, and the buildings are being erected of iron. The sides, says the *Gateshead Observer*, are constructed of rows of flat iron pillars, the spaces between which are filled by stout iron wire. The roof is formed of an arch of corrugated galvanized iron.

Elgin.—Elgin, says the *Forres Gazette*, has begun again, after a short pause, to start in the

building line with vigour once more. On the 14th January contracts were entered into for a house in the Elizabethan style, designed by Messrs. A. and W. Reid, architects, and to be the property of Mr. James Watson, Lhanbryde, of the firm of Messrs. Urquhart and Watson, who have done much in the erection of new buildings to decorate the south side of the town. This house is to be erected at the east end. It consists of 10 and 11 feet flats, with four oriel windows in front, with an ornamented door-piece. The contractors for the work are,—mason and slater, Mr. F. W. G. Urquhart; carpenter, Mr. James Macbeth; plasterer, Mr. Jos. Stuart; plumber, Mr. John Gordon. Another building in connection with the North of Scotland Bank is to be raised on the site of the old Trades' Hall. Plans having been drawn by the Messrs. Reid, and approved of, it will be proceeded with. It will tend to improve the central part of the town.

LECTURE ON LABOUR, BY DR. WARREN.

The hall of the Hull Mechanics' Institute was filled, on the 3rd January, to overflowing, by a very attentive audience of all classes, who came to listen to an eloquent lecture by their Recorder, Mr. S. Warren, Q.C. on "Labour,—its Rights, Difficulties, Dignity, and Consolations." The lecture, at full length, has appeared in the *Hull Packet*, and Mr. Warren handed the MS. to the Mechanics' Institute authorities, at their request, for publication in a separate and cheap form.



After some reflections on the general subject, in which the lecturer claimed for those engaged in mental labour a distinguished place among the working classes, he proceeded to treat of the rights of labour: these he summed all up in these words, "Labour in England, and in all her dominions all over the world, is free." In respect to our West Indian colonies, Dr. Channing, the American, was quoted on the conduct of this country in not only abolishing West India slavery, but doing it at a prodigious pecuniary sacrifice:—"Great Britain, loaded with an unprecedented debt, and with a grinding taxation, contracted a new debt of a hundred millions of dollars to give freedom, not to Englishmen, but the degraded African. I know not that history records an act so disinterested,—so sublime. In the progress of ages England's naval triumphs will necessarily shrink into a more and more narrow space in the records of our race, but this moral triumph will fill a broader, brighter page." But what, continued the lecturer, is really signified by the expression that labour is free in England? Simply this: that subject to two or three exceptions founded on reason, justice, and humanity, every British subject may work at any kind of labour for any person, anywhere, for any recompense, and for any space of time, that may be agreed upon between him and another. It is no longer ago than 1825 that all Acts were repealed which, under very heavy penalties, prohibited a British artisan from going abroad! He is free now, therefore, to compete with the artisans of the whole world in ingenuity and industry. And when I say that a man may agree to serve for any length of time, I mean that he may, if he choose, contract to work for his whole life, according to the law of England, which, in this respect, differs from that of France, where such a length of service is deemed inconsistent with personal freedom.

The man who sells his labour to another must perform his contract in every respect with as punctual good faith as is required from the party purchasing it; or not only lose all advantage from it, but subject himself to liability, either by a civil action or criminally, under the provisions of various statutes passed for the protection of persons carrying on great manufactures, who might be quickly ruined but for a summary remedy being afforded.

Some strictures were then passed on the practice of truck, and some remarks made on the restriction of the hours of labour, and the work of women and children. The evils resulting from trade combinations, were dwelt on at some length, and the past and present state of the law on the subject pointed out. The lecturer could suggest no specific for the malignant disorders connected with this culminating point in the freedom of labour, except that true Christian feeling which as effectually prevents as cures them.

Having taken a comprehensive, and he hoped a correct view, of the rights of labour, all really resolvable into its freedom, the lecturer proceeded to remark, that it had already been seen that the exercise of these rights of itself suggests many of the difficulties with which labour has to contend, and these often of a serious and severe character. Besides these, however, it had others to arm against. Ignorance and unwholesome dwellings were then dwelt upon at some length, in connection with their proper correctives and antitheses: so with improvidence and intemperance, on which latter subject the lecturer also expatiated.

The difficulties of labour were finally taken leave of, by a short quotation from Edmund Burke, as consolatory in hours of fatigue and depression:—"Difficulty is a severe instructor, set over by the supreme ordinance of a parental guardian and legislator, who knows us better than we know ourselves, as he loves us better, too!" With this healthy tone communicated to our feelings, continued the lecturer, let us approach the last department of the subject, and see whether labour, though it have its serious difficulties, has not also its dignity and consolations—aye, real dignity, and rich consolations. It was then boldly laid down, that with free and virtuous man there is no kind of labour that cannot be invested with dignity—a dignity depending on the spirit in which labour is undergone, the objects for which it is undertaken. Even compulsory labour, and designed to be degrading — the labour of the felon—might be performed with dignity, if the unfortunate labourer were conscious that he was the victim of injustice. In considering the consolations of labour, the speaker, in conclusion, gradually ascended from all other and more earthly consolations, to those higher and more secret sources of strength which brace the nerves, strengthen the arms, and support the heart of the virtuous workman; so that even should he lose the favour of an earthly master, he serves a heavenly one, whom he shall, by-and-by hear, when he has rested from his labours, saying—"Well done! thou good and faithful servant!"

PLAN OF HOTEL DE VILLE, HAMBURGH.

THE HOTEL DE VILLE, AT HAMBURGH.

The selected design for the proposed Rathhaus, or Hôtel de Ville, at Hamburgh, has many and great beauties, in spite of an objection to a portion of it, which occurred to us on first seeing the drawing in the Exhibition at the Royal Academy; and, when carried into execution, will increase the already sufficient fame of the author of it, Mr. G. G. Scott. Our engraving represents the principal front (the top of the spire being cut off, to prevent too great reduction of the view), and we add a small plan, to show the internal arrangement. The building will be a complete Government house, embracing all the various offices required for the different departments of the Government of an independent state and a great commercial city. The leading departments are as follow:—

1. That for the senate; comprising a large hall and several committee-rooms, offices, waiting-rooms, rooms for archives, &c.

2. That of the representatives of the citizens; consisting of a hall of great size, in which the senate and citizens meet every month for the discussion of matters of state; committee-rooms, and rooms for the representatives of the several parishes into which the city is divided.

3. The financial department; embracing that of direct taxes, those of indirect taxes, customs, excise, and stamps; offices for the regulation of trusteeships, the property-tax department, &c.

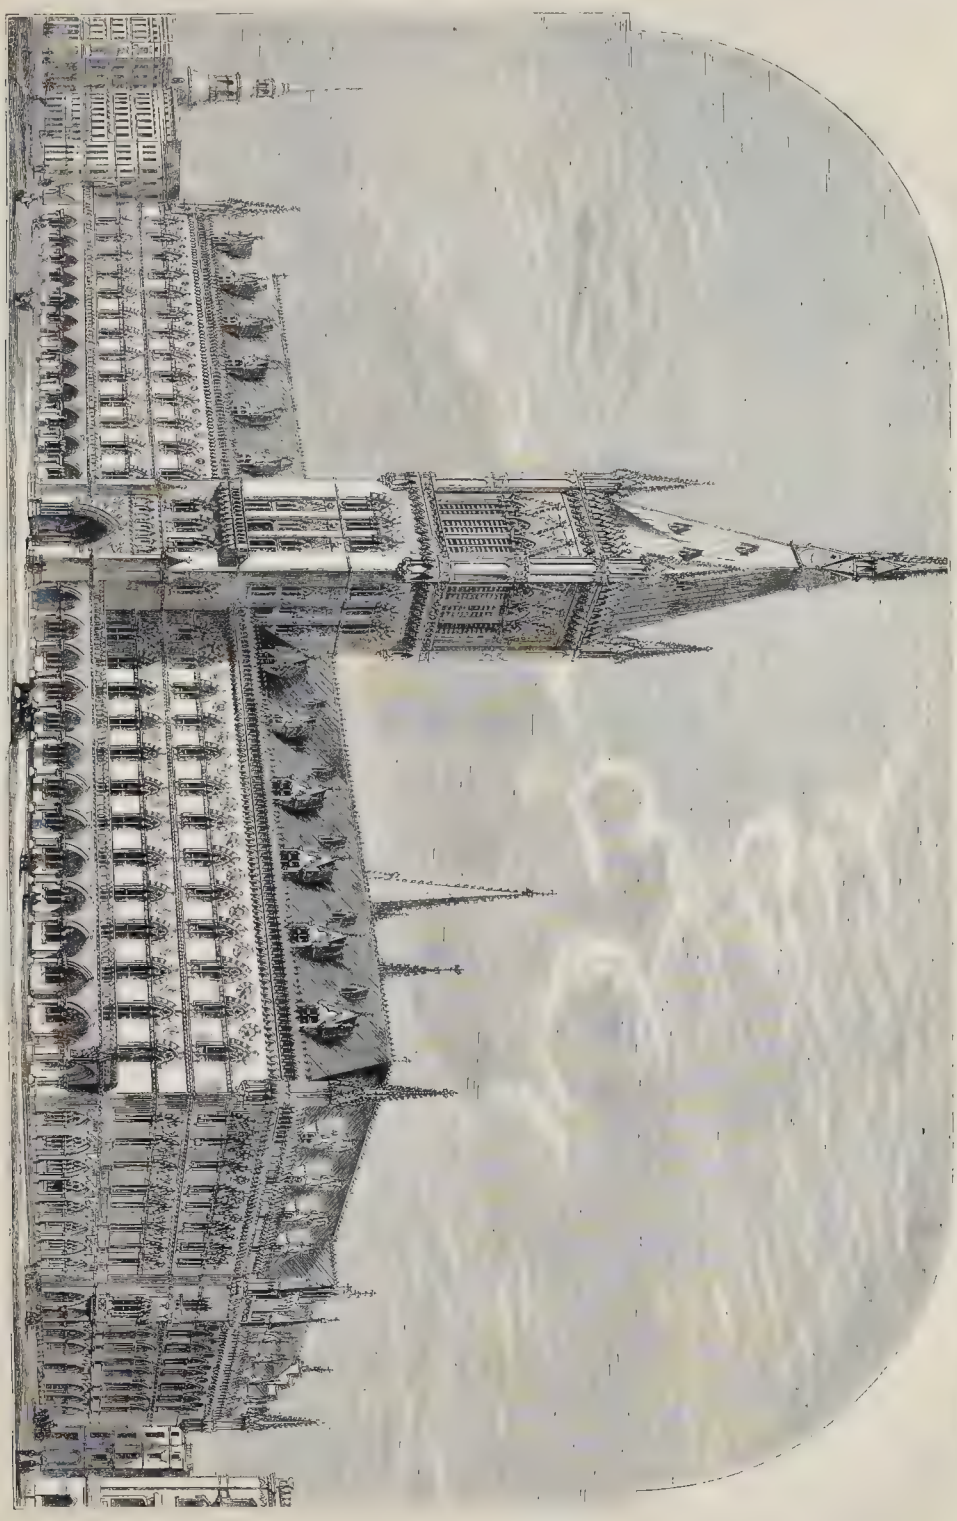
4. Law courts, both civil and criminal.

5. Miscellaneous public offices, such as offices for the regulation of partnerships, bankruptcy courts, the public archives, offices for matters relating to mortgages; those of the board of works; those for the registration of marriages, &c. and several other matters.

The Great Court, or "Gehege," would be used by merchants and others, who have business of a public as well as of a commercial nature; an off-shoot, in fact, of the Exchange, in the midst of the public offices.

THE NEW PRACTICE-RANGE, WOOLWICH.

The military authorities having found the present practice-range inconvenient and dangerous, from the fact of the firing being at nearly right angles to the Thames, it was decided some time since to purchase land to the eastward, and running more parallel to the river, by which means the fire of the artillery would not endanger the shipping, &c. as their range would be entirely within their own premises. The particulars of the contemplated works are briefly these:—

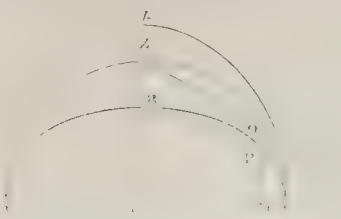


The new range will run in a direct line to the east of the existing artillery road, and will have at the western end a plain building, called the "Lobby," in which will be accommodation for a non-commissioned officer and gunners, also a guard-room, and room for the meeting of any committee that may be in attendance to report on experiments. Near to this are two batteries, one of which is for ten guns, the other for mortars. There are also two wooden batteries, representing the sides of a ship, pierced with port-holes, for the practice of naval gunnery. A martello tower will also be erected in the immediate vicinity of the foregoing. Two magazines and sheltered coverings, called "splinter-proofs," for the protection of the men engaged during the firing, are also provided.

One of the principal features of this large work is the Great "Butt," or mound, against which the practice of the artillery is directed, which is to contain nearly 46,000 cubic yards, and is to be constructed on a foundation of consolidated gravel and fascines. There is a bomb-proof range-room at the back, approached by "ramps."

To maintain the existing drainage of these marshes (a difficult thing to contend with), the trenches or ditches have been filled with old bricks, broken stones, &c. so that while a level surface is secured (which of course is necessary for military evolutions), the percolation of the surface water freely takes place through this rubbish drain.

The whole of the new range is surrounded by a wide boundary ditch, and bridges cross the intermediate fleets that intersect the range. The designs have been prepared by Mr. Stent, the newly-appointed chief clerk of works to the War Department, and will be carried out by Mr. E. Smith, the contractor. The service is under the military supervision of the Royal Engineers' Department.



Value of Property in Pall-mall.—Messrs. Farebrother and Co. recently sold a leasehold estate in Pall-mall East, comprising the premises occupied by the Society of Painters in Water-colours, the entrance adjoining, with private residence, warehouse, and cellars, occupied by a wine merchant, private residence adjoining (No. 6, Pall-mall East), and ground-rents amounting to 58*l.* 5s. 6d. issuing out of chemist's shop and house adjoining, Dorset-place, the whole producing 940*l.* per annum, and held under three leases, expiring in 1919, at ground-rents amounting to 196*l.* 10s. 6d. per annum. It was knocked down at 10,800*l.*

RATHHAUS, OR HOTEL DE VILLE, HAMBURGH.—Mr. G. G. Scott, A.R.A. Architect.

GEOMETRICAL PROPERTIES OF CONIC SECTIONS.

THE ELLIPSE.*

MANY of the properties of the ellipse may be advantageously considered in connection with the circle drawn upon the *major axis*, the centre of the ellipse being that of the circle; this circle is called the "circumscribed circle."

If we draw any line M P Q perpendicular to the major axis, M Q is called an *ordinate* of the circle, and M P an *ordinate* of the ellipse. There is an important connection between the two curves, namely, that *the ellipse is the circle with all its ordinates reduced in one and the same proportion*, which is that of C B to C Z or C A, or, *in the ratio of the minor axis to the major axis*. Hence it follows that M P : M Q = C B : C A. Therefore, if we have given the lengths of the axes, and we draw the circumscribed circle, we may find points on the ellipse, provided we can discover a means of reducing the ordinates in the ratio of the axes. By aid of the sixth book of Euclid this can readily be done.

Produce the axis A *a*, and draw from any point O on the axis produced O Z and O B, and from the point Q, where O Z cuts the circle, let fall a perpendicular on A *a*; then the point P, where Q M meets O B will be a point on the ellipse. So also any number of points may be readily found with the ruler only; for by the sixth book of Euclid, M P : M Q = C B : C Z.

This method of drawing an ellipse will be found more practical by draughtsmen than any other method.

If instead of cutting down the ordinates of the circle in one proportion we lengthen them in the proportion of C Z or C A to C *b*, then we shall have another ellipse, whose *minor axis* is the diameter of the circle, and the curve will be entirely outside the circle. Hence it follows that if we project a circle by means of parallel lines upon a plane oblique to its own plane, we shall always obtain an ellipse, since all the ordinates will be altered in one proportion.

It will be evident from what has been stated that if two circular vaults of equal radius intersect at right angles, they will form an elliptic groin at their intersection. It will also follow that if two cylindrical vaults of equal height, but of different span, of which the lesser is semicircular, intersect at right angles, the vault of wider span must be elliptic, in order that the intersection may be in one plane.

The perspective representation of a circle must always be an ellipse, or of a *portion* of a circle the corresponding *portion* of an ellipse; for the rays of light from a circle to the eye form a conical surface, of which the eye is the vertex and the circle is the base, and any plane intersecting this surface forms an ellipse at the line of intersection. This is an important rule to be remembered by architectural draughtsmen, if they would avoid distorting their arches in perspective views. E. W. T.

* See p. 6, *ante*.

CANDLE-MAKING.—GLYCERINE.

AT the Society of Arts on January 23rd, a paper "On the Manufactures of Price's Patent Candle Company," by Mr. G. F. Wilson, F.R.S. was read, wherein the writer said candles might be divided into four classes. 1. Beeswax, called wax candles. 2. Neutral fat, including spermaceti, tallow, and cocoa-nut candles. 3. Fat acid, known as stearic candles; and, 4. Composite candles, being a mixture of stearic acid and neutral fat. He explained that the reason why a tallow candle requires more than three times the size of wick to give the same amount of light as a stearic candle, was owing to the glycerine being present in the one case, and having been separated in the other; and he demonstrated, experimentally, that glycerine has the effect of reducing the illuminating power of candle material. To get rid of this was the necessity which first called in the aid of science to candle-making. Chevreul, the great chemist, may fairly be called the father of this application of science. His labours, begun in 1811, were collected and published in his "Récherches Chimiques sur les Corps Gras," in 1823. Two years later, he, in conjunction with Gay Lussac, sketched out the idea of the distillation of fatty bodies, and even touched lightly on the introduction of steam into the distillatory apparatus; but he did not succeed practically. Messrs. Motard and Milly, in 1833, first made fat acid or stearic candles commercially successful. Their process was called lime saponification, and was adopted by the English candle-makers, including E. Price and Co. It was, however, expensive; as, to each cwt. of tallow, 14 to 16 lbs. of lime, and 28 to 32 lbs. of sulphuric acid were employed. Subsequently, in 1840, Mr. G. Gwynne proposed the exclusion of the air by means of an air pump, from the apparatus while distillation was going on. Mr. Wilson then described the nature of the patents taken out by the company in 1842-3-4, for distilling cocoa-nut oil and its acids, for the distillation of fats previously acted on by sulphuric acid, or by nitrous gases, and for the use of diluted acid in direct acidification of fats. The author alluded to the important purposes which glycerine would subserve in the arts and medicine. For photographic purposes, the experiments made by Mr. Maskelyne and Mr. Llewellyn were most promising. In the Hospital for Diseases of the Skin, it had been long introduced by Mr. Startin. In Edinburgh it was being prescribed regularly. To show the extent of this company's operations, it may be mentioned that in the month of October last, employment was given to 1,098 men and 1,191 boys and girls, and that of stearic and composite candles, and night-lights, about 707 tons were manufactured, value 79,500*l.* in the month.

ON THE PAST AND PRESENT CONDITION OF THE THAMES.

INSTITUTION OF CIVIL ENGINEERS.

AT a meeting on the 22nd of January, Mr. Robert Stephenson, M.P. president, in the chair, the paper read was "On the Past and Present Condition of the River Thames," by Mr. H. Robinson.

Some of the principal statistical facts connected with the river having been enumerated, the writer said, the numerous shoals now exposed at low tide, the mud-banks covered with putrifying matter and animalculæ, the disgusting state of the water itself, the numerous crazy wood-propped wharfs, and the ricketty barges still serving for steam-boat piers, were referred to, as justifying the opinion, that were it not for the noble bridges spanning it, the Thames, within the limits of the metropolis, would be a disgrace at home and a reproach abroad, and it was remarked that in no town in the world was there a noble river so neglected and deformed.

The various schemes for embanking the shores were then alluded to, and the partial good already effected, was noted. Among the larger designs were those of Sir Christopher Wren, Mr. Martin, Messrs. Walker and Burgess, and others. The removal of the obstruction of Old London-bridge had seriously altered the condition of the river at or near low tide, not only by exposing shoals, which impeded the navigation, and, by leaving a very large surface of mud, giving off exhalations dangerous to health, but also, by so quickening the current, as to enable it to scour away the bottom, near to the foundations of structures built in the channel, and thus seriously endangering several of the bridges and wharfs.

The various causes which had induced the present polluted condition of the Thames were described to be, first, the demand made upon it to serve as a town sewer as well as a land drain. This would, however, have been of little moment, if London had been beyond the influence of the tide, so that the stream could have run always in the same downward direction; but, exposed as the river was to the ebb and flow of the tide, the impurities and sewage, which had been discharged into the ebbing tide, were again brought back by the flood. Nor was this all: in consequence of the low level of a considerable part of the London sewers, the sewage was necessarily stopped back for many hours, and egress could not be afforded, until the water had fallen considerably: the consequence of this was, that it was only during a portion of the ebbing tide, that the sewage was enabled to travel down the river, but it was returning upwards during the whole period of the flood-tide; so that the impurities not only returned to the place whence they started, but were even carried higher up; and it was asserted that some of the putrefying matter, exhaling pestilential odours on the mud-banks in Westminster, was actually discharged from sewers at Bermondsey or Southwark. A short history was then given of the steps taken by the late Commissioners of Sewers to remedy this putrid condition of the river. Mr. Frank Forster had arranged a system of intercepting sewers, by which the sewage of London was intended to be conveyed below Greenwich, and there discharged into the river, at an expense of one million and a quarter sterling. Nothing was, however, done, for want of funds: subsequently Mr. Bazalgette, under the orders of the commissioners, extended and completed the plans, and at an expense of three millions, laid out a system of intercepting sewers. The increased amount of the estimates rendered still more difficult the execution of the works, and nothing was done till the commencement of the past year, when public feeling loudly demanding some amelioration in the condition of the Thames, it was resolved to make at least a commencement; but all progress was stopped, the board disunited, and some of its most efficient members lost to it, by a controversy which arose regarding the size of the sewers. This controversy still continued, and involving, as it did, the question of economy, would probably still divide the new Metropolitan Board. These differences were, however, of the less importance, the writer thought, as there was little chance of such an enormous sum being raised at present for the purpose, particularly as the mere stopping the entrance of any fresh sewage would not cleanse the Thames, under many years, if at all, nor remove the acknowledged principal source of malaria, —the mud banks exposed at low tide. There was, therefore, every reason to fear that the salutary agitation which had been excited on this important subject would again die away, and leave the sewage undiverted and the Thames uncleansed, until a fresh visitation of malignant cholera again roused the public feeling.

The author's proposal to construct a chain of locks across the river, at, or near London-bridge, where the traffic was now divided, already mentioned in our pages, was described.

On the 29th ult. the preceding paper was discussed; and will be again considered on the 5th.

EPISCOPAL PALACE, BISHOP'S WALTHAM.

ABOUT ten miles from Winchester is the little town of Bishop's Waltham, founded, as its name declares, by the Saxons [*i.e.* wood town], unknown, perhaps, to the greater part of your readers, and yet containing many interesting memorials of the past, which would well repay an architectural visit.

The manor having been added to the see of Winchester by William the Conqueror, it gained the prefix of *Bishop's*. We find the first mention of it in the Doomsday Book:—"Ipse episcopus tenet Waltham in dominio. Semper fuit de Episcopatu." Leland speaks of it as a "praty townlet," where "the Bishop of Winchester hath a right ample and goodly manor place, moted about, and a praty brook running hard by."

At a short distance from the town stands the ruin of what was then the "goodly manor" or episcopal palace, founded about the year 1138, by Henry de Blois, brother of King Stephen, and then Bishop of Winchester, who, about the same time, founded and built the castles at Wolversly, Farnham, Merdon, and Taunton. It was here, "at the Bishop of Winchester's, Waltham," that Henry II. convened his nobles, and held a council of the realm; and it was here, at that council, that supplies were granted for carrying on the war in which he was engaged; nay, more, it was here, at that very time, that he made his will previous to joining his brother Crusaders of France. Here, also, our Lion-hearted monarch rested, on a similar occasion, on his way to Portsmouth, where he embarked, never to return.

We see it now inhabited by pigs, and approachable only through dung and filth; parts of it changed into stables and pigsties, the rest uncared for and dilapidated—the hand of time the least of its destroyers. Was it for such an end that William of Wykeham expended so much love and labour upon it? Could he have discovered that future bishops would

have looked upon it as it is, or that the mind's eye alone could trace his hand, in this 19th century of ours, what would have been his thoughts! As its dismantled walls look mournfully down, and memory holds us by the mental button, we almost wish the old days back again. No doubt, ignorance would be pleaded as an excuse, if any were questioned as to its condition. Might not the bishop, who has followed in the wake of so many distinguished by the glory of their lives, be prevailed upon to sacrifice a little of his worldly goods to rescue it,—if not for his own sake, at least for the shadows of the past?

But, still more disgusting than the condition of the palace, and not to be passed over on the plea of ignorance, are the modern improvements (!) to the church. Beautiful in itself, as all Gothic buildings in England are, with any claim to age, it is disfigured by the most monstrous architectural blunders I remember to have seen. A number of Gothic arches have been removed, to make room for a gallery supported on Tuscan columns, with the usual cornice, &c. I know not if an architect were employed: let us hope not.—X.

THREE HOUSES DESTROYED IN THE NEW-ROAD.

On Thursday in last week, while the gale of wind and storm were at their height, three houses were entirely crushed, and their inmates buried in the ruins, by the falling upon them of the immense mass of brickwork comprising the eastern and south-eastern walls of Messrs. Hopkinson's pianoforte manufactory, destroyed by fire on the night of Saturday and morning of Sunday, in the week before last. This manufactory was an extensive building six stories high, situate in the rear of Messrs. Gray and Davidson's, the organ-builders, in the New-road. The houses crushed stood immediately under the wall of the manufactory, to shore up which, it is said in the daily papers, that no steps whatever had been taken since the fire. Labourers being procured, several persons were speedily rescued who had received but slight injuries, whilst seven or eight were got out in an insensible state. The most serious case was that of a young woman, whose jaw was broken, and skull frightfully fractured, and who is since dead. It is remarkable, as well as fortunate, that of the seven taken to the hospital six were sufficiently recovered to leave in the course of the day. Several poor families have lost all their furniture by the occurrence.

At the inquest which has been opened by Mr. Wakley, the coroner, the question was raised whether (with reference to the New Building Act) the Commissioners of Police and other parties had acted rightly in permitting the walls to remain without being shored. It was ultimately decided that an architect should be appointed on the part of the jury to make a survey of the premises and report, and the inquiry was accordingly adjourned.

ON LARGE BELLS—UNISON.

The subject now occupying the attention of the Royal Institute of British Architects is "On the Forms, Methods of Casting, and Ringing of large Bells." This must, to a considerable extent, depend on matters of opinion, for if we suppose a long series of experiments are being investigated, under the direction of the most competent parties, to ascertain whether some totally different instrument for producing the sound of a bell might not be introduced, which would be much lighter, much less costly, and less likely to be cracked, the quality and fitness of such substitute must, after all their researches, principally depend upon the ear. Gentlemen who have successfully studied music all their lives will, of course, think they have a very sensitive ear, and that their acoustic organs are correct enough for all musical or practical purposes: this may be admitted, and also that the sound of bells may be correct enough for all practical purposes. But suppose a large bell be made to ring a certain note, and a mass of metal, of a totally different form from that of the bell, be made intentionally to give precisely the same note, some persons might say they were in perfect unison, while others might entertain a totally different opinion; and it could only be a matter of opinion with either party, for I am not aware of any method of proving which would be right.

It is almost impossible to determine quantities by the eye; but if two squares, or two circles, were represented near each other, and it should be doubted whether they were of the same dimensions, the matter in dispute could be easily proved by measuring them; but there is no mode of proving so accurately by the ear. A very ingenious instrument, called "the syreae," has been invented to determine certain matters connected with sound; by the use of which, the exact number of beats, or vibrations in a given time, may be calculated, and certain musical notes produced. Simple, complete, and correct in itself, as this machine appears to be, its application to determine the corresponding note of a bell, or other musical instrument, must rest entirely on the ear and the opinion of the hearer, whether he considers the two sounds to be precisely the same, and in perfect unison; that is, do they beat a like number of vibrations in a given time, which is a question more easily asked than answered to a certainty. The number of beats per second of the "syrene" may be calculated correctly, but who can count the vibrations of a bell or a harp-string? Such nicety of observation must rest with the expression, "I think the two sounds are alike, but I am not certain." No doubt any one with a highly-cultivated musical talent will do much towards determining such a difficult question; but up to the present time, practical proof appears to be involved in impenetrable obscurity. C. H. Smith.

GAS.

In consequence of the threatened formation of a Gas Consumers' Company at Willenhall, the shareholders of the existing company have authorized their directors, at the request of a deputation of gas consumers, to give such reduction in price as may seem fit. The directors, however, seem to entertain the idea that the limited consumption renders the granting of such a reduction as that desired unadvisable.——The lessee of the *Lincolnshire Chronicle*, who is a shareholder in the Lincoln Gas Company to a small extent, endeavours, in last week's *Chronicle*, to show the undesirableness of forming the threatened gas consumers' company, and holds out a prospect of a reduction in price from 5s. to 4s. or perhaps 3s. when the enlargement of their works is paid for.——It is proposed that the highest charge by the Gainsborough company, for gas supplied by meter, shall not exceed the rate of 5s. 6d. per 1,000 cubic feet, unless the cost of the best Silkstone coals at the Gainsborough Gasworks shall exceed 15s. per ton, in which case the price for gas shall be increased 6d. per 1,000 feet, and shall be further increased 6d. for every additional 5s. cost per ton of the said coals, or for any fractional part thereof.——Notice has been given of an advance from 5s. by the Southampton company, on the ground of a rise in the price of coals, the advance to take place on 1st January. An agitation is going on here, too, in favour of a consumers' company.——Mr. G. Flintoff gave lately a lecture at Hereford, on the gas question. In course of his lecture he stated that from a ton of coal 10,000 feet of gas are made, and after that has been extracted, 13 cwt. of coke remain, besides 10 gallons of tar, and 10 gallons of ammoniacal liquor. In Hereford, where gas was at 6s. he would estimate the ton of coal to cost 16s.; the 13 cwt. of coke would be worth 14s.; the 10 gallons of tar would sell for 1s. 3d.; while the ammoniacal liquor would run to waste: this would reduce the actual cost of raw material to 9d. for 10,000 feet of gas, being not quite 1d. per 1,000! The cost of coals had little to do with the cost of gas, because wherever coal is dear, an increased proportionate price is obtained for the coke. In London the cost of raw material for 10,000 feet of gas was 4½d.; in Burnley, 3d.; and in Liverpool, 5½d. In Boston, a place very similar to Hereford, the coal was 18s. per ton, and 16s. 6d. was got back for coke, tar, &c.; which reduced the cost of material to 2d. per 1,000 feet. Taking, then, these facts as they stood, there was no reason why Hereford should not have gas at 3s. per 1,000, because the cost of labour was in all places nearly the same. In some places the system of having gasworks under the management of corporations had been most successful. In Manchester there was a profit of 50,000*l.* per annum from this source, which was expended in paving the streets and improving the town; and they had also extended their light to the out-districts, finding that gas-lamps very effectively do the work of policemen.—A discussion followed the lecture, and a vote of thanks was passed to Mr. Flintoff.

The Colchester Encampment.—The new barracks in the Ordnance-field, Colchester, are now almost completed. A wooden church, to accommodate 800 to 1,000 men, is being erected in the old military burial-ground, near the camp. A building has been raised for a library. The camp is to be lighted with about forty oil-lamps till gas-lamps are got ready. Several fire-engines have been temporarily placed in the engine-house, till others of a more powerful description are supplied. The camp will partly be enclosed with a wall 12 feet high, and by a fence of oak paling of same height. The Government Inspector has examined the works, and expressed satisfaction with the execution of the contract by Messrs. Lucas, Brothers. It is thought probable, from the size of the camp, that more hospital huts will be required.

FAILURE OF BUILDINGS.

Four newly-erected houses have recently fallen in Paddington, in consequence, it is stated, of the flooding of the basement by the escape of water laid on to an adjoining tank.

Other falls have lately occurred in the suburbs of the metropolis; and we would earnestly reiterate our caution often before given at this period of the year. Unless better *mortar* be used, and more care taken in quarters to which we could point, we shall have some serious accidents to record before long.

BUILDING PATENTS.

The following are selected from lists in the *Mechanics' Magazine*, and other sources. All except the last are specifications of patents recently filed:—

Lee, Henry, jun. of Lambeth, contractor, and John Gilbert, of Hackney-road, engineer. "Certain machinery for mixing the substances used in the formation of concrete and other like substances." Patent dated May 2, 1855 (No. 986). This invention consists in mounting a cylinder or case upon a shaft, and in providing such cylinder or case with an aperture and cover which forms both the feed and exit passages for the materials. Rotary motion is communicated to the cylinder, and after having been continued a sufficient time, the cylinder is stopped with the aperture downwards, the cover is removed, and the concrete runs out.

Hamilton, John, jun. of James-street, Liverpool. "Improvements in the construction of iron girders." Patent dated May 4, 1855 (No. 999). In this invention a series of corrugated sheets of iron are used in constructing the upper part of a girder, fastened together, and kept at a distance apart, and parallel to each other, by transverse partitions of wood or iron, with undulations to correspond with and fit the corrugations of the sheets.

Newton, A. V. of Chancery-lane. "Improved machinery for manufacturing bolts," &c. (a communication). Patent dated April 20, 1855 (No. 888). Iron of a size corresponding to that of the head of the finished bolt, or slightly smaller, is heated and submitted to the action of certain dies, after which it is carried to other dies, and the shank is drawn down. The form of the shank is then perfected by a cylindrical die, and the bolt is severed from the bar by other dies. The head is then perfected by a heading die.

Bowron, James, of Tyne and Tees Glass-works, South Shields. "An improvement in the manufacture of glass tiles." Patent dated May 8, 1855 (No. 1,031). *Claim.*—The manufacture of glass tiles by pressing them from fluid glass, instead of first making the glass into sheets and then shaping it.

Muller, Emile, civil engineer, Joseph Gilardoni, and Xavier Gilardoni, of Rue de Provence, Paris. "A grooving and clamping hooked tile, by means of which the entire covering of a roof is tied together. A machine, for the fabrication of such tile, by which it is continuously delivered from the mould through a peculiar system of delivery, applicable to any matter that may be moulded, and a continuous succession of furnaces for its burning. Patent dated April 27, 1855 (No. 952). The inventors describe certain improved tiles, so shaped that a recess in one falls over a projection on the other, the whole being afterwards clamped together by means of metallic wires, &c.

Sanders, F. G. of the Patent Architectural Pottery, Poole, Dorset. "Improvements in brick, pipe, and tile machines." Patent dated May 12, 1855 (No. 1,069). *Claims.*—1. The construction of brick, pipe, and tile machines, wherein screws are fitted at either end, for the purpose of forcing the plastic materials in opposite directions. 2. The application of knives, either to double or single shafts, for mixing and forcing clay through the die or lateral openings, or for pugging.

The following is from a list of provisional specifications not proceeded with:—

Wright, L. W. of Birmingham, engineer. "Certain improvements in locks." Application dated May 1, 1855 (No. 978). This invention consisted in constructing a form of lock in which the key had to pass one or a series of slotted plates or wards, at every half-turn. A screw-pin, being an exact counterpart of the screw-key, is fitted to the lock-plate, and receives the key, on the lower end of which may be a bit to catch one or more tumblers. A cam piece is attached to the stem of the screw-pin at its lower end, and under the bolt, and when in a state of rest, is in a line almost parallel with and against a portion of the bolt. The tumblers are applied to side of bolt, working by means of a spring in a slot or notch, which tumblers are raised by the key in locking only, and not in unlocking: the screw-key both in locking and unlocking turns in same direction.

Notices of Books.

Treatise on Conic Sections. By the Rev. G. SALMON, M.A. Third edition. Longman and Co. 1855.

THERE is scarcely any scientific subject upon which so many treatises have been written as the conic sections. Since the time of Archimedes they have formed subjects for investigation to every eminent mathematician, each finding some new beauty or peculiarity in these remarkable curves. But it is from the time of Des Cartes (A.D. 1637) that we date the most important development of the properties of conic sections: it was he who by first bringing the powerful aid of algebra to bear upon geometry, laid the foundation of our extended knowledge and application of these curves. The method which he introduced was the laying down the position of any point on a curve with respect to a fixed point called the origin. This is done by drawing two straight lines, intersecting at right angles in the origin, and measuring the distance of the point from each line. To take a familiar illustration of this, let us suppose a small object laid on the floor of a room, and we require to know exactly its position with respect to one corner of the room, so as to be able to place it at the same spot again: if we measure its distance from the two walls which meet at the given corner, this will enable us to restore it to its place.

This is the principle introduced by Des Cartes in applying algebra to geometry; and the two measurements above described are called the *co-ordinates* of the point. His method is now universally adopted in all works on the higher branches of mathematics or natural philosophy, and according to it a curve is said to be given when its *equation* is given, *i.e.* the relation which exists between its co-ordinates, which are generally called x and y. In algebra, an equation is said to be of the *first degree* if x or y enter it with no higher powers than the first, and of the *second degree* if x^2 or y^2 enter into it, but no higher powers. Thus, the conic sections are called curves of the *second degree*, since their general equation is,—

$$Ax^2 + Bxy + Cy^2 + Dx + Ey + F = 0;$$

and this equation stands for ellipse, parabola, hyperbola, or straight line, according to the values given to the co-efficients, A, B, &c. Hence this branch of mathematics is now called "Algebraic Geometry;" but the term belongs to every application of algebra to geometry, which now extends far beyond the limits of the conics.

The work before us is one which we should have great confidence in placing in the hands of students desirous of an intimate acquaintance with the higher mathematics, since it will introduce them to all the most approved modern methods of treating the subject, and also will carry them far beyond what most works of the kind will do; as, for example, the "harmonic properties" of conics, and the interesting theorems connected therewith, of which a full account is given, but which have hitherto been generally avoided or merely glanced at in elementary treatises. There is one point in the arrangement which may cause difficulty to the elementary student, viz. discussing the ellipse and hyperbola together in the same chapter as "central equations," which has the advantage of showing their intimate connection, but is likely to prove very embarrassing to the student, for whom it is necessary to treat the peculiarities of each curve separately. To make this treatise complete, there should be a separate chapter on each of these curves previously to that above mentioned.

The fact of this work having arrived at its third edition in five years, proves that it is one for which there was a want, and that it has filled up the lacuna. The edition before us contains much new matter in the way of examples and applications of the various theorems.

VARIORUM.

"Health and Comfort; their Attainment and Preservation," by George Wyld, M.D. is a little threepenny tract intended for distribution among the working classes, for which purpose it is to be sold (in quantities, and at a reduced rate) at Exeter Hall, by the Society for Improving the Condition of the Working Classes, as well as by the trade publishers, Shaw, of Paternoster-row, and others. In his brief introductory remarks, the author says, "At our hospitals and dispensaries in London there are probably not fewer than 500,000 prescriptions written in a year for ailments, a very large proportion of which might have been avoided by attention to the most common rules of health. There is, however, at our hospitals, no opportunity for explaining fully to the patients these very simple though much neglected rules; and it is with the hope of in some small degree supplying this want that I now publish this little work. We have hundreds of thousands of religious tracts annually distributed among the working classes; but though sin, disease, and misery, ever go hand in hand, we have few tracts bearing upon the moral and physical condition of the people. I earnestly desire to supply in some degree this crying want." The limits being very circumscribed in a tract for extensive distribution, likely to be at all saleable, the various subjects treated of are unavoidably handled in a curt and axiomatic way, but with those multitudes amongst the working classes who require such tracts, this is precisely the way best adapted to give force and effect to sanitary and other rules of moral and physical conduct. Such tracts are much needed, and might very advantageously be combined with, and distributed amongst, religious tracts themselves, harmonizing as they mutually do in the promotion of the moral and general elevation of the lower orders.

Miscellanea.

THE PAVILION AT BRIGHTON.—A paper on this once "Royal property" has been printed by order of the Pavilion Committee,—namely, the report of a sub-committee, "for appropriation of the Pavilion Property." It is dated 14th January, 1856, and occupies nine closely-printed pages of foolscap. From an abstract of it in the *Brighton Herald*, it appears that the scheme is a colossal one, which will require a large sum to carry it out; but the purpose is to make the Pavilion a paying concern, while devoting it to public purposes, and to recreation and amusement. The palace proper is proposed to be divided and mainly rented for public or social purposes, weekly or nightly; the north property to be converted into a winter garden (to occupy the great dome), a museum, picture gallery, public library, and riding-house; and the grounds and precincts to be arranged and altered in detail, as suggested.

THE WESTMINSTER IMPROVEMENT COMMISSION.—Some extraordinary revelations have come forth with respect to this corporate body, which was created by Act of Parliament ten years ago for the purpose of building Victoria-street, Westminster. The body had almost the character of a Government corporation, for it was endowed with an unrestricted power of borrowing money, coupled with grants out of the London Bridge Approaches Fund, and the improved rates of the parishes in Westminster. The accounts were to be examined by the Commissioners of Woods and Forests. The corporation at length became involved: bonds were issued to builders, who advertised them for sale upon the lowest terms; and in January, 1855, the commission became totally insolvent. A meeting of the bondholders was called: a committee of investigation was appointed; and a petition has been presented to the House of Lords, and a bill of complaint filed in Chancery. It is asserted that the commissioners have incurred a deficiency of 100,082*l*. They have since, as far as can be ascertained, put forth bonds to the amount of 1,030,570*l*. of which they say 89,700*l*. have been cancelled, leaving 977,050*l*. as the amount in circulation on the 31st of December, 1854, when they stopped payment. Besides the means thus raised, the commissioners are alleged to have mortgaged the freehold property of the undertaking for 271,500*l*. The present value is only 167,200*l*.; but it is thought that about 140,000*l*. worth of the mortgages would be ignored by the Court of Equity, and it is calculated that the value of the street will be greater when it is completed. The commissioners are also accused of issuing bonds to a large amount without proper security; of issuing 58,000*l*. worth within a few days of their insolvency; of making an undue charge for interest; and of executing preferential mortgages almost at the very moment of the stoppage. They are now selling bonds at the rate of about eight per cent.—a proceeding which will ruin many of the present holders; but it does not seem that the commissioners are amenable to any punishment.—*Leader.*

*** Very long ago we drew attention to the peculiar proceedings of these commissioners.

LONDON AND MIDDLESEX ARCHÆOLOGICAL SOCIETY.—The first general meeting of this society was held on Monday evening last, under the presidency of Lord Londesborough, in the appropriate locality, old Crosby-hall, Bishopsgate-street. The papers read were:—"A general Introduction to the Antiquities of London and Middlesex, and to the Objects of the Society," by the Rev. T. Hugo; "Notes on Roman London," by Mr. Charles Roach Smith, in which the writer suggested many new features of interest; among the most important was the conjecture that a Roman amphitheatre had existed on the site of Seacoal-lane, Farringdon-street; "Facts and Documents connected with the Church of St. Helen's, Bishopsgate," by Mr. Thomas Lott; "The History and Architectural Remains of Crosby-hall," by the Rev. Thomas Hugo; and on a "Monumental Brass in Enfield Church," by the Rev. C. Boutell.

SHIPBUILDERS' STRIKES.—The dockyard shipwrights at Portsmouth have struck work for an increased rate of pay. The Admiral Superintendent was to communicate with the Admiralty on the subject. The cause of dissatisfaction is the amount of money they are enabled to earn—6s. a day on the average, working at task-work two or three hours overtime daily. This they contrast with the 7s., 8s. or more, earning daily by men in the private yards. On the other hand, it is urged that the engagement in the dockyard is a permanent one, while the men in private yards are liable to be suddenly thrown out of work. The superannuation enjoyed by the shipwrights in the royal yards is also urged as another advantage enjoyed by them. The Dumbarton shipbuilders' hands are still on strike, and there is little prospect of a good understanding being re-established between the masters and men. Many of the latter are leaving the town, and a large number of boilermakers, brought from Liverpool, refused to work so soon as they arrived and understood that they were wanted to replace others on strike. They therefore returned in a body to Liverpool, their passage being paid by the unionists. On Saturday before last fifty-one men and boys employed on engines in one yard had to be paid off, in consequence of the contract for certain vessels being given up. A further number were to be discharged in another week.

WALKING OFF WITH A WALL.—On Wednesday, the River (Tyne) Commissioners resolved to put in force their Act of Parliament against Thomas Thackeray, a wherryman, charged with having carried off a portion of the river wall opposite the Muck House; and it was stated that an iron manufacturer, in want of chalk, had swept away some 20 yards of wall, his excuse being, that owing to the detention of vessels, he was in such a predicament, that he must either take the chalk, or his furnaces must blow up! From the temper evinced by the commissioners, we venture to say that any future offender who may be caught will "go *Ad Muram*" with a vengeance!—*Gateshead Observer.*

DESTRUCTION OF A CHURCH BY FIRE.—St. Fagan's Church, Aberdale, has been entirely destroyed by fire, according to a Carmarthen paper. It was erected by the Hon. Mr. Clive, the owner of considerable estates in the neighbourhood, and was only opened in 1854. It afforded accommodation for about 700 persons. The "church flue" of course was the source of the mischief. It appears that a woman engaged in cleaning the church had made a fire in the stove, for the purpose of heating some water. She used for the fire a quantity of holly, with which the church had been decorated at Christmas. It is supposed that this fuel being very dry sent a flame through the piping beneath the floor, thence through the flue, which was cut off short at the roof, probably because such an appendage was considered unsightly. This roof was composed of an inch deal in the interior; there was a layer of felt between the wood and the slates. This felt probably became first ignited. The amount of damage done is estimated at upwards of 2,000*l*. The edifice, it seems, is not insured. The entire wood-work is consumed, the walls remain standing; but it is expected they will have to be rebuilt: the bell fell to the ground, but fortunately is uninjured.

EDUCATIONAL SOIREE AT GORTON LOCOMOTIVE WORKS.—The opening of a literary and educational institution, in connection with the extensive locomotive works of the Manchester, Sheffield, and Lincolnshire Railway Company, at Gorton, was celebrated by a *soirée* at that place, on Saturday evening before last. A large building, ordinarily devoted to the manufacture of waggon-sheets, was for this occasion transformed into a gaily-decorated hall. A very large number of the workmen employed by the company were present, with their wives and families, the latter being represented by individuals of all ages, infants in arms not excepted. Altogether about 700 persons were assembled. Mr. Edward Watkin, the general manager, presided.

State of the Roads at Kennington. — Will you kindly oblige me, in common with the inhabitants generally of the locality, by calling public attention to the disgraceful state of the footpaths of the Kennington and Clapham roads. Commencing this side of Kennington-park, the footways remain unpaved, notwithstanding that the majority of the houses have stood nearly half a century. The consequence is, that after a shower of rain, the footpaths become ancle deep in mud. Why should this be? Why should all the small bye-streets be paved as soon as the houses are erected, whilst the main roads, having of course the greater traffic (and, therefore, of course the more requiring paving), are neglected. The authorities are sharp enough after the paving rates, and it would be interesting to know what becomes of the large amount they must receive. The revenue derived from Kennington-gate, too, must be a long way from a trifling sum. Is it not, sir, a disgrace to the nineteenth century, that so little attention is given to cleanliness in the streets of London, and its suburbs?—J. J.

Oxford Architectural Society.—A course of Elementary Lectures on Architecture is being delivered at the Society's-room, Holywell, during the present term, in the following order: — January 30, Hon. H. C. Forbes, M.A. Oriel College; February 7, Rev. E. Miller, M.A. New College; February 13, Mr. Parker; February 20, Mr. James Parker; February 27, Rev. H. B. Walton, Merton College; March 5, Mr. Hingston, B.A. Exeter College.

New English Church at Cannes (South of France).—This agreeable winter resort, on the shores of the Mediterranean, now enjoys the advantage of a Church of England. The new edifice lately erected at Cannes, is in the Gothic style of architecture, from a design by Mr. Thomas Smith, of Hertford. Through Lord Brougham, and our Ambassador in Paris, permission has been accorded by the French Government, to open and use it for service in the English language, in accordance with the forms of the Established Church of England. The dedication took place on 27th December last, and was conducted by Bishop Spencer, late of Madras.

Plymouth School of Art.—This institution was opened on Monday before last, and, according to the local *Times*, bids fair to be a successful undertaking. The mechanics of Plymouth, it appears, have availed themselves of this opportunity for improvement. Mr. Offord, the teacher, delivered a suitable address at the opening, and during the evening fifty-one tickets of admission were taken up, and a special class of twenty members formed. A ladies' and a gentlemen's class have also been commenced.

"Halting Places."—It is presumed this matter will speedily come before the public in a practical shape. In many prominent and desirable places, the difficulty may be got over by excavating a space of about 8 feet square and 6 deep, partially covered over, with step on two sides, keeping clear of the gas and water pipes.—L.

Metropolitan Board of Works.—At a meeting of this board, held on the 25th ult. the election of engineer was proceeded with, when Mr. Bazalgette, Mr. Rawlinson, and Mr. Henry were called upon to urge their respective claims to the office, after which Mr. Bazalgette was elected. We have received several letters on the subject, mostly personal. Afterwards the board proceeded to the choice of an accountant, when Mr. Hatton was elected by a large majority. As to the Superintending Architect, our advertising columns will show the required qualifications and duties. The salary is not large enough.

New Digging Machine. — The Rev. H. G. Bailey, of Swindon, has patented a digging machine, to be worked either by steam or horse power. A row of spades or forks, working to a much greater depth than by manual labour, produces, according to the *Staffordshire Advertiser*, a perfect inversion of the soil in a manner hitherto attained only by hand.

Coating Iron.—Messrs. Morewood and Rogers have invented a method of coating sheets of wrought-iron. The sheets are to be first cleansed by dilute acid in the ordinary manner, then covered over with some one or more of the following substances in a solved or melted state, viz., turpentine, resins, lac, gums, oil, grease, gelatinous or bituminous matter. Sheets so prepared will be ready to be soldered without being first coated with tin.——In the electro-coating of iron, Mr. F. Puls has patented the regulation or modulating of the intensity or quantity of the electric current from the battery proportionately to the surfaces of the iron to be coated, thus causing the zinc to be deposited upon the iron in the smallest possible particles or atoms, thereby securing a perfect adhesion of the zinc to the iron.—2. The employment of sulphate or hydrochlorate of zinc, or double or treble salts of same, with potash, soda, and ammonia, for the purpose described.—3. The rinsing of the exhausted fluid from the bath in the battery, and that from the battery in the bath.

West's Safety Coal-hole Plate. — Having reference to the numerous accidents caused by the slipperiness of the ordinary iron coal-plates, a substitute has been devised by Mr. West. It consists of a flat thin iron cup, so to speak, 12 inches in diameter, the rim about 1½ inch deep, and 1-10th of an inch thick. Into this a piece of stone corresponding with that of the pavement is cemented. A simple iron rim, with a lip at the bottom to hold a piece of hard, stone or slate, might even answer the purpose.

Proposed College of Mining Engineers, at Newcastle-upon-Tyne. — For some time the members of the Mining Institute of this town have had in contemplation the establishment of a Mining College, upon a scale commensurate with its importance. Recently the committee of management have issued prospectuses concerning the college, in which they solicit subscriptions, and the Duke of Northumberland has promised, that should the committee raise 15,000*l.* he will contribute 5,000*l.* towards that sum; and should they raise 30,000*l.* he will subscribe 10,000*l.* It is also expected that the Marchioness of Londonderry, Earl of Durham, Lord Ravensworth, and others interested in the coal produce of the district generally, will contribute largely to the project. The manufacturing interests are to be combined with the mining in the projected institution.

Conversazione of Norwich School of Art.—During the last year the number of students in this school has steadily increased, and to the extent of one-third more than in former years in the special and intermediate classes. The scholarships given by Sir S. Bignold, M.P., E. Warner, esq. M.P., and J. H. Gurney, esq. M.P., according to the *Norfolk Chronicle*, have elicited a remarkable degree of emulation among the students. These scholarships are privileges which only this and one or two other schools in the country possess. On Thursday evening in last week, the rooms in St. Andrew's-street were filled by a fashionable assembly. The committee of the school held a *conversazione*, with a view of promoting a taste for art among the citizens. This meeting was not intended for business but for pleasure, and the intention was fully realised. The class-rooms and gallery were filled with works of art, numbers of photographs, and engravings, sent by the Board of Trade Department of Science and Art, besides a selection of designs for manufactured articles, and illustrated works. For about an hour the company inspected the works of art in the different rooms, and then, by request, reassembled in the large room, to hear several addresses delivered.

Gas Stoves.—Gas stoves require to be securely fixed. A short time since I was called upon to assess a fire loss which occurred in the manager's room of a gas-works, and was caused by the gas-stove used therein, and but for a timely discovery would have occasioned a very serious loss. The stove was supplied with gas by means of a pewter pipe, and there being no provision for fixing the stove to the floor, the smallest motion given to the stove would cause a rupture of the supply pipe,—and to this cause I attributed the accident. The stove was manufactured by an extensive manufacturer of the article, who has made no provision for fixing the stoves, although when I called at the establishment and pointed out the apparent cause of the accident, they admitted the necessity of it. There is some danger too, I apprehend in the unsoldering of the joints.—A. B.

Organs: the Effect of Vibration. — As you have lately given space in the *Builder*, to some interesting remarks on the king of musical instruments, the organ, perhaps I may be allowed, in continuation of the subject, to ask for information, through the medium of your valuable journal, on a question of some importance to architects. Supposing the actual weight of an organ to be 10 or 12 tons, what extra strength of floor, or other supporting power, should be provided to guard against the effect of vibration? An experiment (not very carefully made, it is true), gave me a curious and apparently contradictory result with regard to stopped and open wood pipes. A C C C (stopped) Bourdon pipe, 8 feet long, gave more vibration to a piece of wood, 5 feet in length, fixed at one end, in the ratio of 3 to 2, than did an open pipe 16 feet long, giving the same note. Wood open pipes also seem to give more vibration to surrounding objects than metal pipes of the same dimensions. Is this correct?—T. W. H.

"New Black Paint."—Mr. M. Staite, says a contemporary, crushes carbon by means of hammers and rollers, and grinds it by means of stones, and then takes the dust and passes it through sieves (of about 3,000 holes to an inch), or subjects it to successive washings in large tubs. When a sufficiently fine dust or sediment is procured, he mixes it with linseed oil, in the proportion of about six gallons to a ton, and re-grinds it to a fine soluble paste." Such a paint may do very well for iron or other incombustible surfaces, but its liability to give rise to spontaneous combustion suggests the necessity of care in its use.

Building Operations in Liverpool. — The annual report of Mr. Rishton, the building surveyor, was read before the Health Committee of the Corporation recently. The principal facts contained in it are as follow:—Dwelling-houses and warehouses erected, or in course of erection, within the municipal borough during 1855,—under 12*l.* per annum, 63; from 12*l.* to 25*l.* 1,144; from 25*l.* to 35*l.* 99; from 35*l.* upwards, 49: total, 1,355. Warehouses, 9. Comparative statement of the number of dwelling-houses erected since 1838,—1838, 1,052; 1839, 997; 1840, 1,576; 1841, 1,761; 1842, 2,027; 1843, 1,390; 1844, 2,450; 1845, 3,728; 1846, 3,460; 1847, 1,220; 1848, 656; 1849, 446; 1850, 420; 1851, 837; 1852, 1,136; 1853, 924; 1854, 829; 1855, 1355: total, 26,264. Buildings (not dwelling-houses) erected, alterations made, and dangerous dwellings taken down or secured, during 1855,—buildings: such as stables, smithies, &c. 77; such as manufactories, offices, &c. 73. Alterations and additions: of extensive character, 60; of inferior character, 303. Dangerous buildings taken down or secured, 97. The dwelling-house erections last year have been in excess of those in 1854. In 1854 there were only 829 dwelling-houses erected, whereas, last year, as will be seen, there have been 1,355 erected. Of this number 63 will let at about 10*l.* or 12*l.* per annum each; 1,000 at about 15*l.* or 16*l.*; the remainder at much higher rents.

A Crooked Railroad.— The *Potsville Journal* says that one dark night last week, an engineer of a lengthy freight train on the Catawissa Railroad, to his horror, perceived a light rapidly approaching, as he thought, upon the track. He sounded the alarm, and the brakes were at once applied, when he discovered that it was the signal upon the rear car of his own train, which, from the great curvature of the road, shone full upon him! It is related of a railroad somewhere in Virginia, that the engineers give themselves no uneasiness when they run off the track, confident that they will come upon it again before they go a dozen rods. Perhaps this is the same road.

Monument to Alfieri.—The committee, formed many years ago at Asti, for the purpose of gathering subscriptions towards a monument to Alfieri, having now collected a sufficient sum, have issued a notification to all those sculptors who had sent models at different periods, informing them that they alone will be admitted to the competition for the erection of the monument, on condition of their sending to the committee, within three months, a model of the height of 1½ metre, the names of the competitors to be concealed in the usual manner. The size of the statue of Alfieri, when executed, is to be 4.30 metres.—*Galignani.*

Arches under Public Ways.—It may not be amiss to remind builders and others interested, that in putting in these works without the proper notice, they incur a penalty of 20*l.* with a probability of the works being abated. It is quite time they were made the subject of regulation as to the thickness of their crowns, &c. &c.: see sec. 25 of the Metropolitan Building Act. As regards the constant removal of the crowns of ovens, as named in your paper, this is rendered necessary only by their faulty construction.—Nemo.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Steam Power and Docks 30 and 16-ton Cranes. Sawpits for converting Timber, &c. Freights paid on delivery. Apply to G. NOKES and Co. as above.

A SUBSTITUTE FOR PAINT, AND AT HALF THE COST.

STEPHENS' DYES or STAINS for WOOD. The following extract from a letter the Proprietor has obtained leave to make public:—"Northgate, Colchester, Feb. 5, 1855. Sir,—I have just finished a new church with your Oak Stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.—I am, sir, your obedient servant,

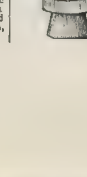
"SAMUEL GRIMES, Builder.

"To Mr Henry Stephens, 54, Stamford street, London."

Samples and prospectuses free to any part of the kingdom.

SMOKY CHIMNEYS CURED EFFECUALLY for TEN SHILLINGS, by SUTERS'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.



NEW PATENT SMOKE PREVENTER. The Rev. James Burrow, of Ashford Parsonage, Sakewell, has appointed WILLIAMS, BURTON, & CO. Soho-square, sole Metropolitan Agent for the sale of his SMOKE PREVENTERS. They have been used under many varied circumstances with great and uniform success. They are very simple, and not liable to get out of order. Price 10s. 6d. 12s. 6d. and 16s. each.

The alterations and additions to these extensive premises (already by far the largest in Europe), which occupied the whole of last year, are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, and Turnery, Lamps and Gaseliers, Iron and Brass Bedsteads and Bedding), so arranged in Sixteen Large Show Rooms as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

Illustrated Catalogues sent (per post) free.

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established 1820

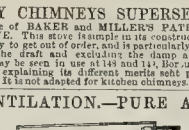
By Her Majesty's Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down Draft, Smoky Chimneys, and for Public and Private Buildings requiring a constant change of air.

Also,

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.

Also,



VENTILATING ROOFLIGHTS, for Slate or Tile Roofing, without Paint or Putty.

Prospectuses sent on application.

London Depôt—ESNOUF and MANGER, 141, Minories, City.

SMOKY CHIMNEYS SUPERSEDED by the use of BAKER and MILLER'S PATENT DEFIANCE STOVE. This stove is simple in its construction, having no machinery to get out of order, and is particularly adapted for sharpening the draft and excluding the damp air from the chimney.—May be seen in use at 148 and 149, Borough, London. Prospectuses explaining its different merits sent post free on applications. It is not adapted for kitchen chimneys.

VENTILATION.—PURE AIR.

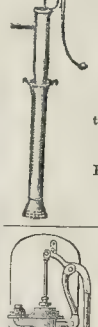
Sheringham's Ventilator for the admission of pure air through an EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt, by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

ROYAL POLYTECHNIC.—INEXHAUSTIBLE NOVELTIES! Lecture on the Poison STRYCHNINE, by J. H. Pepper, esq. daily, at Four and Nine. The poison and the tests used for its detection exhibited in the oxy-hydrogen microscope.—The Second Part of the Voyages of Sindbad the Sailor, with new and beautiful Dissolving Pictures designed and painted by H. G. Hine esq. and Description, with Songs, by Lenox Horne, esq.—Brilliant Popular Lectures, on Flame, Fire, and Combustion, by J. H. Pepper, esq.; and on the Great Steam Electrical Machine, by Mr. Wylde.—3,000 Models and Works of Art on view.—Admission, One Shilling. Children and Schools, half-price.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, road, bricklayers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.



PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 19-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 28s. per doz. painted. Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels,

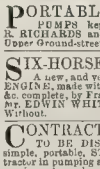
Plain or Sliding Telescope Suction,

ON HIRE.

SINGLE AND DOUBLE PUMPS, all sizes, to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.



TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive levers and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 33 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS, 8, Crescent, Jewin-street, London, Manufacturers and Patentees.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

SIX-HORSE POWER STEAM-ENGINE. A new, and very superior high-pressure 6-horse power table ENGINE, made with all the latest improvements, and fly-wheel, &c. complete, by Frost, TO BE SOLD a bargain.—May be seen at Mr. EDWIN WHITE'S Auction Rooms, 177, Bishopsgate street Without.

CONTRACTORS' PUMPING-ENGINES. TO BE DISPOSED OF second-hand THREE strong, simple, portable, STEAM-ENGINES, recently used by a contractor in pumping and sawing, &c.; have been put into perfect repair, and may be purchased separately, with or without one or two sets of pumps and driving gear; also circular-saw tables, &c.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road, where the above may be seen.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL,—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and may be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON,
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being procured in its natural unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. RIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater.

BATH CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

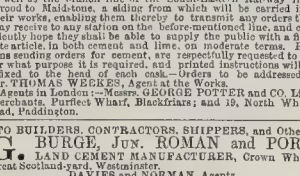
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maid-tone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.



Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, Jun. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'s BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SEconds, PAVIORS', STOCKS, and other BRICKS.

TO LIME, CEMENT, or STONE MERCHANTS.—PART of a WHARF TO BE LET, at Queen-street, Hammersmith, close to the Suspension-bridge, with frontage to the Thames.—For particulars apply on the Premises, Chancellor's Wharf, Queen-street, Hammersmith.

LIME.—Gray Stone, 9s. 6d.; Chalk, 8s. per yard; at THOMAS J. COLE'S Depôt, Peckham Canal. Sand, Cement, Slates, Tiles, and Drain Pipes, supplied at equally low rates. Terms, cash. Builders' material landed, wharfed, and carted.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and fine, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Faviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent. This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

THE PATENT BRICK-MACHINE COMPANY invite orders for their IMPROVED MACHINES, the only ones that manufacture solid bricks equal to hand-made, will shortly be at work in a field near London, accessible by railway, where it may now be seen with bricks of that season. H. C. MOUNT, Secretary.

37, King William-street, City, February, 1856.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed the PATENTEE'S SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REVIEWS OF THE JURIES," page 281, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

DRAUGHTS ROUND DOORS and WINDOWS.—GREENWOOD'S PATENT INDIA-RUBBER STOPS, to supersede list or leather, for the purpose of keeping out dust and draught round doors, windows, closets, shop-cases, &c. making the same air-tight. Price 4d. per foot. Spring Slides for bottoms of doors, as cash.

JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London-bridge.

THE CHEAPEST HOUSE in the Kingdom for PAPER-HANGINGS is J. STRETT and CO's. 11 and 12, Back-road, St. George's East. The attention of the public is especially solicited to view the large and well-assorted stock, at the following low scale of charges, viz.:—

Metal ditto, from 2d. per yard.
Marbles, Sienna, from 3d. per yard.
Staircase Papers, from 4d. per piece.
Passage ditto, from 4d. per piece.

*** Observe the address—J. STRETT and CO. 11 and 12, Back-road, St. George's East.

PAPER HANGINGS! PAPER HANGINGS!! PAPER HANGINGS!!!—Builders, the Trade, Country Dealers, and others, will find an immense STOCK and endless variety of all classes of PAPER HANGINGS, at W. CROSBY'S MANUFACTORY, 23, Lowther Arcade, Charing-cross, London. Splendid new designs, both in machine and block printing, not to be surpassed by any house in England. Patterns sent for approval in town or country. Cheapest house for panel decorations. Terms, Cash.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22 GREAT PORTLAND STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PROVISIONAL PATENT.—A SCHOOL DESK, with folding desk, which combines in one article, a seat with back and locked book cupboards, a writing or reading desk, and a tea-table, adapted for schools, hospitals, barracks, literary institutions, ragged churches, emigrant ships, and wherever economy of space, furniture, and expense are important.—On view in use, at the British School, Craven-hill, Westbourne-terrace. Trade licenses on most liberal terms.—Address, Mr. B. 5, Craven-place, Paddington.

TO BUILDING MATERIAL DEALERS and OTHERS.—WANTED, TWO DOORS or WINDOWS (corresponding), suitable for recesses, about 7 feet 9 inches by 3 feet 9 inches, with either stained, plate, ribbed, or embossed glazing. Also, a Conservatory (without sides), about 12 feet long, 12 feet wide, and 12 feet high. And a superior Statuary Marble, 3 feet 6 inch Chimney-piece.—Address, stating lowest cash prices, and where may be seen, to L. K. No. 20, Gresham-street, City.

TO ARCHITECTS, BUILDERS, AND OTHERS.
MESSRS. FRANCIS, RICKABY, and DUNN beg to call the attention of the above to their IMPROVED REVOLVING WOOD and IRON SHUTTERS, also, to their extensive assortment of BRASS and other METAL SASH BARS, STALL-BOARD PLATES, &c. F. R. and D. having erected new and powerful machinery for the sole manufacture of the above, are enabled to offer them at a considerable reduction of price. Prospectuses can be had or Forwarded, on application to 84a, Gray's-inn-lane, Holborn.

TO BUILDERS and HOUSE PROPRIETORS.—GEORGE ENDICOTT, 5 Alfred-terrace, Cambridge-road, Bethnal-green, is prepared to execute all kinds of JOINERS' WORK, at the lowest cash prices. 1¼ inch four-panel doors, 6s 3d. each; 1¼ inch sashes and frame, 7½d. per foot, and all other joinery at the same ratio. Materials and workmanship of the best description. The entire management of house property undertaken, and the rents collected at a very small per-centage.—Security for the same given to any amount.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned. Workshops, 110, Broad-wall.

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs. Lawrence, Shop-front Builder and Manufacturing Joiner. 1¼ and 1½ four-panel doors from 6s. each; 1¼ sashes and frames from 7d. per foot; 1¼ inch ditto from 8d. Windows fitted with Gribbon's Patent Hinges for cleaning, ventilating, &c. All kinds of joiners' work estimated for according to design.—A List of Prices sent on application.

REES and BAKER, PAINTED and STAINED GLASS MANUFACTURERS, for Cathedral, Church, and other Windows, 26, Hatton-garden, Holborn, London. G. REES and J. BAKER, having recently entered their engagements at Messrs. Powell and Sons' Glass Works, Whitefriars, City, most respectfully beg to inform the nobility, clergy, architects, surveyors, contractors, and the public, that after nearly twelve years' occupation at Messrs. Powell's, in the working and carrying out the most intricate and chaste windows, they have commenced business, and earnestly solicit their patronage, with the assurance of promptness, accuracy, and elegance of style and material. In calling the attention of some of our best architects, they frequently suggest to put the work in the hands of practical men to carry out with care and due regard to the subject of which they treat. G. R. and J. B. being the original operators of the Patent Press and Medieval Glass, will accept such cartoons, drawn by, &c. from architects, amateurs, or the public, however rude the sketch or design may be, they having received in many signal instances the highest approval in Grecian and Italian works of magnitude, where criticism cannot be doubted. Specimens in all forms can be seen between the hours of seven a.m. to Seven p.m. where all orders can be taken and punctually attended to. Arms found and memorial windows carefully painted. Designs and estimates given.

Figures and Subjects from 12s. per foot.
Geometrical Patterns, from 9s. per foot.
Ornamental Quarries, from 2s. 9d. per foot.

By Royal Letters Patent.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

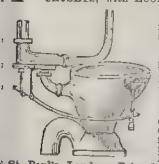
W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street. — Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith. — J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

SUPERIOR LAND DRAINAGE.—

AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.



MILLWALL POTTERY.

WILCOX and CO. Manufacturers of every

description of white and printed CLOSET-PANS, URINALS, TABLES, PLUG-BASINS, &c.

DEPOT—ARTHUR-STREET, NEW OXFORD-STREET.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS,

manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE Powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 23, Old Fish-street, near St. Paul's, London. Price for Closet and Apparatus complete, from 35s. and perfect action guaranteed.

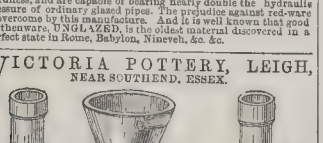
TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES,

acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT DRAIN-PIPES, UNGLAZED,



manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

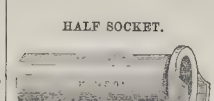
These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

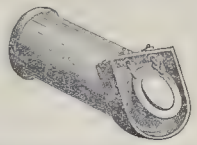
DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

AYLESFORD POTTERY COMPANY, BELVEDERE-ROAD, LAMBETH.



MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.



The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dock-yard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET,

DEPOT, 2 AND 3, HIGH-STREET, LAMBETH.

HALF SOCKET.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HODGAK, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

WILLIAM NORTHEN'S WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

SALES BY AUCTION.

SOUTHAL, Middlesex.—TO BUILDERS, CONTRACTORS, and Others. Three Millions of capital Bricks, lying close to the Grand Junction canal, a branch of which surrounds the field.

BAKER and SON will SELL by AUCTION, on THURSDAY, the 7th of FEBRUARY, at ONE, on the PREMISES, Ordnance Brick-field, near the Southall Station, on the Great Western Railway, about THREE MILLIONS of excellent STOCK, GRIZZEL, and PLACE BRICKS, lying immediately adjoining a branch of the Grand Junction Canal, by which they may be landed and delivered, either at Paddington or to the River Thames, at about 3s. per thousand.—May be viewed the day prior. Catalogues had on the Premises, and of the Auctioneer, Kilburn.

Important unreserved sale of FRENCH and ENGLISH PAPER-HANGINGS, being a consignment from an eminent Parisian house, of the most elegant and elaborate designed decorations, and nearly all the remaining portion of Messrs. ERWOOD and CO.'S immense STOCK of HANGINGS, which, in consequence of the dissolution of partnership, has been removed from their warehouse, No. 66, Watling-street, to be SOLD by public AUCTION by

MR. EDWIN WHITE, at his spacious Auction Rooms, 175, Bishopsgate-street-Without, on TUESDAY, FEBRUARY 5, at TWELVE for ONE o'clock, precisely. The paper hangings consist of elegant golds, rich flocks, satins and damasks neat chintzes, marbles, granites oaks, and others in a multitude of designs, with suitable borders, friezes, and ceilings, and a quantity of painters' and decorators' brushes, will be included in the sale.—The whole may be viewed, and catalogues had the day prior and morning of sale.

CLEARANCE SALE OF BRICKS, TO BUILDERS AND OTHERS.

MR. EDWIN WHITE will SELL by AUCTION, without reserve, at the BRICKFIELDS (late in the occupation of Mr. Geo Frasi, a bankrupt), situate on the west side of the Hackney-road, Hackney, on THURSDAY, FEBRUARY 7, at ONE for TWO o'clock punctually, the remaining portion of the excellent BRICKS, consisting of 380,000 stocks, grizzles and place, which must be cleared away within a month, as the holder's term of possession will cease.—May be viewed the day before and morning of sale, when catalogues may be had on the Premises, and of the Auctioneers, 175, Bishopsgate street Without.

READING, BERKS.—To Railway Contractors, Builders, Brewers, Coal Merchants, Carriers, and Others.

MR. WILLIAM BROWN will SELL by AUCTION, on MONDAY, the 11th day of FEBRUARY, 1856, at ONE o'clock precisely, at the HORSE-TABLES, near the Great Western Railway, and Reading and Reigate Railway Stations at Reading, FORTY first-rate powerful Eight-inch CART-HORSES, in good working condition, the property of Mr. H. Brotherhood, now offered to the public in consequence of the New Line west of the Reading Station being nearly completed. The Auctioneer begs to draw the particular attention of his friends and the public to this superior Stock, which has been selected with great care and at high prices by Mr. Brotherhood, whose well-known judgement has given such general satisfaction at previous sales. Amongst the Stock will be found Fifteen very promising well-bred Cart Colts, rising three years old, which have never been worked. The Horses may be seen at work on the Line near the Reading Station, daily (Sundays excepted), and on the morning of sale at Mr. Hope's Stables, Great Western Tap, close to the Station. Of the Two Days' Sale.—Catalogues may be had four days before the time of sale (or sent by post), on application to Mr. Brotherhood, Railway Works, Chippenham; or at the Offices of the Auctioneer, 154, Friar-street, Reading. Conditions of Sale as usual.

TO COACHBUILDERS, COACH SMITHS, IRONMONGERS, AND OTHERS.

WESTMINSTER BUILDERS' STOCK AND EFFECTS.

MESSRS. EVERSFIELD and HORNE are instructed by the proprietor, retiring from business, to SELL by AUCTION, on the PREMISES, Regency-st. Westminster, on THURSDAY, FEBRUARY 14, at TWELVE for ONE, the STOCK-IN-TRADE, comprising a large quantity of dry deals, planks, and battens, prepared floor battens, dry pine pila &c. sea-one 1 wainscot, useful boards and quartering, old doors, sashes and framing, Portland stone, a copper skylight, &c. Also the valuable PLANT, comprising two young powerful draught horses, three carts, stone truck, blocks and falls, scaffold poles, boards, cords and pulleys, trestles, work benches, barrows, and mortar-boards, a very excellent mahogany desk, with ten drawers, and other effects. May be viewed on day previous, and catalogues had on the Premises, and of the Auctioneers, 46, Parliament-street, or Coal Exchange.

TO BUILDERS, CABINET AND PIANOFORTE MAKERS, AND OTHERS.

MR. LEREW is instructed to prepare for SALE by AUCTION, on the PREMISES, Nos. 41 and 43, Union-street, Somers-town, on the 18th of FEBRUARY, at ELEVEN for TWELVE, on account of the number of lots, about 4,000 feet of MAHOGANY, 1,500 planks, deals, and battens, 100 squares of prepared flooring, 5,000 feet of moulding, dry cut stuff, 4,000 feet of wide pine board, 80 four-panel and sash doors, and other prepared work; nails, ironmongery, ranges, stoves, workbenches, anvil, scaffolding, ladders, barrows, &c.—May be viewed on Saturday prior and morning of Sale, and catalogues had, on the Premises, and of the Auctioneer, Cardington-street, Hampstead road near the Euston station.

TO BRICKMAKERS AND BUILDERS.

MR. LEREW is instructed to procure a Purchaser, by PRIVATE CONTRACT, for 300,000 STOCK BRICKS, and the PLANT for TWO STOOLS. The field is about four minutes distant from the Euston-station.—For further particulars and orders to view, apply at the Offices of Mr. LEREW, Auctioneer, Cardington-street, Hampstead road.

WORKSHOPS or PREMISES.—TO BE LET, in the neighbourhood of Oxford-terrace, Edgware-road, TWO spacious WORKSHOPS, in thorough repair, suitable for any business, and possessing every capability. They are each 43 feet long, 21 feet wide, and respectively 10 feet and 16 feet in height. They have a range of fifty windows along the side, and the upper one has five large skylights. There are two fire-places and ventilating-shafts. The floors are wood, and underneath the lower one is a space for stowage.—For further particulars and terms, apply to Mr. BOLAND, House Agent, Cumberland-place, Hyde-park, in the immediate neighbourhood; or at 38, Bloomsbury-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations. Apply at the Offices of Messrs MORGAN and PHIPSON, Architects, 8, Chancery-lane.

FREEHOLD GROUND, CHANCERY-LANE and FETTER-LANE.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 26th of FEBRUARY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking, on Building Lease for Eighty Years, certain PLOTS of GROUND, situate at the south-west end of Chancery-lane, and the south-east end of Fetter-lane.—Further particulars may be had, and plans seen, on application to Mr. HAYWARD, Engineer to the Commissioners, at the Offices of the Guildhall. The Commissioners will require a plan and elevation of the proposed building to be built, to accompany the offer for approval; and do not bind themselves to accept any proposal, unless deemed advantageous.

JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, January 2, 1856.

HARROW.—FREEHOLD LAND.—TO BE SOLD, 103 ACRES, in a ring fence, and several other eligible plots of FREEHOLD LAND, at a moderate price, contiguous to the Harrow Railway Station, sure undesired and interested by capital rents. Residents are entitled to the services of the Harrow School, and the London and North Western Railway Company offer to persons building houses of approved elevation, worth 50l. per year each, a free first-class pass ticket to Harrow station and Euston square, for eleven years. There is an abundant supply of excellent water, and very superior brick-earth on the land.—Apply to WILLIAM B. COOPER, Esq. Solicitor, 7, Verulam-buildings, Gray's-inn.

BUILDING-GROUND, Clerkenwell, in the direct line of the new street from Farringdon-street to Islington.—GROUND TO BE LET for third-rate houses, with or without workshops and back entrances in capital site for a public-house.—Apply to Messrs. ROBERTS and HANCOCK, 3, Serjeants'-inn; or to Mr. RANDALL, Esq. Architect, 25, Great Winchester-street, City, between the hours of TEN and FOUR o'clock.

TO BE LET, SEMI-DETACHED VILLAS, in immediate neighbourhood of Victoria New Docks, and in parish of Plaistow. Each house contains lofty parlours and drawing-room, with folding doors, kitchen, cellarage, and W.C. They are completely fitted up with every convenience.—Apply to Mr. Arundell, Builder, Plaistow. Externally stained oak and varnished, and all are papered with newest patterns. They are ready for immediate occupation, and, in consequence of the failure of the builder, they will be let for the low rent of 22l. per annum. Taxes are very moderate, and railroad and omnibus convey one within easy distance.—Apply to Messrs. WM. G. and E. HARRISON, Accountants, 28, Bloomsbury-square, London; at whose Office views and drawings may be seen.

MANUFACTURING WATERSIDE PREMISES, with STEAM POWER.—TO BE LET on LEASE, spacious MANUFACTURING PREMISES, well adapted for a Distillery, Manufacturing Chemist, or Colour Manufacturer; situate on the banks of the River Lea Canal, within five minutes' walk of the Bow Station of the Black-wall Railway. The site occupies a total area of about one acre and a half. There is a commodious family residence, with garden, a wharf, with frontage of 50 feet, an extensive well-constructed steam-engine of 14-horse power, with boiler and pumps, with pipes to a large iron tank, capable of holding 10,000 gallons of water; also a large filtering-pond or reservoir for water.—Apply to Messrs. FULLER and HORSEY, Billiter-street, City.

WESTON-SUPER-MARE, SOMERSET. The WEST COTTAGE ESTATE.—FREEHOLD LAND for the ERECTION of 100 HOUSES, in the centre of the town, and overlooking the sea, TO BE SOLD, in one or more lots, on very reasonable terms.—Further particulars of B. G. PHILLIPS, Esq. Weston-super-Mare.

TO CAPITALISTS, BUILDERS, and SPECULATORS.—The valuable BUILDING ESTATE of "Oak Bank," surrounded on all sides by good roads, having extensive frontages to the river Itchen, and fine views of the river as it is TO BE LET on Building Leases for 1,000 years from the present proprietor. This valuable building property is within a few minutes' walk of the docks and town of Southampton, and being without the municipal boundary, the rates and taxes are almost nominal. Its peculiar formation permits it to be made available for dwellings suitable to every class. Further particulars will appear in a future advertisement, and in the mean time may be viewed and full information obtained on application to Mr. ALFRED G. LOCK, Architect, Surveyor, and Land Agent, offices, Onslow-road, Southampton; on and after the 26th day of February.

TO BUILDERS and OTHERS.—TO BE LET, on a Repairing Lease for thirty-eight years, at 120 guineas a year, very capital PREMISES, near Middlesex Hospital, comprising a large house, and in the rear, with separate entrance, a tier of capital workshops. The lease would be a beneficial one, as the present rental of the premises is 212l a year, and capable of great improvement. Apply to Mr. SALMON, 23, Bucklersbury, City.

TO BUILDERS.—TO LET, on a re-building lease for ninety-nine years, FIVE HOUSES, Melbourne-street, Weston-street, Pentonville. They form one corner of the street, with two frontages about 100 feet each. Land-tax redeemed; with a new sewer within ten years. The ground-rent 40l. per annum.—Apply to Mr. BUCKLEY, No. 5, Guildford-street East, Wilmington-square.

WHARF and STEAM SAW-MILLS TO BE LET.—The extensive premises, known as the "ABBEY WHARF," Kingston, Surrey, having frontage towards the Kennet; and powerful CRANES, on which a large timber trade has for many years been carried on. Also, the powerful, newly-erected STEAM SAW-MILLS, now in full work; with counting-house, large warehouses, stabling, &c. The trade is capable of being greatly increased; and the Premises and Steam-Mill equal to carrying on business to any extent. For particulars and terms, apply to Mr. WILLIAM BROWN, Surveyor and Estate Agent, 154, Friar street, Reading. N.B. Immediate possession may be had.

TO BUILDERS and OTHERS.—TO BE LET, at Castlenau, Barnes, TWO desirable PLOTS of LAND, suitable for the erection of detached or semi-detached villas for private occupation. For particulars, apply to GORDON STANHAM, Esq. Architect, St. Alban's Cottage, North-End, Hammersmith.

KINSON, DORSETSHIRE.—SALE of VALUABLE FREEHOLD PROPERTY. To BREWERS, CLAY-MERCHANTS, POTTERS, and Others.—TO BE SOLD, by PRIVATE CONTRACT, the POTTERY HOTEL, near the Kinson Clay-Works, with one and a half from Poole, on the Ringwood road. Also to be Sold, Four Acres of Clay Land, suitable for all kinds of pottery and brick purposes, with a good supply of sand and water.—For particulars, apply at the Pottery Hotel; and of Mr. T. RICKMAN, Maltster, &c. Poole.

TO SURVEYORS, AUCTIONEERS, &c.—The Advertiser has LAND TO LET, eligibly situate near the Regent's Palace, and is open to treat for letting the same. No party need apply but those who have a connection for letting, and their premises in a good public situation.—Address, A. B. 75, Belsize-road, St. John's-wood.

FREEHOLD GROUND for BUILDING ON.—TO BE LET, upon BUILDING LEASES, PLOTS of GROUND, in that healthy locality, Holloway, two or three minutes from the Archway Tavern. Omnibuses every four or five minutes to all parts of London. Corner of St. John's-road, where houses let as fast as built. For particulars, apply to Mr. H. FETHERS, 9, Poultry. The leases direct from the freeholder. Money advanced.

IMPORTANT to SOAPMAKERS, CAPITALISTS, and OTHERS.—TO BE LET, all those excellent and complete SOAP WORKS, situate at Bloomfield, in the parish of Tipton, in the county of Stafford, Public Office, cutting and framing rooms, store-room, pressing-room, boiling room, with four copper's soap and lye boiling rooms adjoining, counting-house and office, store room and boiler's office, cutting cellar, and two packing-rooms attached; melting and bleaching boiler, carpenters' shop, machine and house, office, warehouse, sailing lespan, block ash furnace, with sheds attached; smiths' shop, stables, and gig-house, large yard and reservoir, with a good supply of water. The premises are lighted with gas, and surrounded by a substantial wall and entrance-doors; are particularly adapted for the business, and LET for all it every necessary convenience, and now in full operation. They are situate in the centre of the district, and within short distances of extensive collieries, ironworks, canals, and the populous districts of the Stour Valley, at Oxford, Worcester, and Wolverhampton Railways. The proprietors are giving up the premises in consequence of other engagements.—To treat, applications are requested to the Leader Messrs. JAMES and JOSEPH HIPKINS, on the Premises; or to Mr. SOLOMON POWELL, Surveyor, &c. Tipton, Staffordshire.

TO ARCHITECTS.—TO BE DISPOSED OF, an ARCHITECT'S PRACTICE, which has been established four years, in a large and rapidly-improving market-town, in the West Riding of Yorkshire. For particulars, application may be made to Mr. J. W. BLAKELEY, Solicitor, Dewsbury.

TO DECORATORS, BUILDERS, and OTHERS.—OLD-ESTABLISHED BUSINESS in the heart of the City, to be DISPOSED OF, together with the Lease of the eligible Premises, Fixtures, and Stock-in-Trade. Persons of open command may have full particulars of Mr. BEBELMAN, 5, Cheapside (c. 29.)

A BUILDER'S BUSINESS TO BE DISPOSED OF, near the Regent's Park, in St. Pancras, Camden, & Pentonville. A tender may be given with the Premises, or without. Part cash, or the whole paid by instalments, if preferred.—For further particulars, apply (prepaid), to C. A. R. Office of The Builder.

TO ARCHITECTS AND SURVEYORS.

JOHN WILLIAMS begs leave to inform his friends and the profession in general, that the BUSINESS of a BUILDER and DECORATOR, carried on by his late father, at the Colonnade, Russell-square, for nearly half a century, will still be carried on by him. He therefore most respectfully solicits a continuation of the favours so liberally bestowed on his late father, pledging himself that no pains shall be wanting to carry on the business in a manner that will merit the approbation of those who may favour him with their commands. January, 1856.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brice) & WYMAN (A. L.), Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by them at CHARLES WYMAN'S, "The Builder" Office, No. 13, Hunter-street, in the Parish of St. Pancras, Covent Garden, all in the County of Middlesex.—Saturday, February 2, 1856.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera, and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c, the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 3l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the Museum and Library, either for consultation or copying, as well as to all the public lectures of the Department.

The schools for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 3l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

ARCHITECTURAL EXHIBITION and COLLECTION of PATENTS and MANUFACTURES connected with Building, NOW OPEN at the GALLERIES, 9, SUFFOLK STREET, Pall-mall East. Admission, One Shilling; or to the Galleries at all times, and to all the Lectures, by season tickets, Half-a-Crown each. Lecture for TUESDAY EVENING, FEBRUARY 12, at EIGHT o'clock, "The Influence of Light and Shadow on Architectural Composition," by THOS. ALLOM, Esq. All particulars at the Galleries.—No lecture on February 5th.

TO ENGINEERS AND SURVEYORS.

THE LOCAL BOARD of HEALTH of HASTINGS require a SURVEYOR able to undertake the duties of that office, under the Public Health Act, 1848. He must be competent to prepare plans, sections, drawings, and estimates, and to be conversant with the practice of engineering generally, and able to superintend and carry out the execution of all necessary works of drainage and others, which will fall within his duties. He will be required to devote the whole of his time to the duties of the office. Salary, 200l. per annum. He will also have to act as Surveyor to the Corporation, with an additional salary of 30l. per annum.—Applications, with age, testimonials of qualification and competency, to be addressed to "The Local Board of Health," indorsed "Application for Office of Surveyor," are to be forwarded, under cover, to the Town Clerk, Hastings, on or before the 21st day of FEBRUARY next.

JOHN G. SHORTER, Town Clerk.

Hastings, January 19, 1856.

COMPETITIONS.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

PLANS, DESIGNS, and DRAWINGS are requested for the ERECTION of TWO CEMETERY CHAPELS, under one roof, together with a Lodge and Entrance-Gates, for the Grantham Burial-Ground containing six acres of land, to include ground-plans and elevations, and to be accompanied by approximating estimates of the expense. The buildings to be faced with Ancaster stone, and the plinths to be of Mansfield stone. The whole expense (including fittings, &c. of chapels) not to exceed the sum of 1,500l. 10l. is offered for the plan of the chapels and buildings considered to be the best, unless the architect shall also contract for the works, and 5l. for the second best. The whole of the plans, &c. to be sent to me, sealed and endorsed, but without any name or distinguishing mark, on or before SATURDAY, the 1st day of MARCH next, inclosing a sealed letter in each case from the person forwarding it.

By order of the Burial Board,

ROBERT HENRY JOHNSTON, Clerk

Grantham, Feb. 5, 1856.

EAST DEREHAM CORN-EXCHANGE COMPANY (provisionally registered.)—Architects desirous of furnishing PLANS for the proposed CORN EXCHANGE, may see a plan of the site, and obtain necessary particulars, on application at the Office of HENRY COOPER, Esq. East Dereham, Norfolk, the Secretary of the Company, on and after the 12th inst. The architect whose plans are accepted will be paid 10l. for such plans. Plans will not be received after WEDNESDAY, the 27th day of MARCH next. All plans to be sent sealed, and to be on the scale of one-eighth of an inch to the foot.

East Dereham, 2nd February, 1856.

N.B.—A specification stating the general mode of construction, the materials to be used, and the manner of finishing, is to be sent with the plans to me as the Committee in their decision. The architect whose plans are accepted will afterwards be required to put the specification into a form suitable for builders to tender from.

TO BUILDERS.

NEW FARMSTEAD.—Persons desirous of TENDERING for FARM BUILDINGS, to be erected at Walton Grounds, Aynho, near Banbury, Oxfordshire, on the estate of Col. North, M.P. may see the plans and specification of the works at the Office of Messrs. DANBY and CALES, Auctioneers and Estate Agents, Banbury. The Tenders are to be delivered at the Office of Mr. J. F. CLARK, Architect, Newmarket, on or before SATURDAY, the 23rd of FEBRUARY. The lowest or any Tender will not necessarily be accepted. Quantities can be obtained on application to Mr. CLARK.

TO BUILDERS.

THE BURIAL BOARD for the PARISH of WALTHAM HOLY CROSS, in the County of Essex, are prepared to receive TENDERS for the ERECTION of TWO MORTUARY CHAPELS, at the New Cemetery, Waltham Abbey. The Drawings, specification, &c. may be seen at the Office of the Architects, Mr. S. HEWITT, Montague Close, Southwark; and at Mr. J. JESSOPP'S Offices, Waltham Abbey. Tenders to be sent in on or before MONDAY, FEBRUARY 25, next, at SEVEN o'clock, to Mr. J. JESSOPP. The Board do not bind themselves to accept the lowest nor any Tender.—February 8, 1856.

TO PAVIORS AND OTHERS.

NOTICE is hereby given that the Commissioners of Paving in Abingdon, are desirous of receiving TENDERS from persons willing to contract for PITCHING and LAYING DOWN, without curb, 5,000 feet and upwards of the best of the YORKSHIRE PAVING STONE, of two inches and a half thickness, and not less than two feet by three feet, in the surface, in such parts of the streets in Abingdon as the Commissioners shall determine; to be laid in the best gravel mortar, in courses varying from six feet to three feet in breadth, except such parts of the footways as are less than three feet, which must be laid with stone of corresponding breadth, of which eighteen inches shall be the minimum; the contractor to restore and make good all the pitching which may be disturbed in laying the new paving stone, the paving to be measured after the work is done to the satisfaction of the Commissioners or their Surveyor. Tenders specifying the price per square foot, to be sent to the office of the Clerks, in Abingdon, on or before the 1st day of MARCH next.

MORLAND and GODFREY, Clerks to the Commissioners.

Abingdon, 8th February, 1856.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS—ORDNANCE WORKS—The Commanding Royal Engineer of the Dover District hereby gives notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall-mall, London, on or before WEDNESDAY, the 20th day of FEBRUARY, 1856, from persons desirous of contracting for extensive ADDITIONS and ALTERATIONS to the WESTERN HEIGHTS BARRACKS, at Dover. Drawings and specifications of the works to be executed, may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock from FRIDAY, the 1st of FEBRUARY, to TUESDAY, the 19th of FEBRUARY, 1856 Sundays excepted. A person belonging to the Royal Engineer Department will attend each day at the Western Heights Barracks, from TEN to TWELVE o'clock, to point out the work and explain the drawings. The party whose Tender may be accepted for the work will be required to enter into a bond with two eligible securities, jointly and separately, to be bound under a penalty of 2,000l. for the due performance of the contract. Tenders for the above work to be addressed to the Director General of Contracts, Pall-mall, London, and endorsed "Tender for work at Dover." N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office Dover January 16th, 1856

CONTRACTS. — Royal Engineer's Office, Chatham, 30th January, 1856. NOTICE is hereby given, that TENDERS will be received by the War Department, Pall-mall, London, on or before MONDAY, the 18th day of FEBRUARY, 1856, for the performance of the following branches of ARTIFICERS' WORK, for the War Department, at the undermentioned Stations for a period of two years, from the 1st of APRIL, 1856, determinable at any period after one year, on either party giving to the other three months' notice in writing, viz.:—

At CHATHAM.—Plumbers' Work.

At GRAVESEND and its Environs, comprising Tilbury Fort, Shorne, Mead, and Cliff Barracks.—Bricklayers', Painters', Glaziers', and Paperhangers' Works. Plumbers' Work.

Separate Tenders to be made for these two Stations, as well as for the different Contracts; nevertheless Tenders for Gravesend and Fortress may be submitted for the several trades to one Contractor. Printed forms and conditions of Contract may be obtained on application at the Royal Engineers' Offices, at Chatham, and at Gravesend, from the 4th to the 10th of FEBRUARY (Sunday excepted), after which no Tender can be admitted after the said 18th day of FEBRUARY, 1856.—The War Department reserve to themselves the right of rejecting any or all Tenders that may be presented.

TO BUILDERS

THE GUARDIANS of the POOR of the HERSTMONCEUX UNION are desirous of receiving TENDERS for the ERECTION of a new UNION WORKHOUSE, for the accommodation of 200 in the with Board and Committee Room, Master and Matron's Offices, Infirmary, and the buildings at Redingfield, near Haverhill, Suffolk. Plans, specifications, and conditions may be seen at the Office of the Clerk to the Guardians, at Haverhill, and at the office of Mr. JOHN FRANCIS CLARE, Architect, Newmarket, where full particulars can be obtained. Tenders to be delivered at the Office of the Clerk to the Guardians, before NINE o'clock on FRIDAY morning the 29th day of FEBRUARY next, after which time no Tenders will be received. The contractor will be required to give security to one-fourth the amount of his contract, for the due performance of the work to be completed by the 1st day of JANUARY, 1857. The Guardians do not bind themselves to accept the lowest or any Tender. Dated 25th January, 1856. By order of the Board of Guardians.

JOHN H. JARDINE.

Haverhill, near Newmarket, Suffolk.

TO BUILDERS.—The New Asylum for Fatherless Children.—TENDERS are required for the ERECTION of an ASYLUM at Purley, near Croydon, on the trunk line of the Brighton and South Eastern Railway. Butders who may be desirous of Tendering, may inspect the drawings and specifications of the works at the Office of the Architect, W. B. MOFFATT, Esq. 2, Adelaide-place, London-bridge. Lithographed bills of quantities and forms of Tender, and of schedule of prices may be had upon application to Mr. BALAM and LEE, 10, Buckingham-street, Strand, on payment of two guineas. Sealed Tenders are to be sent to the Office of the Charity, 33, Poultry, under cover, addressed to the Secretaries, not later than TWELVE o'clock on THURSDAY 28th inst., and no Tender must in any case be received after the time specified. The party whose Tender may be accepted will be required to enter into a bond, with two responsible sureties, jointly and severally in the sum of 3,000l. for the due performance of the contract. The Board of Managers do not bind themselves to accept the lowest Tender.

DAVID W. WIRE, } Hon.
THOMAS W. AVELING, } Secs.

Office, 33, Poultry, 1st February, 1856

BURIAL GROUND, NORTHWOOD, Isle of Wight.—To BUILDERS.—Persons desirous of CONTRACTING for the ERECTION of CHAPELS, LODGE, ENTRANCE-GATES, &c. near Cowes, for the Northwood Burial Board, can inspect the plans and specifications at the Office of the Architect, Mr. [illegible] Great James-street, Bedford-row, London, and after that date Tenders to be delivered on or before MONDAY, the 25th inst. at the Office of the Board, Cowes, addressed to [illegible] Esq. Other Tenders

HENRY JAMES PAVANT, Clerk to the Board.

West Cowes

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of SCHOOLS at PWLLHELI, in the county of Carnarvon, to contain [illegible] are requested to call at the Office of Mr. Street, No. [illegible] Strand, where they will find Messrs. WILLMOTT and ASHDOWN, Architects, Liverpool, ready to receive all Tenders sent in to them, and to contract with the lowest Tender.

February 6, 1856. WILLMOTT and ASHDOWN.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CAUTION.—S. W. SILVER and Co. have found it necessary to insert on all their manufactures, thus "S. W. SILVER and CO. WORKS, NORTH WOOLWICH."

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of GUTTA PERCHA TUBING, the Right Honourable the Lords of the Committee of Privy Council for Trade, &c., have directed FROM SHEERNESS AND PORTSMOUTH DOCKYARDS, and from the Isle of Wight, Specimens of Gutta Percha Tubing to be submitted to a careful examination by the Engineer of the Board of Trade, who has carefully examined the same, and has now reported that it has been in use for nearly Seven Years, and is found to be perfectly sound and free from decay.

Now from this Testimonial it will be seen that the CORROSIVE WATER from the Isle of Wight has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY ROAD, LONDON.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

THE NEW PATENT
INTERLOCKING CURVILINEAR REVOLVING IRON SHUTTER

IS GREATLY SUPERIOR TO ALL OTHERS FOR
LIGHTNESS, STRENGTH, SECURITY, DURABILITY, AND EASE,
AND ALSO MUCH CHEAPER.

MANUFACTURED BY

BUNNETT AND CO. ENGINEERS, FOUNDERS, &c.

ORIGINAL PATENTEES OF REVOLVING IRON SHUTTERS, No. 26, LOMBARD-STREET, LONDON; and DEPTFORD, KENT.

The edges of each lath are accurately turned by powerful PATENTED MACHINERY, and slide endways into each other, FORMING A COMPLETE HINGE THROUGHOUT, interlocking so effectually that no force can separate them; and if made of the best galvanized iron, are almost indestructible.

A CHEAPER MODIFICATION FOR WAREHOUSES, COTTAGES, PORTABLE BUILDINGS, &c. ALSO FOR EXPORTATION.

PATENTEES OF METAL SASH-BARS AND MOULDINGS.

Descriptive Illustrated Prospectuses and all necessary information forwarded on application.

PATENT HOOP-IRON BOND FOR BUILDING PURPOSES.

TARIFF OF PRICES
Beyond the current Price of Hoop-iron.

The undermentioned Gauges are kept in stock; but any Gauge or Width will be supplied within a few days, at a small advance on the following prices:—

Gauge.	In wide.	Per 1,000 ft.
No 16	1¼	7s. 6d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.

Plan and Elevation of Bond, showing Position and Form of the Claws.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 12 inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent that a direct and grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—463, OXFORD-STREET.

Carriage, 5s per foot.
Fixing, 5s per foot.

This Suitable KITCHEN RANGE, the Manufacturer has much gratification in stating, has been in use several years, and given the utmost satisfaction. It may be used either with the fire open or close, thereby avoiding the objection so naturally felt against having the fire at all times shut up, which is well known to generate a close unhealthy atmosphere.

The Prize Medal and Honourable Mention was awarded to this Range at the Great Exhibition of 1851.

To be seen in operation at the Manufactory,
J. SHERWIN, 32, TABERNACLE-WALK, FINSBURY.

ITALIAN and GALWAY MARBLE QUARRIES.—Depot, WHITEHALL WHARF, Parliament-street, Westminster.—Mr. FRANKLIN begs to invite the Sculptors, Marble Masons, Builders, &c. to inspect his extensive STOCK of Italian, Irish, and foreign MARBLES, which he is constantly importing in blocks and slabs, consisting of upwards of twenty different varieties, which he is enabled to offer at very reduced rates. Several large blocks of statuary, suitable for sculpture, &c. now landing.

TO BUILDERS, MARBLE MASONS, AND OTHERS.
THE LIZARD SERPENTINE COMPANY have to acquaint the public, that the Serpentine Chimney-pieces and other articles, recently sold by public auction in London, were not the produce of any of the Quarries belonging to the LIZARD SERPENTINE COMPANY, which continues successfully to carry on its business in Slab and Manufacture; Goods, in stone of very superior quality, and in great variety of colour, at the Factory, Poltesco, Lizard. Show-rooms, 20, Surrey-street, Strand.
HENRY COX, Manager, Poltesco, Lizard.
F. W. RUFFLE, Agent in London.

SERPENTINE.—The attention of Architects, Builders, and Masons is invited to this very beautiful material, which is rendered useful in the highest degree, from the brilliancy of its polish, and resists being unsusceptible of injury from acids or crease. Chimney-pieces, tazzas, vases, bust-stands, fonts, church columns, slabs, and a variety of ornamental articles are manufactured by the extensive Works of the LONDON and PENZANCE SERPENTINE COMPANY, Penzance, Cornwall. Varieties of the above articles are constantly on sale at the Company's Depôt, LOWER BELGRAVE-WHARF, MACCLESFIELD-STREET NORTH, CITY-ROAD, and also at their Stall in the Mineral Manufactures Court, Crystal Palace, Sydenham
N.B.—This Company obtained a Gold Medal at the Great Exhibition of 1851, a Silver Medal from the Royal Cornwall Polytechnic Society, and a Bronze Medal at the Paris Exposition of 1855. C. ADENEY, Secretary.

Lloyd's Marble Wharf, Thames-bank, Pimlico, Adjoining Vauxhall-bridge.
ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the provinces of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

TO SCULPTORS, BUILDERS, MASONS, &c.
B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK composed of statuary, vein, Sicilian, black and gold dove, Bardilla, Sienna, and Breccia, in Block and particularly to the attention to a large quantity of his best statuary, sixty blocks, all recent landed.
Monuments, vases, and statues, finely executed in Italy.
Carrara Wharf, Thames-bank, Pimlico.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney Pieces in the Metropolis, consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Anne's, and Serpentine Marble, suitable for Dining Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

STONE, GRANITE, and MARBLE.—
BRAMLEY FALL, CAEN,
DARLEY DALE, FARLEY DOWN,
HARE HILL, HUDDERSTONE,
PORTLAND, and various other Bed and Slab.
Yorkshire Paving, Landings, Steps, Sills, Sinks, Coping, &c.
Granite Blocks, Trams, Curbs, Pitching, &c.
Veining Slabs, Chimney Pieces;
Marbles, in Blocks and Slabs.
At FREEMAN'S Stone Wharfs, Millbank-street, Westminster; City-road Basin; and Deptford.

DARLEY DALE STONE.—This Stone, introduced by Sir Charles Barry at St. Edward's Grammar School, Birmingham, and well known as having been selected for
ST. GEORGE'S HALL, LIVERPOOL,
and numerous works, including the Railway Station, Birmingham; Borough Bank, Liverpool; Evesham-bridge; Mr. Beaufoy's Schools, Lambeth; and the Portico and Corridor of the Town-hall, Leeds; is kept in considerable quantity at the Darley Dale Stone Wharf, City Basin, London.—Apply to W. and J. FREEMAN, Millbank-street, Westminster; or GEORGE WALL, at the Quarries, near Matlock.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman, Caen, begs to state shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Town-hall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND and YORK-HIRE STONE

BATH STONE.—HENRY STONE, QUARRYMASTER, begs to inform Architects, Builders, and others, that he still continues to supply the best COMBE DOWN, HAMPTON DOWN, and BOX GROUND WEATHER STONE, delivered in the trucks at Box or Bath station on the most reasonable terms. H. S. begs to call particular attention to his Hampton Down Stone, it being of a very fine texture and rich colour, adapted for either external or internal purposes. Ashlar and plain Range Stone cut to order. Curious Sicilian Basil and delivered to any part round the coast.—Residence, WIDCOMBE, Bath.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

ANCASTER STONE, so remarkable for its free working quality, combined with colour and durability. Price, and cost of transit to any part, may be obtained, upon application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

YORKSHIRE STONE.—THOMAS TUNEY, Stone Merchant, Tanfield-place, Leeds, begs to inform Architects, Surveyors, and Local Boards, that he can supply direct from his Quarries, by water or railway, Paving, Landings, Steps, &c. cut out to sizes, on the most advantageous terms.—Prices sent on application.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, IDLE, near LEEDS,
Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS.
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL,
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

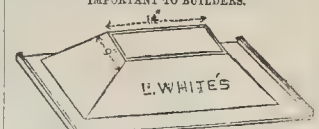
GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terrace at the Crystal Palace, supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Sills, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

FOR MACADAMIZING ROADS.—The HARDEST and most DURABLE STONE.—The Proprietor of an extensive Quarry at Duncannon Rock, containing Blue Elvan Granite, is prepared to supply any quantity of the above Stone, its durability having been tested, and proved to be 25 per cent. harder than Guernsey Granite.—For further particulars apply by letter to Mr. JOHN NEWTON, Norway-wharf, Hertford-road, Kingsland-basin.—Two Coal Waggons for Sale.

SLATING.—T. B. HANNAFORD is not only in a position (through having a large share in a Slate Quarry) to execute any number of the above work, at extremely low prices, but guarantees a first-class material, in all respects similar to the slates he has used in covering the principal mercantile and governmental buildings in the City—Travaiga Wharf, Rotherhithe.



PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST CLASS MEDALS.—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lobe-tables, chiffoniers, consoles, &c.; baths, baptistries, sitar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, passages, and dairies, street-pavement, &c. Full information on application to Mr. MAGNUS, as above, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Hertfordshire and Hertfordshire Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in any quantities at Messrs. FREEMAN'S, Millbank street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

O. McCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened, by the yard or per barge. Stocks, lime, and old bricks. Rubbish delivered per barge, in any quantity, alongside the Thames.

PAVING, 9s. 9d. per SQUARE YARD.—Basements, Footways, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 51, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contracts supplied to any extent.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building.
Price from 8s. 6d. each, according to size.
IRON GIRDERS and COLUMNS to MODEL or DRAWING
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O.G. Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SOUTH WALES RAILWAY.—Notice is hereby given, that the next HALF-YEARLY ORDINARY MEETING of the Proprietors in this Company, will be held, pursuant to the Act of Parliament, at the GREAT WESTERN ROYAL HOTEL, PADDINGTON, on FRIDAY, the 29th day of FEBRUARY instant, at ONE o'clock precisely, for the election of four directors and one auditor, in the place of the same number who will retire by rotation, and for the general purposes of business.
C. R. M. TALBOT, Chairman.
The Transfer Books will be Closed on and after the 15th instant, and will not be re-opened until after the said Half-yearly Ordinary Meeting on the 29th instant.
By order,
FRED. G. SAUNDERS, Secretary.
South Wales Railway Office, 10, Eastbourne-terrace, London, February 6, 1856.

SPECIAL NOTICE.
The Books of the Society close on 1st of March, and Proposals lodged at the Head Office, or with the Agencies, on or before that date, will secure the advantage of the present year's entry, and of One Year's Additional Bonus over later Proposals.

Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval appointments.
The Office being on purely proprietary principles, no partnership among policy holders is involved.
Full prospectuses, proposal papers, &c. apply to
MANLEY HOPKINS, Resident Director.

PROVISIONAL PATENT.—A SCHOOL FORM, with folding desk, which combines in one article a seat with back and locked book cupboards, a writing or reading desk, and a ten-table, adapted for schools, hospitals, barracks, prisons, institutions, &c., and for domestic and artisans' shops, wherever economy of space, furniture, and expense are important. On view in use, at the British School, Craven-hill, Westbourne-terrace. Trade liberties on most liberal terms.—Address, Mr. B. 8, Craven-place, Paddington.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSSE'S WHOLESALE WAREHOUSE, 7, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this Establishment.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that **FOUR-FIFTHS** of the **ROUGH PLATE**, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by **HARTLEY'S PATENT**—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for **RIDGE** and **FURROW ROOFS**, giving a SPAN of **TWELVE FEET**, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders **BLINDS UNNECESSARY**, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

January 1, 1855. **** Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

Show-rooms, 40, Broad-street-buildings, City; 4, Russell-place, Fitzroy-square; 112, New-street, Birmingham, &c. &c.

THE SEVRES GLASS COMPANY.

LEGENDRE, TURPIN, AND CLARK'S

Establishment for the supply of Crystal White Sheet Glass, First, Second, and Third Quality; Window Glass, Shades, Potiche, Lamp Glasses, Bottles, and other Articles in White Glass, at

131, UPPER THAMES-STREET.—WORKS: SEVRES, NEAR PARIS.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor of heat and deadening Sound.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

REES and BAKER, PAINTED and STAINED GLASS MANUFACTURERS, for Cathedral, Church, and other Windows, 25, Hatton-garden, Holborn, London. G. REES and J. BAKER, having resigned their engagements at Messrs. Powell and Sons' Glass Works, Whitefriars, City, most respectfully beg to inform the nobility, clergy, architects, surveyors, contractors and the public, that after nearly twelve years' occupation at Messrs. Powell's, in the working and carrying out the most intricate and classic windows, they have commenced business, and earnestly solicit their patronage, with the assurance of promptness, accuracy, and elegance of style and material. In calling the attention of some of our best architects, they frequently suggest to put the work in the hands of practical men to carry out with care and due regard to the subject of which they treat. G. R. and J. B. being the original operators of the Patent Press and Medieval Glass, will accept such cartoons, drawings, &c. from architects, amateurs, or the public, however rude the sketch or design may be, they having received in many signal instances the highest approval in Grecian and Italian works of mannitude, where criticism cannot be doubted. Specimens in all forms can be seen between the hours of Seven a.m. to Seven p.m. where all orders can be taken and punctually attended to. Arms found and memorial windows carefully painted. Designs and estimates given.

Figures and Subjects from 12s. per foot.
Geometrical Patterns, from 5s. per foot.
Ornamental Quarries, from 2s. 9d. per foot.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 295, Oxford-street.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

½ inch White, 13s. 6d. per square.		½ inch Yellow, 15s. per square.	
¾ ditto	18s. "	¾ ditto	16s. 6d. "
1 ditto	18s. "	1 ditto	20s. "

Battens, 36s. per load.

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.

ST. PANCRAS SAW-MILLS, Camden-place-street, Old St. Pancras-road.

GEORGE SMITH, TIMBER-MERCHANT, LONDON.—Address to No. 18, Binfield-road, Clapham-road, Stockwell; or Jamaica Coffee-house, City. Goods delivered from the Docks. PREPARED FLOORING, &c. from the Saw-mills. Goods in Bond for Exportation.

N.B. A large Stock of Dry Prepared Flooring, &c. from Two to Four Years Old.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from 4-inch to 14-inches thick, in Waute or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses. Slating Battens, Pantile Laths, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

OAK SASH-CILLS, QUARTERING, &c. ready cut out to sizes and lengths required, at the lowest price.

Address, E. SIMMS,

SAWING, PLANING, AND MOULDING MILLS, KING'S-ROAD, CHELSEA, AND WILTON-ROAD, PIMLICO.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shop-fitters to his carefully selected MAHOGANY, suitable for Counter Tops, and to his seasoned Materials for builders, cabinet and blind makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TO BUILDERS, CARPENTERS, &c.

SAMUEL CROWHURST, Jun. begs to call the attention of Builders, Cabinetmakers, &c. to his Stock of seasoned and well-assorted Timber Goods, Deals, and Mahogany, in Logs, Planks, Boards, &c. at prices which will be found equal if not less than any advertised. Country Builders supplied on the most liberal terms.—Timber-yard, Hanover-street, Walworth; and Francis-street, Newington, near the Church.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps.—Please note the address 20, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mills, Canal Bridge, Hull, Kent, all Builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, ready to convert the same into charcoal or firewood. Also, a quantity of THORN BUTTS, suitable for Turning purposes. Hull is within twelve hours of London, and is only three miles from Ilford and Romford Stations, on the Eastern Counties Railway; and the premises adjoin the Ilford Wharf.—For particulars apply to Mr. JOHN CLUTTON, 9, Whitehall-place, Westminster; and to Mr. GEORGE MAUDIE, Padnall-green, Ilford.

TO CARPENTERS and BUILDERS.—Yellow Deals, 4d. to 6d. per foot; Yellow Battens, 2½d. to 3d.; White Dram Battens, 3½d.; Spruce Deals, 3½d.; Fine Planks, 4d. to 8d. Sent free within two miles.—EDWARD SHEFFIELD, Timber Merchant, Lower-street, Wharf, Isle of Dogs.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, extensively used in the Continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 4s. per foot superficial may be inspected at the Patentee's Manufactory, where it can be obtained of Mr. REID, 4, Oxford-terrace, Maida-hill, Paddington, or of Messrs. ARROWSMITH and CO.'s, New Bond-street.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Bethnal-green, London.—The Proprietor of the above works has recently purchased the publishing, and trade rights, of Mr. Wells's system of Machine Carving, generally recommended in Mr. Weale's Treatises, and now enables Builders and others to supply themselves with the utmost promptitude. Every description of Carved Work and Tracery, cut by the above machine, especially adapted for Pulpits, Lecterns, Reading-desks, Screens, Window-sills, Tables, Chairs, Couches, Sofas, Bed-posts, &c. Specimens of Carved Work, suitable for various purposes, may be seen at the Works, and estimates and drawings supplied.

LATHS.—Full tale Baltic single LATHS, 2s. per load, cash, at H. ARUNDELL'S, Wood-street, Blackfriars-road.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 64, Jarrett-street, the corner of Mount-pleasant, Sekforth-square, and Decorative Varnishes.

TIMBER TRADE.—WANTED, a BUSINESS or PARTNERSHIP, by an experienced gentleman, or would undertake the manager rent of a business and introduce capital, upon unexceptionable security.—Address, with full particulars, to R. W., care of Messrs. Algar and Stocker, 11, Clement's-lane, Lombard-street.

TO BUILDERS &c.

OAK GRAINING, in OIL, 3½d. per yard; Mahogany, 4d. per yard. Other Woods at low prices. Estimates given for general repairs.—Apply to C. PELLATT, 7, Somerset-road, Edgware-road.

IMITATION of WOODS and MARBLES.—A grainer of established name is willing to TEACH the above art, or portions of it, to a few adult pupils, by a course of ten or more lessons of evening lessons, to be entered on immediately. The advertiser having a little time to spare before the summer trade commences, is desirous to avail himself of the opportunity for pupils. Address, B. P., 3, Johnstone-terrace, Pimlico.

Particulars apply to Messrs. HENMAN and BARLANDS, No. 1, Bernard-street, Russell-square, W.C.

THE PHOTOGRAPHIC SOCIETY'S THIRD ANNUAL EXHIBITION will OPEN to the public, at Pall-mall East, on MONDAY, the 11th of FEBRUARY, from Ten o'clock in the Morning until Five in the Evening. Admission, 1s. Catalogue, 6d.

FINE-ART INSTRUCTION.—Practical Lectures for Ladies only.—THIS DAY, at TWELVE o'clock, Mr. GEORGE SCHARF, Jun. F.S.A. F.R.S.L. will commence a COURSE of SEVEN LECTURES on the History of MEDIÆVAL ART, &c. &c. &c. Subject:—Painting, Sculpture, Enamels, Illuminated Books, Printing, &c. ILLUSTRATIONS, Examples, and Specimens. Saturday Morning Lectures, at Twelve o'clock, to commence on the 16th inst. Tickets, One Guinea each Course, to be had at 26, Conduit-street, Regent-square. Messrs. COLNAGHI, Pall-mall East; Messrs. WINSOR and NEWTON, Rathbone-place; Messrs. GEORGE and NEWTON, 51, Rupert-street, Haymarket; Messrs. BELL and DALDY, Fleet-street, Knightsbridge; and Messrs. BELL and DALDY, Fleet-street.

FINE-ART INSTRUCTION.—Practical Lectures on Fine-Art for Ladies only.—Mr. GEORGE SCHARF, Jun. F.S.A. F.R.S.L. will commence a COURSE of TEN LECTURES on PAINTING and DECORATIVE ART, on TUESDAY next, the 12th inst., at TWELVE o'clock. These Lectures will be continued every Thursday and Tuesday at the same hour, and will be completed on Tuesday, the 26th of FEBRUARY, at TWELVE o'clock. These Lectures will be illustrated by Examples, Specimens, and Diagrams. Tickets, Two Guineas each Course, to be had of Mr. SCHARF, 1, Torrington-square; Messrs. COLNAGHI, Pall-mall East; Messrs. WINSOR and NEWTON, Rathbone-place; Westerton's Library, St. George's-place, Knightsbridge; and Messrs. BELL and DALDY, Fleet-street.

Imperial 8vo. 2l. 2s.

ARCHITECTURAL STUDIES IN FRANCE.

By the Rev. J. L. PETIT.

WITH TWO HUNDRED AND FORTY ILLUSTRATIONS FROM DRAWINGS BY P. H. DELAMOTTE AND BY THE AUTHOR.

BELL and DALDY, 186, Fleet-street.

CRYSTAL PALACE MUSEUM of NAVAL ARCHITECTURE.—To SHIP-OWNERS, SHIPBUILDERS, ENGINEERS, STEAM-NAVIGATION COMPANIES, and OTHERS. The Directors of the Crystal Palace Company intend to form in the Palace a MUSEUM of NAVAL ARCHITECTURE, on an extensive and classified plan, exhibiting the progress of the art from an early period to the present day, with specimens of the most recent improvements, respectfully invite all parties having the means to assist them in this object by contributing for exhibition MODELS of SHIPS, BOATS, MARINE ENGINES, &c. A detailed plan of the proposed museum (for which a considerable number of models has been already collected) may be obtained from the Secretary, to whom all communications should be addressed.—By order.

C. GROVE, Secretary.

Crystal Palace, February 1, 1856.

CRYSTAL PALACE.—EXHIBITORS' DEPARTMENT. The Directors, having made arrangements with many of the principal Exhibitors in the Paris Exhibition for the re-assembling of their goods in Sydenham, are desirous of making similar arrangements with the Manufacturers of the United Kingdom generally. They are therefore PREPARED to GRANT SPACE for the EXHIBITION of SPECIMENS of MANUFACTURE, at a nominal rent, for one year, from the 1st of MAY next. Every facility will be given for taking orders and making sales from private boxes. Delivery of goods will be permitted in this department of the Palace. Manufacturers and others at present exhibiting in the non-selling division are informed that, on the expiration of their present tenancy, they will be allowed to occupy space at a nominal rent, until the 30th April ensuing. Parties wishing to avail themselves of the above arrangements must apply to the Superintendent of the Exhibitors' Department at the Crystal Palace, for forms of application, which must be returned before the 1st of MARCH next. The Directors reserve to themselves a right of selection in respect of such of such space may be applied for.—By order,

C. GROVE, Secretary.

Crystal Palace, Feb. 2, 1856.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, begs the most respectfully to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found much lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be forwarded by return of post.

N.B. A few New and Second-hand Levels and Theodolites also on Sale.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS (Perspective, Interior, Isometrical Perspective, &c.); outlines of same neatly coloured, with backgrounds, &c.; Architectural Designs, Sections, Details, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, Rate, No. place.

QUANTITIES.—EVENING INSTRUCTION required by two Gentlemen in the practice of TAKING OUT QUANTITIES. They would go to the surveyor's office, state terms, &c. to F. C. 23, Everett-street, Russell-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—W. TIDMAS, Member of the New Society of Painters in Water Colours, and author of "The Picture Gallery of Pall-mall," "Rembrandt's Etchings," &c. &c. &c. Architectural Drawings, Landscapes, Perspective Views, Interiors, Room Decorations, &c. &c. Pupils received. Terms, &c. on application. Mr. T. is fully aware of the points essentially requisite in a pleasant and elegant drawing, and can guarantee his drawings to be executed in a superior manner. Address Mr. TIDMAS, 4, Adam-street, Adelphi.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Classes Established by Messrs. DAVIES, SMITH, and LEWIS, Architects, Civil Engineers, and Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, and Surveyors' Offices, and for the Royal Engineers Institution. Pupils in Architectural Construction, Mensuration, Land and Water Surveying, Levelling, Plan Drawing, and Working Drawings, Isometrical Drawing, Model Drawing, Mechanical Drawing, Masonry, Bricklaying, Carpentry, Joinery, Building Construction, Practical Geometry, Perspective, Shading, Colouring, Architectural Modelling, &c. &c. Terms—Day Pupils Three Guineas per Quarter; Evening Pupils One Guinea per Month. Private Instruction, Day or Evening, on the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Classes, 31, Russell-square.

DRAWING, &c.—One Guinea per Quarter. Lessons in Architectural, Engineering, Perspective, and Water-colour Drawing. Taking out Quantities; Measuring Brickwork, &c. &c. Gentlemen's Residences carefully measured and drawn. Terms and particulars may be had on application to Mr. SMITH or Mr. LEWIS.—Offices, 24, Guildford-street.

DRAWING CLASSES.—24, Guildford-St. Russell-square.—At this Establishment Pupils are thoroughly instructed in Architectural, Engineering, and Mechanical Drawing, Modelling, Perspective, and Water-colour Painting. Taking out Quantities, Measuring Brickwork, &c. Terms, One Guinea per Quarter. Prospectuses and full particulars may be had at the Offices.

GEOLOGY.—PROFESSOR RAMSAY, F.R.S. will commence a COURSE of THREE LECTURES on GEOLOGY, at the ROYAL INSTITUTION, at the Hour of Three o'clock, to be continued on the succeeding Tuesday, Thursday, and Tuesday, at the same hour. Fee for the course, 3l. MINERALOGY.—WARINGTON W. SMYTH, M.D. will commence a COURSE of FIFTEEN LECTURES on MINERALOGY, on WEDNESDAY next, at Three o'clock, to be continued on each succeeding Friday, Monday, and Wednesday, at the same hour. Fee for the course, 3l. Tickets may be had at the Royal Institution; and of Messrs. Jennings, 26, Ludgate-hill, where further particulars may be had.

NOTICE.—The Museum of Practical Geology is now open gratuitously to Students every day, except Saturday, from 10 to 4.

By order, TREASURY, BELLS, Secretary.

Eighth Edition, Now ready, price 6s.

The Builder.

VOL. XIV.—No. 679.

ARRIVING at the next important class of works of which designs or drawings are in the Architectural Exhibition, we have the circumstances of actual taste even more directly presented to us than before. Believing that—however useful the comprehensive study—the concurrent *practice* of different styles is unfavourable to perception of the real *art* by the public, we cannot say that the efforts in the department we are about to speak of, taken together, are quite satisfactory in their present tendency, and their relation to the expected future in architecture. There are certainly some of the exhibitors who show, more and more, the desire to make for themselves a style, and to keep to that only; and such efforts deserve commendation. Such cases are, however, exceptional; and, as it need hardly be said, many adopt indifferently, either of the styles or several. We conceive this system to be disadvantageous, even to the architect, be he ever so accomplished.

It has been said that the first principles of all styles would be found the same; but it is clear that the degree of prominence allowed to particular principles, and the class of resulting forms are ever varying: else, what is there to make the discrepancies, or, in short, the styles? The question then is, can the eye that has acquired preference, from familiarity, in one particular direction, regard another class of forms without depreciating the real merit which there may be in them. Can the ordinary, or even the professional observer, shift the gear of his ideas at every building that he approaches, so as to do full justice to the *art* in all? It is clearly important that no such impediment should be raised to the perception of *art* by the public.——If the desire of novelty be otherwise the predominant feeling, is not mere change of style mistaken for the only legitimate novelty,—the infusion of fresh *art?* Neither the art nor the novelty is gained by changes of style: novelty being a necessary element in art, though not all that is required.

In these respects the public and the profession stand, we say, much in the same position. Looking to the latter, can any one doubt that one style for an architect to work upon, is enough for a life-time; or that, whatever may seem the art-results in the case of some individuals, the works of these would have claimed a rank even higher than they do, had a different course been pursued? We presume it is not now necessary to show on the one hand, that little will be effected without the study of existing models, if only as a starting point, or on the other, that to work in, what is often called, "the spirit of" an old style, is not the precise course which should be observed. We know that an opinion is held that the decline of art was in some degree connected with the manifestation of individuality of taste amongst architects,—that is to say, that in the best periods of art, the individual architects had no fame, whilst in the later periods the opposite is to be noticed. Such a view—which we believe we have correctly stated—is scarcely to be accepted. It seems to us to ignore the effects of the invention of printing, and the circumstances of the later period in regard to attention newly paid to art-history—as shown by the works of Vasari and others,—whilst it also gives too little importance to the fact that the names of many of the chief architects of the earlier periods *have* come down to us, even under difficulties in the way of preserving records. The chief reason of *the decline of art*, as it is called, so far as it followed "the revival," must, it seems to us, be looked for in a somewhat different direction; and this inquiry we have before now, tried to aid. We do, indeed, believe that in a healthful state of art, the mind of the individual artist would always be found to mould the character of his work; and it is because we believe that this individuality is *lost* under the present system, that we counsel reformation. It results naturally from the pursuit of several styles, that to be incorrect in the patterns of them is more dreaded than is the lack of invention. We say it is a great error not to study and understand the several styles; but it is a greater error to allow them to become the "fetters of genius." It seems opposed to all that we know of the operations and capacity of the mind, to expect great results from efforts which, being numerous, are dissimilar and excursive. In educating, and in gathering the material of art, the area taken must be wide and omnifarious; but, in application of the products, the aim must be direct and concentrated. We say, then, that one style only should be developed or fashioned by architects; and that any others should be used only as feeders to its art. It is of less importance what such style should be, than that there should exist, *to a certain extent*, unison of ideas. It is the very point we would advance, that this would render possible and conduce to, instead of repressing, originality. The public would appreciate *art*, and would not mistake the substitute for the work of invention. Though, for a time, several systems might continue to prevail, we believe that very soon indeed, the daily increasing interchange of ideas amongst architects would complete the fusion of opinions, of which already, even amidst opposition of language, there are indications.

Were it necessary for us to point to any style practised, as one which would most claim to be worked on, it is clear we should desire to choose one which would be already familiar to the largest number of persons.

The state of public taste is the main cause of the motley garniture of the domestic architecture which passes for that of the nineteenth century. The only fault of architects is, that they are too ready to follow the mere whims of employers; though we allow they can scarcely do otherwise. Your excellent John Bull has a great idea, that if he spends his own money, he may do what he likes with it. It is part of his prerogative to do so: and you, the architect, had better not whisper a doubt, or even a suggestion. What is it to him, if you, or a hundred others, are not pleased: the house is for *him;* and to please *himself* is his object? Now, here we come to the very touchstone of the question. A man has no right to present a disagreeable object to the sight of others; he has no right to offend the public eye, and vitiate the public taste, or even to wound the sensibility of that choice section whom Shakspeare calls "the judicious"—ever the true court of appeal—whose "censure" "must, in your allowance, o'erweigh a whole theatre of others." The outer surface of a man's house is *not* his property; but rather belongs to those who are compelled to see it from the public way. Neither is the inside of the house to be given up to individual caprice: it cannot be kept ever shrouded from all eyes but those of the original perpetrator. But, more than this, no man can be wanting in knowledge and love of art, without doing, *ipso facto*, a great amount of mischief,—by standing in the way of those benefits which the cultivation of the beautiful was intended by Nature to confer. Ignorance is criminal, because the results are not confined to the individual himself, but pass by infection to deteriorate masses of society. A man's house, in its architecture, is either an active *focus* of good influences, or it is powerfully the reverse: and could it be made amenable to legislative supervision, would as much merit attention as details merely structural or sanitary. The power of an individual architect in the right direction, often depends upon his possession of qualities which may be quite independent of his capacity as artist. Constantly is he regarded as a sort of superior clerk of the works. With the variety of styles which may be seen attempted within a short distance, every employer has just enough knowledge to impose one or other of them, as a condition. The architect does the best under the circumstances. People who expect a higher course from the artist, must again be reminded that those are not in a position to *protest*, who act as architects. Thus, of late years, each architect has either subsided into an instrument of the caprices of others, at least in the matter of style, or it has not occurred to him that there might be argument against the existing state of things,—finding which, he has accepted it as his own principle.

The effects of prescribing the decorative character of a design, and accommodating the uses of the building to such preconception,—in place of the proper course, namely, that of beginning upon the *plan*—though with an eye to decorative effect, manifest themselves in different ways. It may be sufficient that we should allude to some of these. For example, in the Exhibition, there are elevations of designs for street houses in the Gothic style, such as Nos. 54 and 157, by Mr. C. L. Eastlake, and Mr. C. J. West, which have been named, not without approbation, in some quarters. They are apparently students' drawings. As such, it is worthy of notice that they are only elevations. No. 54 displays some variety in details; but the error of the course taken, to which we have above referred, is very remarkable. Examine into the manner of lighting the different rooms, with reference to the absence of dark corners, and symmetry internally; and ask, how could the water be got away from the roofs; and the crudeness of the conception will be obvious. However you view the question of utilitarianism and art, is it not clear, that you never even arrive at the art-question, if the mechanical insufficiency of the design be obtruded on you at the outset? Moreover, it should be understood that an architectural design is simply nothing, unless it be the *locum tenens* of something which could be erected. Now, look at the trifling affair of rain-water pipes. The author of the design just mentioned, shows some of them, apparently because they can be made tributary to what is conceived to be picturesqueness. But, neither here, nor in nine out of ten designs that we could name, is the requisite provision made in this particular. Mr. E. B. Lamb has a design (129) for a "House to be erected in London." We suggest the application of the rain-water pipe test to *it*. Could the pipe which would seem to be required in the front, be brought down without cutting through the decorative masonry, or otherwise destroying the character of the design?——Mr. Edmeston's "House, Marine Parade, Eastbourne, plastered front" (334), appears to have the same defect. Doubtless, to get the water from the porch and one part of the roof, a pipe might be contrived in a chase in the wall, so as to be out of the way of the entrance,—though we have known leakage in such a case, to be attended with inconvenience. But how about the intersection of the eaves gutter by the dormer windows?——Nay, Mr. D. Brandon, too, who exhibits (86 and 87) "Sketch for the Mansion erected at Colesbourne, Gloucestershire," and "South View of the Manor House, Aylesbury, Bucks,"—the former a Tudor building in stone, with square tower, oriels, and a red-tiled roof; and the latter, a red brick and stone building in a

similar style, falls into somewhat the same error;—for, if the water might be taken down without intersecting windows and similar important features, the numerous pipes required could not but produce an effect which would be so far different to that shown in the drawing, that this should not have been (we must be pardoned for saying) falsified. We speak thus strongly, because it is this blinking at the exigencies of the structure which has brought architecture into the state in which it has lately been; and for which state the study of Gothic architecture is really that which offers, and will afford to us the antidote. Let, then, the committee consider whether a few clear suggestions to exhibitors might not next year be useful. They don't want to see impossible dwelling-houses, however sparkling with polychromy, or picked out with cuspidated tracery. Plans, therefore, if not appended to such drawings, should not be unconsidered; or the exhibitor of such works, having regard to the criticism which appears in some of the journals, will do harm rather than good. In the matter of "down-pipes," had we the framing of any *architectural commandments*, we would say, they should never be omitted. Neither, indeed, should any other thing be glossed over in a drawing, which will modify the effect of the building when erected.——Mr. Brandon also exhibits (43), a "South View of the Mansion, Fonthill-park, Wilts." The building is designed with Palladian enrichments, in three stories: and there is a tower and an arcaded porch.—— We have spoken of Mr. Edmeston's drawing (No. 334). In spite of the apparent defect which we have mentioned, it is a pleasing design. The bow window, generally required in a house such as this appears to be, with its verandah, is well treated, and colour is made to contribute to the design, in place of having overpowering prominence. Cement affords the means of preserving a house from damp, in an exposed situation; and it is here correctly used. The common error is not in the use of cement, but in making it in imitation of forms which are better fitted to, and have become associated with another material. It is remarkable, that Mr. C. Gray, in a letter in the *Times*,—which he wrote subsequently to the article in that journal lately, on architecture and constructive truth—should have fallen into the error of apparently condemning the use of cement on all occasions, and under all circumstances. For, he himself has, we think, employed the material, both correctly, with regard to structural truth, as well as physical properties, and with some amount of good taste. It appears to be used in parts of his designs for houses in the present exhibition. Of these, we find (162) "Tavistock Chambers," in course of erection in Southampton-street, Strand; (163) "Semi-detached Villas," erecting at Wood-green, at a cost of 550*l.* each; and (301) "Detached Villa, recently erected on Tulse-hill." These works certainly deserve commendation for invention in details: and in the use of the coloured materials of several different kinds, which is characteristic of his style, the architect has made a step,—his colours operating this year with diminished intensity. The attic windows in combination with the cornice—always difficult—are here cleverly managed. The treatment of the *forms* of decorative brickwork also is better in Mr. Gray's works, than it is in many recent attempts. Effect in the cornices is obtained by introducing small arches; and Mr. R. R. Rowe adopts a similar expedient in (304) "Vicar's-buildings, Cambridge: a model lodging-house for sixteen families, built of white and red brick, at a cost of 2,000*l.*" The drawing (431), "House and Workshops erected on Bishopshill, York," by Mr. G. F. Jones, is also an effective brick building. Bricks, set angle-wise, here form the principal vehicle of decoration. We may remark, that to produce good architecture either in terra-cotta, or with the ordinary forms of bricks, is by no means so easy as might be supposed by those who have not tried it. In the former material, in mouldings, the several pieces are liable to be distorted, from the firing; so that they do not preserve the regularity of line which is obtainable in masonry, and which is so essential to the effect of a cornice; whilst the ordinary forms of bricks can hardly be applied in the situation of cornice mouldings, without the impression of the limited scope of the material, and of the absence of due facilities for proportion in the several fillets or facias. The available projection is very small indeed, in consequence of the difficulty which there is at all external angles. The greatest attention throughout should be paid to "bond;" and it is hardly possible to succeed without fixing the place of every individual brick. Speaking of brickwork, Mr. R. Kerr's efforts deserve more particular attention than we were able to give them when noticing churches. He exhibits (232) "A Sketch, illustrative of the Construction of Ornamental Brickwork," as he says, "according to a system carried out of late years by the author," "the general principle" being "the introduction of bricks of the common size, and of certain simple mouldings and ornaments, thus producing an elaborate effect at a cost which is very insignificant." The particular design thus headed, shown in a large effective drawing, represents a long structure—a kind of summer kiosk—with piers and arches, and four square towers. The building stands in the centre of a stream, and the main floor is reached by steps at each end from the water. The requirements of utility and structure having sat very lightly upon the designer, the intractability of the material has not operated disadvantageously, and the building would have a fine effect. In the other works, however, as in (236) "Two Villas at Enfield, Middlesex, in Ornamental Brickwork," we cannot think that the same skill in overcoming the obstacles is shown. The absence of grace in profiles, and of proportion in the parts of mouldings, resulting from the difficulty in "bricks of the common size," is here observable. The pattern of balustrade chosen is open to question as suggesting comparison with what could be effected in stone; and the imitation of stone quoin and rustic work, though it has been generally adopted by others, appears to involve a similar error. There is a rule of general application in the treatment of materials which will apply to efforts after "ornamental brickwork,"—whether with the common forms of bricks, or otherwise. Distinctive character must be discovered in the material, and that expressed; or the use of the material will only offend—by suggesting inferiority.

The "House now erecting at Edgbaston, Birmingham," by Mr. J. C. Chamberlain, should be one of the noticeable works of the Exhibition, —for, elevations and two perspective views are considered necessary for its due appreciation. It certainly displays talent. Red, white, and blue bricks, dressings of Bath stone, encaustic tiles in window heads and string courses, are all employed; yet what—save the admiration of those who regard as excellent only forms assumed to be continental or Venetian—is gained by leaving the English Gothic? The case is exactly one of those to which our opening remarks will apply. We fear the assumed gain of novelty is attended with loss, even as regards structural truth. With all the design and fancy which there is in the continental Gothic; in some equally important points, we doubt whether it ever equalled our own style. The distinctive characteristics of the general style seem to us constantly departed from; and in the modern efforts by Heideloff, and even those by French architects, the structural errors are even more prominent.——Mr. Digweed's somewhat eccentric taste, shown in his "Designs for Parsonages, Villas, &c." (261, 306, and 529) may be pardoned; because there is some real design in those productions; and a similar remark might be hazarded of Mr. Dwyer's "Design for a Moulded and Vitrified Brick Mansion, with Terra Cotta Enrichments" (82). By the hand last referred to, are some good "Designs for Villas" (83), and a "Design for Lodges, Shotover House, Oxfordshire" (331), and in the Designs for "Park Gates, Stapleford" (144, 145, and 307), the wood and ironwork are excellent in effect, and highly suggestive for other combinations.——Mr. D. Burton's "Grove House, Regent's-park" (185), both as to design and drawing, carries its age well amongst the multitude of different manners that have grown up about it. Though Greek architecture may have gone out of date for villas, this design may be studied with advantage in the grouping of its external features, and in the plan which is here so well explained. Mr. Burton also exhibits some "Daguerreotypes" (490—495), of the house at Grimston, Yorkshire," and of the Palm-house at Kew (501 and 504). With the style of Grove House, that of the "Villa Residence for John Knipe, esq. Worcester" (193); which is brick and stone and half-timbered Gothic, by Mr. R. W. Armstrong, presents a singular contrast.——The house at Bumblekyte, Staffordshire, lately erected for the Rev. J. L. Petit, by Mr. T. Hill, is shown by a view (253), a partial section (254), and a sketch (250), by the owner, taken whilst it was in progress. Externally it is a building of one story, with a porch,—but crowned by a portion of the structure, in the position of a staircase lantern, having circular windows, and the chimneys grouped about it. The *ornament* externally is only what may be found in a brick cornice. The section of the staircase-hall is not clear as to the use of the arches which are comprised in the height of the lean-to roof,—for, they are shown enclosed by curtains; and it would appear that there are no upper rooms, nor even a passage-way round on the corresponding level. The interior, however, belongs to a lover of art; as equally manifestly, does the exterior stand forth as that of Mr. Petit's own house.—— An "Elevation of a Mansion—a study" (270), is profusely covered with enrichments, some of which are highly original, and others not deficient in merit. Again, however, we are troubled with a structural question. In this design, how is the attic story (for, judging from the height, there must be one) lighted?——Other designs in the Italian style, we may say have considerable merit, as for example (368), a "Design for a Mansion," by Mr. D. Ruddle. The coins on the piers at the angles, however, for the sake of breadth, should not have been introduced.—— The "View on the Banks of the Mersey" (371), by W. Scott, shows a row of houses with good Venetian windows; and "Lingdale House, Cheshire" (422), by the same hand, is still better, both in general grouping and in originality of detail.——Mr. G. Morgan exhibits a general view and elevation of the houses proposed, or commenced, on the estate called the "The Cedars," at Putney (391—392 and 434). ——Messrs. Wetten and Harris's "Design for a Suburban Villa" (393), is described as a new application of ordinary materials, being an attempt to combine utility and beauty. Though the design—of Gothic character—has merit, the particular intention is not very obvious; and the exposure to the weather of trussed framing to the gable, is one of those devices which now might be fairly debated on.——There are still many designs left unnoticed, as those by Mr. J. Woodman, Mr. E. Scott, Mr. W. Young, Mr. H. J. Stevens (Osmaston Manor, Derbyshire), (540 to 542), Mr. Hellyer, and others. Why, in the lodge near Pontefract (27), does the architect of this otherwise good design (Mr. G. H. Jones), corbel out a bay window which is on the *ground* story?——In Messrs. Ashpitel & Whichcord's large drawing, the houses are the best of the designs there shown; and Mr. J. Wylson's "Scoto-Parisian Dwellings for the Middle Classes" (439), besides a good plain elevation, has features of plan which merit observation.

We have said nothing about the designs for internal decorations, and the specimens of work which are exhibited, except generally. We should however, find as much matter for comment here, as in any branch of the Exhibition.

Landlord and Tenant.—Recovery of Possession through Breach.—In the Court of Queen's Bench, on the 5th inst. an action was tried, Long *v.* Lewis, which was brought to recover possession of eighteen small tenements, situated in Spring-gardens, parish of St. Dunstan's, Stepney. The plaintiff, Mr. Jeremiah Long, is a surveyor, and the defendant is a house-agent. The houses were let to the defendant in 1852, and had gone so generally out of repair, that the plaintiff deemed it advisable to bring the present action to recover possession of them. Mr. Cooke Evans, who appeared for the plaintiff, having elicited these facts, Mr. Hawkins, for the defendant, admitted that he could not struggle against such evidence; and the jury, therefore, found a verdict for the plaintiff.

ON THE APPLICATION OF PAINTED GLASS IN ARCHITECTURE.*

THERE is no subject, perhaps, which has occasioned greater differences of opinion than the principle upon which glass paintings should be formed. Some think that we ought to content ourselves with producing copies of ancient work: others, on the contrary, maintain that we ought to endeavour simply to carry out the rules adopted by the old glass painters, without imitating their defects; and amongst these, there is much controversy as to the extent to which ancient precedents should be modified or departed from.

But I believe there is little or no difference of opinion as to the unsatisfactory character in general, of the works actually produced. Even the *Ecclesiologist* newspaper, which I am always proud to quote, when it speaks the truth, has made the discovery, how completely the peculiar sort of glass painting with which it is conversant, and which it has taken such pains to extol, has stood still, for at least the interval between the Hyde-park and the Paris exhibitions. The cause to which this is attributable is evident, and must, so long as it unhappily exists, frustrate any endeavour, however well meant or well devised, for the improvement of glass painting. I allude to the incapacity of those persons to whom, in general, we entrust the execution of our painted windows. With less than half-a-dozen exceptions they are but glaziers, having picked up a small smattering of drawing at the schools of design, or else architects' clerks, as little conversant as they, with figure drawing. The competition amongst these men, and their attempts to undersell one another, are so great, as totally to preclude all study. Cheap production is the one thing aimed at. The consequence is, that we do not see in England, as we do in France, even decent copies of old glass, but only a wretched style of representation, the result of people attempting to design before they have learnt to draw; in comparison with which the sight of a really accurate copy of old glass would be a positive relief, since that, at all events, would display some little art, such, indeed, as was possessed by the ancient artist. Any candid observer must have perceived that, in the Exhibition in Hyde-park, the English glass painters were beaten hollow by foreigners, in every respect, whether in those works whose only merit consisted in their conformity with mediæval drawing, or in those of higher pretensions. And we can hardly complain if foreign artists regarded the subsequent distribution of medals and certificates, as a mode of blustering through a scrape which, otherwise, might have proved fatal to the reputation of the most prominent of our professed mediævalists. Since then, notwithstanding the enormous sums which we have expended within the last twenty years, more than equal, I believe, to the contemporaneous expenditure of the whole continent, we can boast scarcely of more than one window—I question really if more than two could be named—which, in point of art, would bear a comparison with the modern windows at Munich or Cologne. Now, for all this, it is we, the patrons of the art, and not those who practise it, who are to blame. The glass-painters are not wrong in supplying an article suited to the market; but we are wrong for not acting up to our professions. We decorate our churches, and pretend to say that the offering should be made in no niggard spirit, and yet place in them works so vile as would ensure their immediate expulsion from any private dwelling. It must be admitted, however, in excuse of the great body of donors of painted windows, that they are, perhaps without being aware of it, under the leadership of men to whom the associations connected with the Middle Ages are as everything, and who care not for art, so long as they possess something that will remind them of the Middle Ages. Ignorant of what mediæval art really is—else they could hardly look so complacently on its caricature—and more mediæval in their feelings and tastes than those who lived in the Middle Ages, these are the men who, whilst talking of art (to save appearances), do all in their power to drive artists from the field, lest, peradventure, church windows should become—to use their own phrase—"too Raffaellesque," and exhibit the paganism of grace and beauty.

It is high time, however, that these blind guides should be left to fall into the ditch by themselves. Mediæval art may not be high art, but if we intend not to fall below it, it can be done only by employing artists upon all windows consisting wholly or in part of pictures, leaving the pattern-work, if we please, to the glaziers and their assistant draughtsmen;—and by an artist I do not mean a person who has barely learnt the simpler proportions of the human figure, and can just make shift, without any enormous blunder, to make a spiritless or caricatured copy of a print from Fra. Angelico or Steinle,—but a man, in short, whom artists of character and reputation would themselves call an artist.

It will facilitate my argument if I give a slight sketch of the nature, rise, and progress of glass painting. I must, however, crave your indulgence for many little inaccuracies into which I may fall here, and elsewhere in this paper, from a desire to be brief.

Although the art of glass painting is comparatively recent, the art of making, and, indeed, colouring glass, is of such high antiquity that its origin is unknown. The Egyptians were familiar with it; and it was brought to perfection by the Greeks and Romans,—to the latter of whom the discovery of window glass is due. Every colour that we see in mediæval work was known to the Greeks; and though the moderns may have emulated the skill of antiquity in the formation of glass ornaments, the colouring of the ancients remains unrivalled. There is no glass that I have seen, the colours of which, in point of richness and harmony, will compare with those of the ancient Greeks; and we may well be astonished at the achievements in this, as in other arts, of that wonderful and highly gifted people.

Glass once having been made into sheets, its employment in windows would naturally follow. A bronze frame has even been found at Pompeii, which, it is supposed, served the purpose of a lattice. But the windows of St. Sophia, at Constantinople, remain, as proofs of the manner in which, at first, large apertures were closed with glass. The window is divided into little squares by a pierced stone panelling, each panel being furnished with a rabbet for the retention of the glass. That coloured glass, as well as white, was used in these windows, depends on the testimony of contemporaneous writers: and it is easy to conceive the effect of a stiff pattern composed of little squares, of rich transparent colour, set in an opaque frame. The nature of the pattern might be advantageously varied, and rendered more tasteful, by imparting a less severe form to the framework,—as we see in some of the Eastern mosques, where the windows are filled with what, for want of a better word, I may call stencilled patterns, in plaster, —of various design,—the openings of which are stopped with bits of white and coloured glass, stuck on at the back of the plaster framework. The transition from this to the glazing, with which we are familiar—composed of leadwork and glass—would be easy. And many specimens, and even entire windows, remain, where the form of the pattern is given by the leadwork only, the colouring being done with pieces of white and coloured glass. The next step was to heighten the effect produced by such simple means, by painting upon the glass with an opaque enamel colour, which was attached to the glass by the action of a furnace. And in this short sentence I have described to you what painted glass is. At first the process was literally what I have described: a good part of the design continued to be made out with the leadwork, and the more delicate work was painted upon the glass with the enamel colour. I am unable to say when the discovery of glass painting was made; for there is a question amongst antiquaries whether the "Treatise of Theophilus," in which the process is minutely described, was written in the tenth or twelfth century. However, I have myself seen remains of painted glass as early as the first half of the twelfth century, and it is possible that in France, where I believe the practice of the art commenced, some earlier specimens may yet be discovered.

The same mode of procedure continued until the middle of the sixteenth century, with but very trifling additions; the most important of which was the art of staining glass yellow, with a preparation of silver, which was discovered at the beginning of the fourteenth century. And the surprising contrast between the stiff mosaic of the twelfth century and the glass picture of the sixteenth, is wholly owing to differences in the design, in the nature of the glass itself, and in the handling of the opaque enamel colour. A further discovery, made a little before the middle of the sixteenth century, was destined, in course of time, to work a great, and as I think prejudicial, change in the art. The facility with which the opaque enamel, "the enamel brown," as it is called, was applied, led to the belief that transparent colour might, in like manner, be affixed to glass, by mixing the proper colouring material with flux or enamel, and burning it in. And soon the glass-painter was possessed of a palette almost as well furnished with different tints as that of his brother painters in oil. The use of enamel colours was prejudicial, not merely in diminishing the brilliancy and power of the work, but more particularly from its tendency to make the artist lose sight of the peculiar characteristics of the material on which he had to work, and to treat glass rather as canvass than glass. The last windows of importance that were painted before the general introduction of enamel colouring, are the windows of the chapel of the Miraculous Sacrament, in Brussels Cathedral, as well as the two transept windows, all which were executed within three or four years of 1550. It is impossible to look at these windows without perceiving how thoroughly their author understood the nature of his material. These works are quite different from oil paintings, frescoes, or mosaics. They are emphatically glass paintings, of a high and rare order, uniting such brilliancy and power of colour as are the natural attributes of glass, with a degree of pictorial effect which augurs well for the future of glass painting; if its principles are only honestly carried out in an artistic spirit. It is true that some of our glaziers have despised these magnificent works; but they may depend on it that, if by some astonishing miracle they shall themselves be enabled to paint glass as badly, they will make their fortunes. In almost all the subsequent glass paintings, we see more or less the mark of the beast, in the confounding of the principle proper to painting on an opaque surface with that proper to painting upon a transparent material. Sometimes, as at Gouda Church, in Holland, the chief fault is, in the dulling down of the whole picture to a level with the enamel-coloured glass used in it; sometimes, as in the windows on the south side of Brussels Cathedral, the windows—said to have been designed by Rubens's scholars—there is the additional mistake of selecting a design which cannot be adequately expressed in glass. The Modern Munich school is open to the imputation of both faults, to the first especially: and several of the windows of the Maria Hilf Church, at Munich, excite one's regret that so much truly admirable art had not been expended on a material more suited to its style, such as fresco or canvass. I am so persuaded of the superior fitness of the earlier method of glass painting which prevailed up to 1550, that in the course of the following remarks I wish to be understood as advocating that system exclusively.

In the application of painted glass to architecture, much of the difficulty with which the subject is beset would vanish, if all the buildings intended to be so decorated were of one character, or belonged to one style of architecture only: as it is, we ought, by rights, to consider the principles which should guide us in selecting glass paintings fit for buildings possessing every variety of character, and erected in every conceivable style of architecture. But as so wide a range is not within the compass of a paper like the present, I will confine my observations to ecclesiastical edifices in the Gothic and Classic styles.

With regard to Gothic buildings the thought naturally occurs, that the painted glass which

* The following essay, by Mr. Charles Winston, was read at the Architectural Exhibition on the 29th ult.

was used contemporaneously with the architecture, must be that most likely to harmonise with it. But this, I apprehend, is true only to a certain extent. It would be paying a poor compliment to Gothic architecture, to maintain that nothing better than the drawing and composition such as we see in mediæval windows, would harmonise with it. It is the magnificent colouring of ancient glass which constitutes its redeeming feature; and it seems most in accordance with modern notions, that the colouring of a picture should not be its only excellence. The difficulty is to strike out the path of reformation.

I have often looked at an old window and a modern one together, from a distance too great for anything else to be distinguished, except the general effect of the colouring, and have wondered why it was, that the old window seemed most in keeping with the place—waiving for a moment the superiority of its colouring. And I may well express my astonishment, that any person's eyes should be so dull and insensible to colour, as to mistake an ordinary modern window for an ancient one. It is true, that, on a near view,—as at the Sainte-Chapelle, at Paris,—artificial dirt and scumbling, most cleverly applied, may disguise to some extent the flimsiness and crudeness of the modern material; but it is impossible, by any trick of this sort, to make two things, which are so different in their chemical constituents as ordinary new glass and old, look alike. If there could be any doubt on the subject it would only be necessary to retire to a sufficient distance, as from the restored windows in the apsidal chapels at Bourges, to have it dispelled.

After a good deal of consideration I have come to the conclusion, which I dare say some of you will have anticipated, that the rich, cool, quiet tone of old glass, being favourable to repose, has a peculiar grave and solemn character, which harmonises with a Gothic interior. And that this gravity is more perceptible in the earlier than the later glass paintings, the colouring of which is neither so deep, nor so quiet as that of the earlier ones; and which again is associated with a less grave or severe style of architecture.

Thus we find Early English architecture associated with the glass of the twelfth and thirteenth centuries, which is the richest and deepest tinted window-glass in existence. I am not speaking of the coloured glass merely, but of the white also, the tint of which, though sometimes looking quite white by contrast, is really a rich sea-green. Again we find Decorated architecture associated with glass, differing indeed but little from that of the former period, except in the quality of certain colours. Of the blue, especially which, in the twelfth century, was a perfect sapphire, so closely resembling the old Greek blue glass as to corroborate Theophilus's statement that it was made out of antique mosaic work,—the colour deteriorating in proportion, I suppose, as the original supply failed; but all which glass is employed in designs of a less severe character than those of the twelfth and thirteenth centuries. So, again, we find the Perpendicular architecture of the fifteenth century associated with glass much lighter in tint, and that of the sixteenth century, with glass of a gayer and warmer tone, than any which had preceded it.

If, then, we accede to the proposition that in their general appearance there is a certain degree of harmony between ancient glass paintings and the contemporaneous architecture (and which has been shown to arise in great measure from their colouring), a proposition which I hardly think can be considered fanciful, we shall have established the first step of a system which I think is capable of being worked out satisfactorily and [illegible]

Surveyors to Boards of Works under New Act.—The Holborn Board of Works have elected Mr. Lewis H. Isaacs their surveyor. The salary is 250*l.* per annum. There were forty-five candidates, we are told. The Lea District Board have elected Mr. Francis E. Thorne.

* To be continued

THE LATE MR. CUBITT.

As an addition to the memoir we gave of the late Mr. Thos. Cubitt, the following particulars of some of his undertakings, from the pen of one who was acquainted with him for more than forty-six years, will interest many of our readers.

Mr. Cubitt's first work, of any extent, was the new roofing of the Russell Institution, in Great Coram-street, under the superintendence of the late Mr. John Shaw, then architect to Christ's Hospital, London. Although Mr. William Wilkins had previously reported on the safety and good condition of the building, it was found, by a more scrupulous architect, that the roof was not only in bad condition, but formed of improper materials, and unfitted for reparation: new works were therefore ordered, which proceeded with rapidity, and were finished to the entire satisfaction of the architect and the committee of the society. Soon afterwards the new London Institution advertised for tenders for its proposed building in Finsbury-circus, when Mr. Cubitt's was accepted. The foundation was laid in May, 1815, and, with a promptness and daring which marked Mr. Cubitt's character in all future works, he immediately purchased a piece of ground on the east side of Gray's-inn-road, commenced a series of workshops, purchased horses, carts, and materials, and engaged gangs of carpenters, smiths, plumbers, glaziers, painters, bricklayers, &c. with foremen to each class. This bold and hazardous plan was then a novelty in London, and consequently provoked much speculation. Bound, under a penalty, to complete the new building by a given time, Mr. Cubitt found that he was at the mercy of each class of tradesmen if his work was not finished by the time stipulated. By having workmen on his own premises and subjected to the laws and system of the place, he felt some security as to time. He was also enabled to go to the best markets for materials. His first stipulation with his employers was to have regular and speedy payments for works as they progressed, and he pursued this system in all future engagements, even to the works at Osborne and Buckingham palaces.

Shortly after the commencement of the London Institution, he found a harassing and expensive obstacle to surmount—insecure and bad ground for the foundation. Digging, and carting away a vast mass of materials, with deep piling and concrete, were found to be necessary: this occasioned much delay as well as expense, and was not calculated on in the first estimates. As he proceeded he found that working drawings had not been prepared by the architect when wanted, whence carpenters and other workmen were kept out of employ, and the builder most seriously annoyed and injured. Having finished his first large edifice in Moorfields, and obtained the desired credit of the Managing Committee, and from City companies, he took an eligible piece of ground at Highbury, in the parish of Islington. There he erected some moderately-sized villas, with large gardens, and on commanding sites. These were eligibly sold and let, when he directed his attention to another piece of land between Newington-green and the principal street of the parish, which had been occupied as market gardens and grazing fields. At this place he found it necessary to purchase premises on the north side of the Green, and also a tract of land to make a road of approach to the proposed new buildings. Here he soon raised detached villas and rows of houses, which, like the former, were speedily disposed of.

A piece of ground, of 6 acres, abutting on the upper, or the north road Islington, used as a nursery garden and for grazing, called Barnsbury, next attracted his attention, and here he began in 1825. Purchasing this, and making it freehold, he laid it out for streets and a square, and let the same to builders on leases for long terms. Besides a few houses he built as samples, all the remainder, to the amount of ninety-three, have been raised by other speculators, and are all on a small scale. The Church Missionary Society purchased a part of this ground to attach to their college.

About the year 1820, Mr. Cubitt commenced building a row of nine houses, to occupy the south side of Tavistock-square, in the parish of St. Pancras, for Benjamin Oakley, Esq. who had purchased and occupied a detached house in the vicinity. Though superior to the other houses which had been previously raised in that neighbourhood, they are not equal to Mr. Cubitt's usual works, for the proprietor was too economical in his outlay. They were intended as legacies to his daughters, and were first let at 150*l.* per house. This place being contiguous to the builders' workshops, timber, and masons' yards, induced the enterprising builder to take a tract of ground on ninety-nine years' lease belonging to the Duke of Bedford and to the Earl of Southampton, comprehending an eligible and healthy site. Here he successively built the houses of Upper Woburn-place and Woburn-buildings, Gordon-square, Tavistock, Endsleigh, and Gordon streets, also Gordon-square, with part of the south side of that of Euston. Some of these are let at from 210*l.* to 150*l.* per annum each. This tract, however, is not wholly yet covered, as the class of inhabitants for whom these houses were intended have (following the tide of fashion) migrated more to the west, where the numerous new and splendid houses facing Hyde-park and its immediate neighbourhood have sprung up. Perceiving the disposition of the fashionable world to follow in the wake of royalty, Mr. Cubitt fixed on a tract of land for building speculations at the nearest place he could find unoccupied in the immediate vicinity of the royal palace, and entered into engagements with the Marquis of Westminster in 1824 for 140 acres of land. In 1829 the writer of this notice made the following remarks on this district for "The Picture of London," then reprinting. "Within five years this land has been nearly covered with houses of the largest size, surrounding spacious squares, or on the sides of wide and handsome streets. Of all the extraordinary building works carried into effect by a London gentleman or tradesman we may fairly adduce this as unparalleled. Most of the houses surrounding one large square (Belgrave) have been erected, some of which are finished and occupied, and several others of nearly equal dimensions and value completed. When we consider the capital advanced for such hazardous speculations—the peculiar difficulties of the times—the immense augmentation of parochial and government taxes—with the employment they have given to thousands of merchants, manufacturers, tradesmen, artificers, and workmen, we cannot but admire the mind that projected and carried into effect so many novelties, and to such a large amount of expenditure." Did space permit, an essay of considerable extent and of no small degree of interest might be written illustrative of the moral courage, perseverance, and sound judgment of one man, who, single-handed, organised such a machine of personal, mechanical, and scientific power. On this occasion the writer can only suggest brief hints and intimations. In the second volume of "Public Edifices of London," are views of one side of Belgrave-square and a portion of Eaton-square, with short notices of the buildings then erected (1829), in progress, and as proposed to be executed.

About four miles S.W. of London-bridge is a large open piece of land, called Clapham-common, which has long been noted for mansions and villas, which have been progressively built and adapted for the residences of bankers, merchants, and other wealthy persons, whose offices, counting-houses, warehouses, &c. are within the closely-pent streets of the city. To the S.W. of this common were several fields, called Clapham-park, of about 250 acres, belonging to Atkins Bowyer, Esq. lord of the manor, who sold them to Mr. Cubitt, in 1824. Perceiving its capabilities, he immediately laid out the whole in lots for detached mansions and villas on a large scale, formed wide roads four miles in extent, and planted many thousand trees, which were intended for transplantation to plots of ground as houses arose. His next plan was to purchase houses and lands adjoining this property for the purpose of making wide and fine roads of approach to the new park. This effected, he commenced building large mansions, and invited the public to take sites for others. From that time to the

present works have been continued, and the whole ground is now nearly covered. It must be borne in mind, that these houses are praiseworthy from their intrinsic goodness of construction, as well as for their materials.

Besides the places and public and private buildings already referred to, there are several others, both in London and in the country, with which Mr. Cubitt's name is intimately associated The most remarkable of these is a plot of land on the river Medway, near Rochester, in Kent, on which he has expended full eighty thousand pounds for machinery, works, and plant, to make bricks and other objects of baked clay. The machines, tools, and processes of working are all of the most improved and expensive kind: the clay is of peculiarly fine and excellent quality; and the works had just been brought into the best condition, when its proprietor was arrested in his terrestrial career.

The extent of the preceding narrative admonishes the writer to close it rather abruptly, and before the whole be fully and clearly explained. To accomplish these works, sometimes with urgency and rapidity, at others with circumspection and apparent timidity, required unabated vigilance. Sometimes more than two thousand men were employed, all of whom were to be paid regularly every week; and to provide the necessary supplies, not only for this phalanx, but to pay clerks' salaries, and for the vast amount of material in machinery, for wear and tear, and in the buildings which were in daily progress, demanded ceaseless exertion for the working head. Money panics and workmen's strikes occasionally broke in upon and harassed the builder's mind, that was already upon the full stretch. His philosophy and courage, however, bore him up through the whole.

JOHN BRITTON.

THE ABBEY KITCHEN AT FONTEVRAULT.

HAD Mr. Scott been present when I read my paper at the Architectural Exhibition, he would hardly, I think, have taken the trouble of writing a letter to you, to convict me of inaccuracy in my notice of the building at Fontevrault. The report in your columns, being unaccompanied by illustrations, was necessarily imperfect. Those which I exhibited explained the plan and construction sufficiently, I hope, to prevent my hearers from carrying away any false impression. As to the use or destination of the building, I did not pretend to offer any opinion whatever. I had not happened to meet with the notice of it in Turner's "Domestic Architecture," or any other work; although I had no doubt so curious a specimen must have been amply described and figured. My knowledge was merely derived from personal observation, and not from what had been said or written by any one.

On referring to Turner, I observe that although he speaks of the building decidedly as a kitchen (and in all probability he is quite right), he adds that it is "commonly called the octagon chapel or tower of Evrault." I find, therefore, that in designating it as a chapel, I did no more than give it its usual title; and to show that I did not intend to assert positively that it was a chapel, I added, "if it be one, for I do not know that its purpose has been ascertained." At the time I wrote my remarks, I quite conceived the possibility of its having been a kitchen; and my recollection of the comparatively simple edifices at Glastonbury and Stanton Harcourt by no means altered my opinion as to the needless intricacy of its construction.*

I find also that the plan which I exhibited, and which I had worked out from the exceedingly rough and hasty sketch I was permitted to make on the spot, corresponds with Turner's carefully drawn plan more closely than I could have expected. Except that I have not noticed the substitution of blank wall for two of the apses, and have placed the door in a different compartment, the plans are nearly identical. I did not attempt to give the correct proportions; indeed, some I purposely exaggerated, for the sake of showing the construction more clearly.

As Mr. Scott admits, that the construction "has the effect of changing the direction of the sides of the octagon, and making the fire-places appear, externally, to be placed against its angles instead of its sides," I am not disposed to dispute whether I was strictly right or not in describing the building as an octagon with apses at its angles. The question is merely one of words, so long as I described the thing, which I hope I did, fairly. Externally, it certainly presents the aspect of an octagon with apses at its angles. To this external appearance I referred. It is true there is a certain bulging out in the lower part, which a simple octagonal tower, crowned, in the usual way, with an octagonal spire, would not necessarily have: this was fully expressed in my sketch of the exterior. The manner of combining this octagon (call it real or apparent, whichever you will, but it is the one which gives its form to the spire), with that to whose sides the apses or fire-places are attached, which combination Mr. Scott admits to be effected by a "somewhat intricate contrivance," is what I took some pains to explain by my sketches. And I still think that this contrivance, although not perhaps without purpose, was a more intricate one than the occasion required, or than was usual in an age generally remarkable for its architectural simplicity and purity.

I may here make another remark on the building in question, but without commentary, as the principle to which it refers would require much time and space for its full discussion. The intervals between the external apses are occupied by engaged shafts, which, both in Turner's finished engraving, and my rough sketch, differ from each other in no perceptible manner. Now, the internal shafts which correspond to these differ very much from each other, both in appearance and office; the one being low and strong, and used in support of a large arch; the other being tall and comparatively slender, and having little more to do than to mark an angle.

An instance of the octagonal plan, having the apse attached to each side, is given in the "Statistique Monumentale de la Charente,"—St. Michel d'Entraigues, near Angouléme. The church is now, I fear, restored, if not wholly rebuilt; so that I cannot tell what may be its present appearance; but I presume, from the description, that it must have had an octagonal roof, spire, or cupola, the faces of which, and not the edges, corresponded with the apses of the building; or it may have had a round dome on Byzantine pendentives: these would not have required any change to have been made in the original octagon. There can be no doubt of the soundness and security of this simple construction; nor can I conceive that the case is altered if the apses become fireplaces, surmounted by chimneys.

My object was to show an instance of what seemed to me unnecessary or misapplied ingenuity, and I preferred pointing out a very curious and unique mediæval specimen, even at the risk of some inaccuracy, instead of alluding to any modern example, with the certainty of giving personal offence.* J. L. PETIT.

P.S. I may be permitted to take this opportunity of saying how much I feel gratified by Mr. Fergusson's kind acknowledgment of my concurrence with him on all essential points. Had I seen the introductory chapter of his "Handbook of Architecture" before I read my paper, I should have modified such expressions as might seem to clash with his remarks; and this I could easily have done, without compromising in the slightest degree the object I had in view. As it is, I find I have said quite enough, in different parts of my paper, to prove that my expressed opinion was not opposed to his in any matter of importance. J. L. P.

CONSUMPTION OF SMOKE.—The Steam-Collier Association at Newcastle-on-Tyne are preparing a boiler to test the various designs sent in to compete for the 500*l.* prize offered by the association for the effectual consumption of smoke with a due regard to the economy of fuel.

* There is another building in the town of Fontevrault much more like the Glastonbury kitchen in design, and nearer to it in date. It is square, having square ones at the angles, and a vaulted roof of a very domical form, from the centre of which rises a slender octagonal turret. I find that I made a note on the spot, to the effect that the inside of this turret is not blackened, as by smoke, but worn as by a bell-rope.

* We have received a communication from Mr G. G. Scott, in reply to Mr. Petit's lecture generally: this will appear next week.

PROVINCIAL NEWS.

Spalding.—The Exchange building here is nearly finished.

Gringley.—The new National Schools at Gringley-on-the Hill were opened on Wednesday before last. The schools which have just been completed are situated to the west of the village, and consist of a boys' school, a girls' school, and a residence for the master. They were designed by Mr Henry Goddard, of Lincoln, and are in the Domestic English style. The walls are of red brickwork, and the angles are ornamented with buttresses having Ancaster stone weatherings. The windows have stone joints, mullions, sills, and heads, with relieving arches of brickwork over them. The roofs, which are of a high pitch, are covered with slate. The frontage is towards the south of the Retford-road, and is 62 feet in length. At the west end is the master's residence, having a projecting three-light window, and at the east end the boys' school, which stands slightly in advance. The girls' school is placed longitudinally in the centre, and at its junction with that of the boys there is a perforated gablet for a bell. The works were executed by Messrs. Bowes and Cobb, of Gringley; and the total cost, including fence and offices in the rear, will be about 600*l.*

Stamford.—In consequence, says the *Lincolnshire Chronicle*, of the deficient supply of gas in St. Martin's, the gas company have been at the expense of laying down new mains, with the view to afford a better light in that part of the town.——"By the decease of Mr. Robert Woolston," says the same paper, "the situation of surveyor to the Stamford Improvement Commissioners becomes vacant. A special meeting will be held on Tuesday evening next, for the purpose of electing Mr. Woolston's successor: the salary is 25*l.* per annum, with 5*l.* as inspector of fire brigade, the duties being combined. We hear that there are already four or five candidates for the office."

Northampton.—At the last quarterly meeting of the Lunatic Asylum directors, the committee appointed to superintend the making of bricks reported that they invited tenders for the manufacture of a million bricks of clay from the Asylum property, the work being done by labourers in the Asylum. Mr. Ireson tendered at 19s. per 1,000 bricks. In pursuance of a contract entered into with him, there were made and stocked, in 1854, 539,761 hard bricks, at 19s. per 1,000, and 10,000 soft bricks, at 14s.; for which 519*l.* 15s. 6d. was paid; and, in 1855, 467,560 hard and 26,542 soft bricks, for which 462*l.* 15s. was paid. An expenditure for laths, &c. for sheds, pantiles, ridge tiles, &c. made the total payment 994*l.* 11s. 4d. They had now 1,043,863 stocked on the Asylum premises, and the present value of the kilns, which were the property of the directors, was about 50*l.* It was believed enough bricks had been made for both the wings contemplated for additional accommodation: only one wing, however, being proposed to be done this year, the committee thought there was no necessity to go on any further.

Chelmsford.—The materials of the buildings on the site upon which the new Corn Exchange is to be erected were sold on Tuesday in last week, and brought a larger sum than anticipated, the coach-building workshop at the back (92 feet by 22 feet), producing 85*l.* and the total produce of the sale being 330*l.* The plans for the new erection have been finally agreed upon by the directors, and these, according to the local *Chronicle*, are to be open for public inspection, and steps taken forthwith to procure the necessary contracts.

Chatham.—Mr. A. Laurie has been promoted to be the chief engineer and inspector of machinery at the dockyard here, at a salary of 650*l.* per annum. The saw-mills and metal-mills are working day and night.

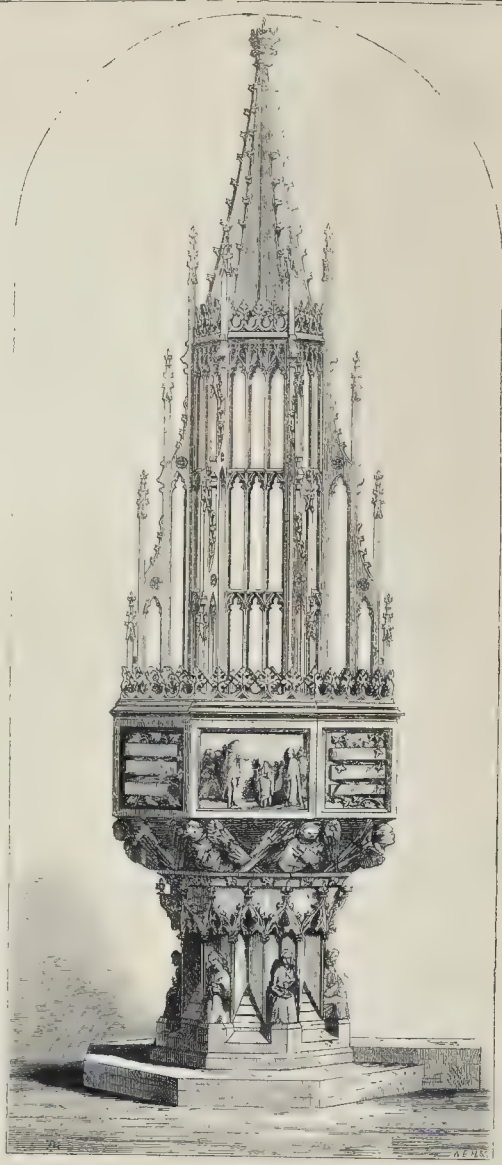
Oxford.—The front of Jesus College has been restored, or rather remodelled. The east-end of the chapel forms a portion of the elevation, the design for which was furnished by Mr. Buckler, architect. Its stone window has been restored, and ornamented with stained glass, executed by Mr. Hedgeland. The gateway of the college has become a prominent feature: the entrance is surmounted by a tower, with enriched para-

pet and battlements; and, as there is a staircase in the northern angle, advantage has been taken of it to carry up a square turret, which is also embattled, and forms the loftiest point of the building. There are many sculptures in this upper portion of the design. Over the moulded archway is a bay-window, with a roof of stone. The rest of the design, south of the gateway, has three tiers of plain windows, crowned with a parapet, surmounted by stacks of chimneys. Mr. James Long, jun. was the contractor for the masonry.

INQUIRY INTO CONDITION OF THE IRISH LUNATIC ASYLUMS.

To make additional provision for the care and treatment of the insane poor of Ireland, to the number of 2,500,—340,000*l.* have been spent by the Lords of the Treasury, to be repaid by the counties. The architects employed in the principal asylums were,—Belfast, Mr. Lanyon; Omagh, the late Mr. Farrell and Son; Sligo, Mr. W. Deane Butler; Mullingar, Mr. Mulvany; Ballinasloe, Mr. Kempster; Killarney, Sir Thos. Deane; Cork, Mr. Atkins; Kilkenny, the late Mr. Papworth; and Richmond, Mr. Murray.

Deputations from the different counties having made complaints that the outlay in some cases had been extravagant, a commission was appointed to inquire into the facts, consisting of Mr. T. L. Donaldson, architect; Mr. James Wilkes, medical officer of the Stafford County Lunatic Asylum; and Mr. Spencer Shelley, to act as secretary. The commissioners' report has recently been printed, and is now before us. Although courteously worded, and drawn up with an evident desire not to injure individuals, it is quite evident that the commissioners are far from satisfied in some cases with what has been done, and this is further shown by their recommendation that in the cases of Omagh, Kilkenny, and Richmond, various works should be done to make good defects without further charge to the ratepayers; that at Sligo the sum of 3,000*l.* should be deducted from the sum for which the ratepayers are liable, and various defects remedied without further cost to them; at Killarney the sum of 1,455*l.* and various works done; at Mullingar, 1,715*l.* remitted, and works done; and at Cork, the sum of 6,013*l.* remitted, and water-closets and ventilation made good, without further charge to the ratepayers. The penetration of the driving rains through the uncoursed rubble masonry, has led to a large expenditure. In some cases, the walls were found absolutely reeking with wet, producing rot in the timbers inserted in them. The ratepayers urge that the experience of the Board of Works derived from the like defects in workhouses and other buildings should have led them to insist on another mode of construction and extraordinary precautions to prevent the recurrence of so terrible an evil, which had baffled architects and builders of the highest repute. The commissioners are inclined to think that if a front mortar, such as Portland cement, had been used, to the depth of 3 or 4 inches during the work, and the joints had been at once struck, as in hydraulic constructions, it would have proved an effectual prevention to the admission of wet at the joints and beds.



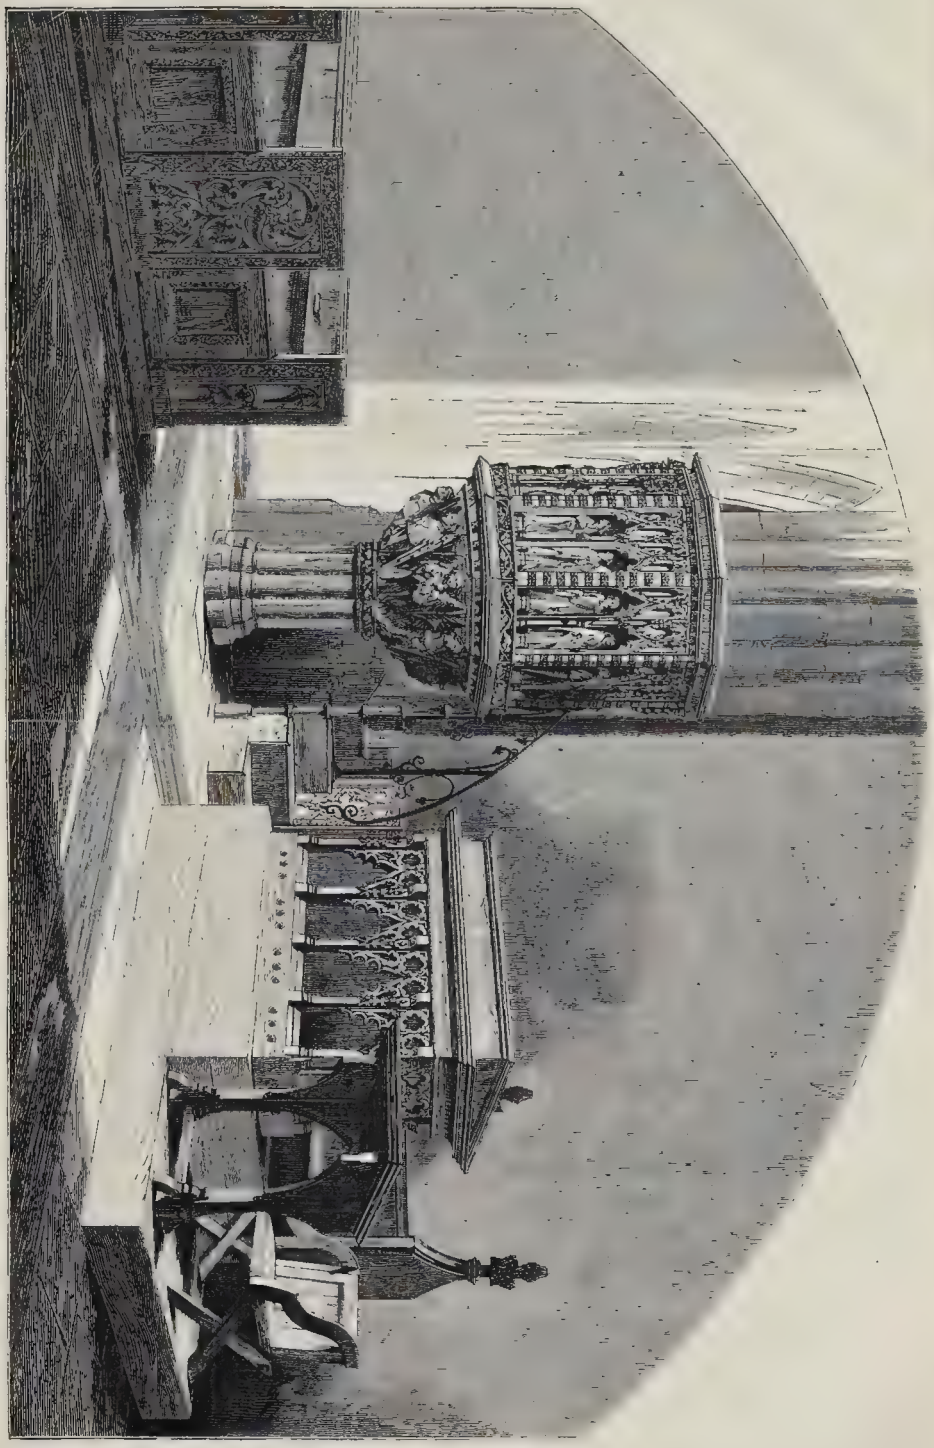
THE DUDLEY WORKHOUSE COMPETITION.

This extraordinary affair has been brought to a stop by the following resolution, passed, according to the Birmingham *Daily Mercury*, at the last meeting of the guardians:—"That as it was found impossible to carry out Mr. Nicholl's plans, the guardians, with great regret, found themselves compelled to abandon them."

A correspondent on the subject, after commenting upon the previous proceedings, says:—

"By reference to the circular sent to the contractors (a copy of which I enclose), you will perceive that the tenders range from 22,690*l.* to 33,270*l.* I ask, sir, in the name of common sense, and for the protection of the well-known contractors, whose names are attached to the highest amounts, where are the grounds for so wide a difference? Each contractor received, by application at the office at West Bromwich, a printed copy of quantities: there cannot be a doubt but they were all alike, yet observe the contrast. This is a case alike interesting to the architect and builder, and almost without a parallel even in these vicious times of competition."

The writer subjoins a list of the leading items in each trade, to show the quantity of work required; but the insertion of it would answer no good end.



NEW FONT AND COVER: CHURCH OF ST. MARY REDCLIFF.

NEW PULPIT, SEATS, &c. ST. MARY REDCLIFF, BRISTOL.

Some time ago the vestry of St. Mary Redcliff determined on removing the incongruous pews and fittings from the interior of their noble church, and substituting others of more fitting character. Tenders were obtained, and that by Mr. William Bennett, of Portishead, was accepted. Part of the works,—namely, the seats in the nave, screens at the west end of it, the pulpit, reading-desk, seats in chancel, &c.—has been completed, from the designs of Mr. Godwin. The whole of the woodwork is of English oak. The pulpit, shown in our engraving, is fully enriched, and has carved figures of the apostles. Around the top of it is written,—"Sanctify them through Thy truth: Thy word is truth;" and again, "Faith cometh by hearing, and hearing by the word of God." The cost of the pulpit was 97*l.*

Some of the bench-ends are carved, as shown: others are left plain, until funds arrive. The reading-desk, made in accordance with the views of the vestry, to accommodate two readers and a "clerk," is moveable.

The font, not in Mr. Bennett's contract, was executed by Mr. Rice. The basin is an octagon, and has on four of the sides groups in relief,—Christ blessing little Children, the Naming of John, the Baptism of Christ, &c. Angels support the basin; and around the stem, under canopies, are eight seated figures, sculptured in alabaster. The rest of the font is of Caen stone. The oak canopied-cover, although determined on by the vestry, is not yet executed.

PULPIT, READING-DESK, AND SEATS; CHURCH OF ST. MARY REDCLIFF, BRISTOL.—Mr. Godwin, Architect.

CANTERBURY IN THE OLDEN TIMES.

Canterbury, Dur Whern, latinized, *Durovernum*, or the "City of the swift waters," as the words imply in the ancient British language,* in which it was also denominated "Caer Ceint," the capital of Kent, derives its more modern denomination from the Anglo-Saxon *Cantwaraburh*. The city, in the days of the Romans, was probably nothing more than a series of dwellings among the trees. These woods covered a vast extent of the neighbouring country even down to a more recent era. A charter of Henry I. relating to the hospital of Harbledown before the hamlet itself bore that name, describes the institution as the "Hospital in the Forest of Blen." Of the importance of Canterbury as a station even in the earliest times there is ample proof: the Romans considered it of sufficient consequence to connect it by stone causeways with Lympne and Sandwich. It was long the metropolis of the kings of Kent, of the Jutes, the most enlightened of the Anglo-Saxon settlers of this country; and in later days it is described as a city renowned throughout Christendom for its edifices and the "glorious saints that lay shrined therein." We turn, then, to seek the vestiges of the Roman, the first authentic invader of Kent—for nothing of the Briton now remains. Somner indeed says, that some British bricks were found in the ancient wall of the city: it is doubtful, however, if his knowledge were sufficiently accurate to decide what British bricks were.

We find evidence of the occupation of the Romans in tesselated pavements, pottery, funeral urns, arms, implements, and personal ornaments, and in the remains of fortresses and villas.† The Saxon, the Roman's successor, and perhaps during the latter period of Roman settlement possessor of some portion of the island, constructed few buildings of durable materials; and the Dane, who often visited the Kentish coasts, was a marauder, whose career was marked by havoc and destruction; and although he temporarily established some authority in this part of England, his tenure was never lasting, and his customs, language, and institutions exercised no permanent influence nor impression. The Norman came, and spire and arch and battlements of stone sprang up around him: the cathedral exchanged its first simple style of construction for a more elaborate and tasteful architecture, and in due time arose one of the most beautiful specimens of its class, the gate of St. Augustine's monastery.

Yet, survey Canterbury a few centuries back from such point of view as its ancient history and descriptions develope, and what a strange scene it would exhibit.

Down the narrow dark streets, unlighted in the gloomiest nights, might be seen the motley inhabitants, wandering forth with links or lanthorns: here, little wooden houses with roofs of straw or rushes presented themselves, or here we might have seen low buildings with overhanging roofs: the eaves of the better, or rather the richer classes, were supported by grotesque figures, called telamonies, goblins, and grinning monsters; whilst runic knots, scrolls, and zigzags, completed the list of all that was intended to be considered as ornamental. Here were lanes, odd nooks, and corners, queer old buildings with some monster or elfin carved upon the massive beams, at which the pilgrim stared, hardly knowing whether to cross himself or not, whether it betokened a saint duly canonized, or a devil, or a punchinello who owed his existence to that comic spirit which the genius of ecclesiastical architecture and art invoked in the middle ages, in strange contrast to its devotional tendencies.

The oldest document in the city archives, with the exception of charters and grants, is dated A.D. 1258. Between this period and the present era we have several volumes of manuscripts, consisting of wills, grants, burgmote rolls and proceedings, chamberlains' and other officers' accounts, and a vast mass of ill-sorted law proceedings, many of them relating to that ancient tribunal the Court of "Piet Poudre," an institution of Norman origin, and supposed to be so called from the appearance of the suitors, who were mostly poor and dust-covered pedestrians from the country.

Domesday Book has several entries respecting Canterbury. In King Edward's time the king had 51 burgesses paying rent, and 212 others under his privilege and jurisdiction. There were three mills paying 118 shillings, and a toll yielding 68 shillings, and eight acres of meadow, belonging to the king's legate, and 1,000 acres of wood not bearing fruit, from which issued 24 shillings, "although he that now holds it pays 30*l.* of money refined and weighed, and 24*l* of money by tale." In the whole, in the time of King Edward, the city was worth 51*l*. The record then goes on to state, that "a certain monk of Canterbury has taken away two houses of two of the burgesses; one without and one within the wall, built on the king's highway."

The earliest mention of a governor at Canterbury occurs in a charter of Christ Church, bearing date A.D. 780, where the name of Aldhunce occurs as *præfectus*. In 950, the name of a portreve (*Hlothewig Portgerefa*) appears in a deed of sale of land in Canterbury. In 1011, a "præpositus regis" was taken prisoner by the Danes. Domesday Book records the name of a *præpositus*, Brumannus.

The castle is mentioned in Domesday: probably, however, it was a very different building from the present, which is of Norman construction. It is recorded in the Crown Rolls, 15th Edward II. "that one William Savage, *janitor portæ*, carried off the daughter of Hamon Trendhurst, and detained her in this stronghold for eight days." Lewis, when he invaded England in the time of King John, received the submission of the castle at Canterbury.

That there was a castle before the conquest, at Canterbury, is evident from the survey of Domesday, in which it appeared the king had this castle for certain burgages, in exchange with the archbishop and the abbot of St. Augustine. Henry II. considerably increased its extent and fortifications. As early as the reign of Edward II. a common gaol or prison was kept within it; and, according to Lambarde, it was at one period the principal gaol of the county. When it ceased to be used for this purpose, at least about A.D. 1577, it fell into neglect and decay. It still presents an imposing appearance; and, although deprived of its tower, its great extent for its area is 88 feet by 80 feet, and its walls about 11 feet thick, gives some idea of its former strength and magnificence.

On the third, or state floor, were large arched windows: at the north side was the grand entrance, now bricked up, and concealed by the works of a gas company. Under this entrance, as in many Norman castles, was the principal dungeon. There were, however, other places of confinement: in one of these the Jews, under one of the persecutions which that people suffered from the bigotry or the avarice of the age, were confined.

Dr. Plot mentions that, in his time, A.D. 1672, many of the stones on the north-east staircase were inscribed with versicles from the psalms, in Hebrew characters. The writer of this paper has in vain endeavoured to find some of these interesting relics. Much, however, of the fabric and materials of the castle have been year by year destroyed, or used for building; and some idea of the extent of this ancient fortress may be surmised, by noting its present remains, and then surveying the manner of small houses in its immediate neighbourhood which have been constructed from its materials.

The present guildhall is a building of comparatively modern construction. It is erected upon the foundation, or rather upon the first floor of an ancient hall, the Gothic stonework, pillars, and arches of which partially remain, and exhibit both solidity and elegance. Here the commons of Canterbury and their corporate functionaries used to meet. There was once, according to Somner, a still more ancient building existing for civic purposes, called the "Spech House," where was likewise a prison; we have very little doubt, however, but that hall was identical with the undercroft of our guildhall, the surface of the streets having risen, by the accumulation of the soil of centuries, from 10 to 12 feet above their ancient level. It was called, as above, the "Spech House," the term "guildhall" being first applied in the charter of Henry VI. when the baliwick of the city was changed into a mayoralty.

The priory of Dominicans, or Black Friars, in Saint Alphage parish, was founded soon after the year 1221 by Henry III. who is said to have built these religious a monastery on the banks of the Stour, on land given them by Archbishop Leighton. Scarcely any of these venerable ruins remain, except the chapel and adjoining premises, and the buildings on the opposite side of the river. The south gateway, built not long before the 30th Edward III. and faced with black flints, was pulled down some years since. The bridge with Gothic arches has been destroyed within our own time, to make way for an unsightly but more convenient substitute. The priory originally formed a square, which enclosed the burying-ground: in this cemetery were buried some eminent persons. The friars possessed land on the other side of the river, down towards Abbett's Mill, and westward towards Saint Peter's: here they held orchards and pleasant gardens. The monastery had two other gates or passages besides the one described above,—one in the street near St. Alphage Church, and the other in Best-lane near the waterlock, opposite the "Prince of Orange" lane, near the Rush Market: this passage led directly to their church.

The chapel was the original hall or refectory of the monks. John Wenar appears to have been the last prior; for on 25th Henry VIII. 6th February, five years before the dissolution, he grants to Richard Burchard, in a lease for forty years, a garden of the Friars' Preachers, close adjoining their house. The original surrender of the priory into the hands of Henry VIII. is lost or destroyed, as it was not in existence in the records when Dugdale prepared his work on monasteries.

The Black Friars' yard appears to have been often used as a gathering-ground for the citizens of Canterbury. Here, under the then bailiff, William de Chilham, they drew up a list of grievances and items of proscription against the monks of Christ Church, because they refused to pay towards the supply and furnishing of twelve horsemen, demanded as a contribution from the city by Edward I. for his Scottish wars.

Archbishop Theodore, the seventh after Augustine, is said to have founded a school or college at Canterbury, by permission of Pope Vitalianus, wherein he placed professors of all the liberal sciences, but this school has long since disappeared. The earliest authentic record of a public school seems to have been about A.D. 1259, when one Robert is mentioned as "master of the school at Canterbury;" after which, in the time of Archbishop Reynolds, arose a great controversy between the rector of the aforesaid school and the parson of Saint Martin, who by right and custom held a sort of free school in that parish.

There are but few allusions to Thomas à Becket in the city records, and those mostly incidental ones. Saint Thomas's-hill was formerly called "Saint Thomas à Becket's-hill;" and on the neighbouring eminence of Harbledown, one of the archbishop's shoes was preserved, or rather the sole of one, which, being set with jewels or coloured stones, the pilgrims, upon the payment of a fee, were permitted devoutly to kiss.

There are a variety of miscellaneous entries in the ancient records of Canterbury:—A.D. 1545, the corporation pay fourteen shillings for a load of wood to burn a heretic, and two shillings to some person to burn him. In 1559, William Sanford recalls the supremacy of the spiritual, not the lay pope, by tolling the "ave" bell, contrary to the half-reformation measures of Henry VIII. In 1550 there is an entry for the "burning of Arden, and the execution of one George Bradshaw." A.D. 1571, Mother Hudson is presented to the grand jury as a witch. Two years later, Queen Elizabeth was at Canterbury, and lodged at St. Augustine's.

It is probable that the Mint existed even in the times of the Anglo-Saxons: at all events,

* Lelan l conjectures, from Dur Avon, the latter term having been, as he writes, a sel ct name of the river, now Stour, at Dover, the ancient name.

† The Museum at Canterbury contains many specimens of Roman antiquities found in or near the city. Among these is a small statue of Latona, in a recumbent posture, taken from a sepulchral urn.

we have the evidence of Anglo-Saxon coin, gold triens struck perhaps under the direction of an archbishop, with the legend of "Dorovernis," on the reverse. A market cross was erected at the "bull's stake," in 1446, in place of an older one.

There are several entries concerning the Dungeon-field. It appears to have been the property of the citizens for recreation from time immemorial: here they shot at the mark with arrows, and here, at a later period, they practised at the target with "blundering musquets," culverins, and other firearms. Somner supposes the mound to have been situated without the walls of the ancient city. This is not unlikely. Much speculation has been hazarded respecting the origin of the mound, and some antiquaries have endeavoured to prove it to be an erection analogous to Silbery-hill and other tumuli, coeval, perhaps, with the ritual of the Sabean or Druidic form of worship. The name assigned to the mound is variously written:—"Totam terram nostram quam habuimus ad Dungonem," Danzonem; also, "in campo qui vocatur Dangun," in a deed of 14th Edward I. likewise, "juxta le Daungeon," as also in rentals of the cathedral; and Roger Brent, in his will, dated 1486, mentioning his manor there, calls it so, and the hill hard by "Dungeon Hill." The common and prevalent impression is, that the name is a derivative from the Danes, as if of the Danes, "Danes' work," being the production of these marauders in some attack upon the city. But its propinquity to the castle, and its similarity to the dungeon mounds commonly erected near the stone castles of the Norman proprietors, appear clearly to point out both its origin and its denomination. Leland, who wrote his "Itinerary" in the time of Henry VIII. informs us that many years previous to his time, men seeking for treasure "at a place cauled the Dungen, where Barnhale's house is now, and ther yn digging thei found a corse closed in lead." On the mound, we are also informed, an ancient windmill once stood. There were anciently two mounds, and the one which remains was once covered with oaks, which, in the time of Elizabeth, a certain Hugh Johns was permitted to cut down, "provided he plant twenty ashes or elms and keep them to grow." From time to time, however, the right of the citizens to take pastime and recreation in this ground appears to have been disputed, and the Dungeon Field, modernly "the Dane John," seems to have been constantly a subject of contention between them and the parties to whom the corporation leased the manor.

The burgmote horn is a curious relic of antiquity. It was blown, on the court day, in some public place, and near the residences of the corporation, to warn them to assemble. At these meetings great strictness of conduct was at one time enjoined; prayers were regularly said, and the Scriptures read; members coming in late, to avoid the service, were peremptorily fined; as were all who presumed to enter with their hats on.

There must have been several gardens, courts, open places, and orchards, and even vineyards, in or near the city. Among these we might note the burial-grounds of the Black Friars, the Grey Friars, the precincts of St. Augustine, and the courts and tree-shaded retreats of the cathedral. Oaten Hill, the two mounds of the Dane John, the river,—then bright and sparkling, the principal stream passing through the centre of the city,—were conspicuous objects. Above the houses arose St. George's, Westgate, and other towers, with floating banners; the structures themselves provided with machicolations, loop-holes, portcullises, iron-bound gates, embattled and crenellated turrets, and other modes of offence and defence. Enclosing these were the city walls, somewhat lofty and conspicuous, at least on the southern and eastern sides, and surmounted with towers at stated distances. Around these walls branched off the river: on one side sweeping by the castle, it formed a defence to the south-west, whilst the main stream entering not far above, by the "Poor Priests' Hospital," flowed through the city. A portion of the current, however, was diverted through the moat or ditch under the Dane John walls, which, flowing round a considerable portion of the city, entered the main stream at the water-lock near Abbott's mill. The other branch of the Stour protected the north-western walls by Westgate, where there was then no road-bridge, but perhaps a drawbridge;—the Parliamentary forces, when they occupied Canterbury, having forded the stream near this locality. The castle, if then dismantled (of which, however, we have no account), must have exhibited an imposing appearance, for it is nearly of the date and style of the edifice at Rochester, which yet so grandly sentinels the Medway.

The houses at Canterbury were for the most part lowly and insignificant. Some of them, however, were highly ornamented and timbered, the eaves, and door-posts, and gateways exhibiting the profuse fancy of the Gothic architecture, in grotesque figures and emblems, some of which still remain. Many of the public buildings were grand; and steeples, belfries, and glittering spires rose above the trees in every direction. In Leland's time there were thirteen churches within the walls and three without; besides which were once five other churches long since demolished. There were hospitals at St. Margaret's, St. Laurence's, and the King's Bridge, the latter for poor pilgrims and wayfarers; a house belonging to the Black Prince's chantry; and a Home for the Order of Knights Templars. There were six gates. There were stone crosses almost in every main street; sanctuaries for wandering merchants, where saints were blessed, and wares disposed of. There were boats and barges gliding up and down the river, and passing the mills by locks. Swans, too, might be observed floating on the waters, guarded by their keepers, called "swanupers," who were engaged and paid by the city authorities. The city walls, a completing portion of which had been added by Archbishop Sudbury in the reign of Richard II. were, in the reign of Elizabeth, efficiently repaired, and adapted for fire-arms, although the archers still practised at the butts in the Dungeon field. No doubt, however, the city, with many a quaint court and curious building, with its old hostelries, and heavy-timbered, wide, projecting houses, its narrow, close lanes, bearing the romantic epithets of "Spech House," "Little Pet," "Break Pot," "Sunny Wine," and "Sheep Shank," exhibited a very different aspect to that of its present appearance. It was, then, for the most part, comprised within the walls, although its liberties extended to the suburbs of Northgate, Wincheap, and St. Dunstan's, localities which, from the presence of hospitals and other public institutions, must have collected a considerable population around them even in those days. Towards the east might be observed the priories of St. John and St. Gregory; and in a more southerly direction arose the ancient tower of St. Ethelbert, now entirely destroyed, and the gate of St. Augustine, which remains as one of the most beautiful specimens of the ornamental Gothic yet preserved in this kingdom. Beyond these, in the distance, was, and still remains, St. Martin's Church, claimed as being founded upon the site, perhaps in part erected with the materials, of one of the oldest Christian temples in England. Near it, in a quiet and beautiful spot, wells a spring, over whose bright, pure waters a benediction of health has seemed to abide from the remotest ages.*

THE BIRMINGHAM SCHOOL OF ART.

THE annual meeting of the Birmingham Society of Arts and Government School of Art was held on Tuesday evening before last, under the presidency of the Earl of Hardwicke.

The proceedings were opened by the reading of the committee's report by the Hon. and Rev. G. M. Yorke, chairman of the committee.

The chairman then addressed the meeting, and was followed by Mr. Cole, C.B. the Inspector General of the Department of Art, who, in his address, stated that having visited some thirteen or eighteen of the principal towns in France, he ventured to say that none of them had anything like the amount of Government assistance which our Government—or, in other words, the public of England—agreed to give to Birmingham. In the towns of France there were schools of art and science in which drawing, modelling, and architecture, were taught, but in all cases they were supported by the locality in which they were situated, the necessary taxation being raised by means of octroi dues imposed on food coming into the town. As far as he had observed, the French Government did nothing whatever for provincial schools except send them an occasional bad picture. At any rate, he had not found in France a single institution which received from its centre so much assistance as Birmingham derived from the Department of Practical Art in London. In reference to the progress of the Birmingham School, he could say with perfect justice, that in his opinion, and that of his colleague, Mr. Redgrave, there was no old school of design in the kingdom which had attained so great a success. Indeed, Birmingham was working almost as well at the present time as they could desire.

Mr. Redgrave, R.A. the Government Art Superintendent, also addressed the meeting. Mr. Cole, he remarked, had said something about the French Schools of Art. He might add to that gentleman's testimony his own belief that Birmingham students were taught much more than students in the French schools.

* These interesting memorials are from a paper by Mr. John Brent, jun. F.S.A. read at a meeting of the British Archæological Association.

THE MASTERS IN TRAINING AT MARLBOROUGH HOUSE.

SOME letters have reached us, not exactly denying the statement made by the writer of the communication headed as above (p. 51, *ante*), but explaining that the head master made use of the words complained of only in reference to the morning attendances, and without any intention of reflecting on the general conduct of the masters in training; and further, that the dismissal referred to was for another reason than that given. One of the writers says,—

"If the class be not composed of men of honour, and good conduct, it must be disgraceful to the officers of the department, whose duty it is to select those whose habits, integrity, and acquirements render them capable of carrying out the great and noble objects they undertake, which are to diffuse a sound and thorough art education, to make that education practical, and assist in developing our national resources and skill; to create a taste which has not before existed in the land; and make that taste minister to the happiness, morality, and glory of our country."

Another correspondent complains that "the master of the Kensington branch school was lately met, at the door of his class room, by an attendant, with the assurance that if he attempted to enter he would be, by the orders of Mr. Burchett, head-master, forcibly ejected; and although immediate application was made by him to the authorities at Marlborough House, he has been unable to obtain any, even the slightest explanation of so singular an outrage."

Without passing any judgment on individuals, on insufficient evidence, it would surely seem that matters are not going quite so smoothly as they should, and require looking to.*

REMOVAL OF TENANTS UNDER THE NEW METROPOLITAN BUILDING ACT.

AT Worship-street, the other day, Mr. Charles Reeves, the surveyor to the Commissioner of Sewers, attended before Mr. Hammill, to obtain from him a peremptory order for the expulsion of the occupants of certain houses at Mile-end, under the following circumstances:—

Mr. Reeves stated that the prosecution was the first of the kind which had been instituted under the 18th and 19th of the present reign, cap. 122, and which only came into operation on the 1st of January last. The section of the statute under which he made the application was the 80th, the terms of which enacted, that in all cases where any structure had been certified by a competent surveyor to be dangerous to its inmates, a justice of the peace might, if satisfied of the correctness of such certificate, upon the application of the commissioners, by order under his hand, direct any inmates of such structure to be removed therefrom by a constable, or any peace-officer; and if such inmates had no other abode, he might require them to be received into the workhouse established for the reception of the poor of the place in which such structure was situated. In pursuance, therefore, of an intimation he had received from the police authorities, he had that morning proceeded to inspect a locality called Spring-gardens, at Mile-end Newtown, where he found a number of houses, consisting of twenty-one in all, the whole of which were in such a state of ruinous dilapidation, as not only to place the lives of the inmates themselves in imminent danger, but also those of any persons passing through the street. It was manifest such a state of things could not be

* Since the above was put into type, we have received some very lengthy communications on the subject, but they do not lead us to a different inference.

allowed any longer to continue; and he had, therefore, forwarded a certificate to that effect to the commissioners, who had at once directed him to take the necessary steps for the removal.

After some conversation, the magistrate affixed his signature to the order; and it was handed over to the officers, that it might be carried into execution forthwith.

ST. SAVIOUR'S, SOUTHWARK.

IN your number of the *Builder*, the 26th of January last (p. 46), you have mixed up my name, with other gentlemen who have been engaged as well as myself, in mauling and overhauling the parochial church of St. Saviour, Southwark, at various periods during the last thirty years. Now, as I have no wish to interfere, or to assume the merit or demerit of anybody's work but my own, I trust you will do me the justice and favour to separate my doings from others who have been my competitors, in what has been called a restoration or rebuilding of the ancient structure.

I must, therefore, begin with the Tower (1818), which I found in a dangerous state. It was encompassed, inside and out, with cast-iron ties of rather peculiar construction; and the four pinnacles were *saved*, notwithstanding some strenuous efforts for their demolition.

In the year 1822 the Choir was taken in hand, a considerable portion of the triforium and clerestory was rebuilt, the east-end window inserted after the model at Salisbury, and nearly the whole of the chalk vaulting taken down and rebuilt, not with lath and plaster as in the transepts.

As to the Lady Chapel or Spiritual Court, in 1832, the restoration was left entirely with me: the only condition annexed by the gentlemen who kindly undertook to pay for it was, that the cost of it should not exceed 2,500*l*. Another 500*l*. would have been serviceable, but it was not to be had; and I may think and trust that the 2,500*l*. were well laid out.

Now as to the so-termed restoration or rebuilding of the transept, the credit (?) belongs entirely to Mr. R. Wallace, as also the altar-screen, both about the year 1830. The south transept, now rebuilt about twenty-five years, affords a most admirable lesson to the student in *decaying* Bath stone.

The final destruction of the nave, under the auspices of Mr. Rose, was much to be deplored,* and your observations will no doubt be agreed to, *nem. con.* It was inconveniently raised to afford room for the dead below, now rendered utterly nugatory.

I ought not to close this communication without a tribute of praise to the present worthy chaplain, the Rev. William Curling, and Mr. Williams, warden of the Great Account, for the insertion of memorial painted windows (by Ward) of six of our early martyrs, in the spiritual court, and the required removal of some obstructions. The picturesque effect inside and outside is greatly improved. GEORGE GWILT.

THE FALL OF WALL IN THE NEW-ROAD, ST. PANCRAS.

ON the 5th inst., the inquiry touching the recent loss of life caused by the fall of wall at Messrs. Hopkinson's factory was resumed.

Mr. Parry, instructed by Messrs. Jaques, Layton, and Co., of Ely-place, with Mr. Orridge, appeared as counsel for Messrs. Hopkinson: Mr. Talfourd Salter, in the absence of Mr. Ballantine, represented the County Fire-office: Sir Richard Mayne attended to give evidence as to the proper performance of the duties devolving upon the police authorities in cases under the new Act; and Mr. M. Nelson, who had surveyed the premises by direction of the coroner; Mr. Reeves, the surveyor to the metropolitan police; Mr. Baker, the district surveyor; Mr. Beaumont and Mr. Tims, gentlemen connected with the County and other fire insurance-offices, as also the Messrs. Hopkinson, were present during the inquiry.

Sir Richard Mayne said that, on the morning of the 25th of January, he received a report, that the wall of Messrs. Hopkinson's factory, in Diana-place, had fallen, and had crushed the houses numbered 3, 4, 5, and 6, Fitzroy-place, and that a body had subsequently been found in the ruins. He subsequently received a notice, under the 69th section of the New Building Act, relating to dangerous structures, from Mr. Baker, the district surveyor of St. Pancras. This was also dated the 25th; and he immediately gave orders to Mr. Reeves, the surveyor to the police, to make a survey and report to him. He reported the remainder of the walls in a dangerous state, and the owners were at once served with notice to shore them up and secure them. This was served on the owners on the 28th, after the wall had fallen which crushed the houses and caused this death.

Sir R. Mayne, in answer to questions by the coroner, said he considered he had taken every step necessary under the 69th section, which stated "that when any building, wall, or other structure, is in a dangerous state, the commissioners should require a survey of such structure to be made by the district surveyor, or some other competent surveyor." He had done so. He had given no new instructions to the police in reference to fires since the passing of the act, or in reference to the safety of buildings or structures.

Mr. Henry Baker, the district surveyor, saw the building on the Monday after the fire, and he subsequently inspected it, before the wall fell. It was then a good wall, quite safe, perfectly upright, and there were no cracks whatever in it that he saw. His belief was, that but for the very high gale which prevailed on the Thursday it would have stood for years.

Mr. I'Anson, the builder of the premises in 1852, said the wall was sound in every way, and was supported, back and front, by buttresses, and it was perfectly straight.

Other witnesses having given evidence,

The Coroner remarked that he did not, after what they had heard, think it necessary to examine Mr. Nelson upon the subject, unless the jury desired it. This inquiry had been useful, as it had brought out some curious anomalies in the New Metropolis Buildings Act. It was certainly an improvement upon the old measure, but it did not go far enough. A verdict of "accidental death" was recorded.

DRAINAGE OF ST. JAMES'S-PARK.

DURING the past month some heavy works have been in the course of execution in Whitehall and under the stone building of the Horse Guards, in constructing a brick culvert, which it is intended to continue across the Parade-ground to the lake in the inclosure of the park, for the purpose of draining off whenever considered necessary, the whole of the ornamental waters, in order to cleanse the reservoir. At present there is only an overflow drain, sufficient to maintain the level of water in the park, which is occasionally used for letting off the superfluous waters; but the remaining quantity contained in the reservoir averaging a depth of about 9 to 10 feet, is comparatively stagnant, and has not been emptied for many years.

About the year 1829, with this view, and by order of the Government, a steam-engine was employed to lift the water to the level of the overflow drain; but this operation was abandoned long before the desired object was accomplished.

A correspondent informs us, that the works which are now in progress were designed by the engineers to the late Metropolitan Commissioners of Sewers.

The difficulties, the writer says, which have had to be contended with in going under the heavy building and clock tower of the Horse Guards, have been of a very trying nature, the culvert constructed beneath it averaging 13 feet below the foundation of the building, the lower 5 feet of which had to be excavated and tunnelled through running sand and silt, with much of water from land-springs, which were more or less affected at the rise of every tide in the river. Mr. G. T. Fry is the superintending clerk of works; and Mr. Joseph Yeoman the contractor.

ELECTION OF SUPERINTENDING ARCHITECT OF METROPOLITAN BUILDINGS.

THE Metropolitan Board of Works met on the 4th inst. and proceeded to elect a superintending architect. The chairman said he had received applications from sixteen candidates, viz.:—Messrs. W. Hosking, E. W. Lower, J. Blore, J. H. Taylor, F. Marrable, G. L. Taylor, G. Legg, H. Harrison, J. T. Wood, C. W. Pined, Thomas Taylor, John Barnett, E. C. Hakewell, Wm. Young, F. W. Stent, and S. C. Gant. He ought, however, to state that that morning he had received a letter from Mr. G. L. Taylor, withdrawing his name, as he considered the salary offered for the duties too small. A member of the board very properly advised that the appointment should be deferred, and the question of salary re-considered: it was, however, negatived. The list of names, without meaning any disrespect, must have shown the board that their proposal had not found favour in the eyes of men of standing in the profession.

Four of the candidates were first selected by show of hands to go to the final election; namely, Professor Hosking, Mr. Marrable, Mr. Hakewell, and Mr. Barnett; and each of these, after their applications had been read, addressed the Board, and answered such questions as were put to them. We need, however, only mention one, put by the chairman to Mr. Hosking, with reference to the effect of clause 114 of the Building Act, which says:—"Any person, *except* the said official referees and registrar, who at the time when this Act comes into operation is employed in the office of metropolitan buildings may, within six months from such time, apply to the Metropolitan Board of Works for employment; and such Board shall thereupon take such application into consideration;" and we must conclude, from the result, that the reply failed to assure the Board that this clause, although worded without any such intention, might not be made a ground of objection, in the event of Mr. Hosking's election. This note is due to Mr. Hosking, who came forward as a candidate rather from a sense of duty than otherwise.

Three several shows of hands were then taken, and ultimately Mr. Marrable was elected superintending architect.

Mr. Marrable said, in his address, that he had been engaged for some time under Mr. Edward Blore: and that, as to the want of age and experience which some had urged against him, every day would lessen the objection.

THE ART-UNION OF LONDON.

ON Monday next, the print for the year, "Harvest in the Highlands," from the well-known picture by Landseer and Callcott, will be delivered on payment of the subscription; and we advise all our readers who value a fine print to make early application for it. It is engraved by Willmore, in his best manner, and is worth much more than the amount of the subscription, although, in addition, each subscriber will, as usual, have the chance of obtaining a work of art, to be selected by himself, from one of the current exhibitions; or a bronze or Parian statuette.

The friends of this most useful society will be glad to hear that the Council have now in hand some works of extraordinary excellence and beauty.

A correspondent writes to urge the Council to issue a work in *colours*. He says:—"To colour an engraving is unsatisfactory. To use the words of Sir Walter James, 'a coloured print can be none other than a miserable failure.' Having just had coloured, in the best manner, the excellent print of 'The English Merry-making,' I can testify to the truth of the hon. baronet's assertion. I cannot but think, if the experiment were tried of introducing, in place of the present colourless print, some such beautiful specimen of chromo-lithography as Hunt's 'Apple Blossom,' or 'Bird's Nest,' it would be found eminently successful."

We happen to know that the Council have long had this subject under their consideration, but have not yet found what they consider a suitable production of the kind.

THE VICTORIA TUBULAR BRIDGE AT MONTREAL.

WE see from the "Canadian Railway and Steamboat Guide," published at Montreal, that in consequence of some doubts having been expressed as to the comparative economy of a tubular bridge to cross the St. Lawrence on the Grand Trunk line of Canadian railways, Mr. R. Stephenson has addressed the directors in a long and elaborate report, in which he enters fully into the subject, maintaining that a tubular bridge is, on the whole, the best as well as cheapest bridge that can be thrown across such a river as the St. Lawrence. He compares the work with other and as nearly as possible parallel instances in which such bridges have been preferred. One of these is adduced as the most remarkable parallel case, namely, the triangular or "Warren" bridge, erected by Mr. Joseph Cubitt over a branch of the Trent, near Newark, on our own Great Northern line. "The spans," he remarks, "are very similar, and so are the depths. In calling your attention to the comparison, you must bear in mind that all possible skill and science were brought to bear upon every portion of the details of the Newark Dyke bridge, in order to reduce the total weight and cost to a minimum. The comparison stands thus:—

Victoria Bridge as being erected.

Span, 242 feet; weight, including bearings, 275 tons, for a length of 257 feet.

Newark Dyke Bridge, as erected.

Span, 240 feet, 6 inches; weight, including bearings, 292 tons, for a length of 254 feet;

which shows a balance of 17 tons in favour of the Victoria tubes. The Newark Dyke bridge is only 13 feet wide, while the Victoria tube is 16 feet, having a wider gauge railway passing through it." Meantime the Victoria bridge approach works are progressing; but when the whole may be finished, is a question on which there seems to be much doubt and anxiety at Montreal.

* See "Archæologia," vol. 29, pl. 29; and a clever lithograph, by George Hawkins, October, 1834.

A COMMENTATOR ON VITRUVIUS.

THE difficulties of understanding the treatise of Vitruvius are being cleared away, and we have before us a contribution to the unravelling of a portion of the work which had given much trouble.* Mr. Bonomi does scarcely justice to himself in saying there is nothing new or original in the few important pages that he has printed. By collating the Latin text, and the translation by Wilkins, with a translation into Italian by Leonardo da Vinci; and by notes, explanatory remarks, and diagrams of his own, he has succeeded in rendering the celebrated canon of the proportions of the human frame intelligible, if not practically useful to artists. Hitherto, the diagrams by the different editors, had been singularly unsuccessful: but the diagram now supplied from a drawing by Leonardo da Vinci —preserved, together with the translation, in the library of the Academy of Venice—clears up the obscurity. Mr. Bonomi refers to the use of guiding lines in the Egyptian works; and alluding to the statement of Vitruvius, that his canon was that used by all the famous artists of antiquity, the present writer suggests that we have probably in it the celebrated canon of Polycletus. It seems likely that Leonardo had access to some copy of Vitruvius, which has not been preserved to our time. The value of Leonardo's explanation consists in the manner of combining the circle and the square, and in its affording some additional divisions, as those marked by horizontal lines, dividing the square into equal spaces. Thus, beginning from the soles of the feet of the erect figure, the first division determines the length of the leg by crossing at the top of the tibia. The second division determines the length of the thigh, crossing the body at the bottom of the pubis. The third line crosses the chest at the centre of the nipples, and the fourth touches the top of the scalp. The corresponding perpendicular lines also determine points. The outer perpendiculars of the square touching the tips of the fingers when the arms are outstretched,—the first division inwards determines the length of the fore arm. We have thus a square of which each side is divided into four equal parts, called cubits, each cubit being equal to $1\frac{1}{2}$ foot, or to 6 palms. Each palm contains four digits. The lateral dimensions of the figure vary in proportion to the height, with individuals. The other proportions of height, referred to by Vitruvius, are elucidated; and they are compared with those adopted in some of the best works, and with the system of the moderns. In the ancient canon, no division was found, such as that adopted by Audran, Clarac, and all modern artists,—viz. that of the head into four equal parts, and those parts into twelve minutes; for, in fact, as our author shows, no such division exists,—the head being an eighth of the whole height, and the face a tenth of the whole height: nevertheless, he shows that the scales which he has figured (and which form, with the diagrams, useful contributions to our knowledge of the ancient measures of length) may be applied,—each digit being equal to four minutes; consequently, three digits are equal to one part, and, therefore, twelve digits, or three palms, are equal to one head, or one-eighth of the whole height.

Our author has manifested considerable literary as well as artistic ability in the manner in which he has presented such points to our notice. To the architect it should be especially gratifying to examine the latest commentation upon an old author, who, however much he may have been sometimes depreciated, and sometimes unnecessarily extolled, can never be otherwise than interesting, if not directly useful, by his precepts; whilst to others Mr. Bonomi has now rendered the canon of Vitruvius, or Polycletus, so serviceable, that no painter or sculptor can well afford to defer the study of the useful pamphlet which we have made the subject of our notice.

MR. BRASSEY.—By a decree dated January 12, Mr. Brassey, the eminent engineer, has been appointed a Knight of the Legion of Honour. Since 1839 Mr. Brassey has been connected with the construction of the principal French railways.

* "The Proportions of the Human Figure:" with six Illustrative Outlines. By Joseph Bonomi, Sculptor. London: Renshaw.

Notices of Books.

A Treatise on Electricity, in Theory and Practice. By AUG. DE LA RIVE, Foreign Member of the Royal Society of London, &c. In 3 vols. Vols. I. and II. London: Longman and Co. 1853-5.

THIS will be a standard work on Electricity when completed. The first volume was printed some time since, but circumstances delayed the progress of the second, which was intended to be the last: although nearly twice as large as the first, however, the author finds that his subject is not even yet exhausted: hence there will be another volume, which is to appear in course of the present year. The work is translated from the French manuscript by Mr. Charles V. Walker, who has carried it through the press. De la Rive is a celebrated electrician, and he deals fully and in a friendly way with other men of science eminent in his own sphere; so that to all who desire to have an acquaintance with the recent ideas and experiments of electricians, and with the theory and practice of electricity generally, this is one of the most valuable as well as most recent sources which they can consult.

VARIORUM.

HALLAM'S "Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries," fifth edition, in four volumes, is now being issued by Mr. Murray. High as this excellent work stands in public estimation, the lapse of time only proves that it is acquiring a still stronger hold on the general favour.——"Enquire Within upon Everything," published by Messrs. Houlston and Stoneman, of Paternoster-row, seems really to be a most diversified and valuable compendium of useful receipts, advices, and instructions for household and general reference. It treats of all sorts of things, from mending broken china to "how to get married."

Miscellanea.

THE BUILDERS' BALL.—We must remind our readers that the annual ball for behoof of the Builders' Benevolent Institution comes off on Thursday, the 14th inst. at Willis's Rooms, King-street, St. James's, at 9 p.m. when it is to be hoped that there will be an imposing turn out of the friends of the Institution. "I am no dancer" is no excuse in the cause of charity: all are promenaders at least, and the dancing can be left to the younger and more agile amongst the crowds whom we hope to see in attendance. The balls already given have produced no less a sum than 700*l*, for this excellent charity, and we trust an effort will be made so that the receipts on the present occasion may materially increase the amount. We hope no question of "dignity" will keep away those who ought to assist it elevating its character by their countenance and support. Tickets may be had from the Honorary Secretary, Mr. Joseph Bird, of Hanover Cottages, Regent's-park, from the numerous stewards, or at the office of the Institution, 19, Southampton-street, Bloomsbury.

THE MASONS' PROVIDENT INSTITUTION.—The Annual Meeting of the members and friends of this institution was held on the 23rd ult. at the Athenæum, in George-street, St. Pancras, Mr. C. H. Smith in the chair, when the Secretary read the annual report, from which we regret to find that the institution is not in so flourishing and hopeful a condition as we could wish. There can scarcely be said to be any serious retrogradation as yet, but the state of affairs only justifies what we long since urged, that the several kindred institutions now in existence should be amalgamated into one general association. Meantime the president of the Masons' Provident, Mr. Tite, has signified his design to consult with other friends of the institution as to what should be done to forward its interests.

KENDALL AND OTHERS AGAINST THE VISITORS OF CAMBRIDGESHIRE LUNATIC ASYLUM.—This important case, which has been running on for a very long time, has been finally decided in favour of the architects. In order that we may give the particulars of it at greater length than we could find space for to-day, we postpone a report of it.

FLUE PIPES.—A correspondent suggests, that architects and builders are wrong in using glazed earthen pipes, for chimneys, 9 inches diameter outside, and about $7\frac{3}{4}$ inches inside, being much too small: the consequence is, he says, the chimneys invariably smoke.

OXFORD ARCHITECTURAL SOCIETY.—The first meeting for the term was held on the 30th ult. when a report was read, commenting on works lately done in Oxford. The Hon. H. C. Forbes, M.A. of Oriel College, read a paper,—being "Preliminary Remarks to a Course of Elementary Lectures on Gothic Architecture." Mr. Parker said he was sorry to express any difference of opinion with a part of a paper with most of which he so cordially agreed, but must continue to protest against the use of the terms first, second, and third Pointed, especially in Elementary Lectures, as they are calculated so frequently to mislead beginners in the study of Architecture. It is not yet settled which is the First Pointed Style, whether the Saracenic or the Romanic Architecture of the eleventh century in the south of France, which are Pointed Styles, though not Gothic. The Early English Gothic of the thirteenth century is certainly not the *First Pointed Style*. Another objection to the use of this term is, that there are great numbers of round-headed doorways, square-headed, and segmental-headed windows in all the Styles in England, and that beginners are continually misled by names, and cannot understand that a round-headed doorway can be anything but Norman, although the mouldings and ornaments may show clearly to a more experienced eye that it is of the thirteenth century.

MASTERS AND WORKMEN.—The Messrs. Doulton of Lambeth have recently completed a new building for their works, and on the 22nd ult. they inaugurated it by an entertainment to their workmen. In the course of some speeches, which were delivered on the occasion, Mr. John Doulton said,—Masters had more to do with their workpeople than merely paying them money; and though some manufacturers might think that when they had paid the wages there was an end of the matter, they did not think so. Let it ever be remembered that the interests of men were closely connected with each other: the firm, of which he was a member, recognizing that, had always endeavoured, so far as it was in their power, to provide for the moral and intellectual good of those they employed, thinking that by so doing they were best discharging their duty. They were all dependent upon each other: the head could not dispense with the hand, nor the body with the feet. They had, therefore, a hand in the erection of that building, and an honest pride in endeavouring to keep at the top of the tree. Mr. Henry Doulton in like spirit rejoiced to know, that as masters and men, they did not consider their interests were antagonistic: on the contrary, they perceived that the prosperity of the employer benefitted the employed. He felt gratified at the fact that although he was the master, they regarded him as their friend. It was impossible to open the new building under more favourable auspices: as employers, they could not forget that they were indebted for its erection to the industry of their men, for without their efforts it would not have been achieved.

COMPULSORY DRAINAGE UNDER THE METROPOLIS LOCAL MANAGEMENT ACT.—At the Southwark police court on 1st inst. the owner of five small houses in Cottage-place, White-street, Bermondsey, was summoned before Mr. a'Beckett, under the Metropolis Local Management Act, by order of the vestry of the parish of Bermondsey, for allowing them to be in a filthy condition, and injurious to the health of the inhabitants, &c. and after some evidence was led and explanations made, Mr. a'Beckett ordered a cesspool to be emptied and filled up, and proper drains constructed, so as to communicate with the sewer; at same time directing the defendant to pay 2*l*. 9s. 2d. costs. The owner, of two houses in the same vicinity, was summoned under the same act, for having open cesspools, and the water-closets in a filthy condition, when, Mr. O'Brien and Dr. Richmond having sworn that the water-closets did not communicate with the sewer, the magistrate made the required order, with 1*l*. 3s. 8d. costs.

THE PHOTOGRAPHIC SOCIETY.—The present exhibition at No. 5, Pall-mall East, is certainly the most interesting the society has yet formed. The advance that has been made in the production of architectural subjects is extraordinary. See, for example, "Peterborough Cathedral," by Mr. Craddock (84); Mr. Pumphrey's frame, containing six subjects (153); Mr. F. Bedford's "Baptistery, Canterbury Cathedral;" and many others. The committee ought to require that those photos that are "touched" should be distinguished.

PROGRESS OF INSTRUCTION IN ART.—Notwithstanding the war, Birkenhead, Basingstoke, Andover, Southampton, Plymouth, Belfast, Cork, and Limerick, have established or re-established schools of art during the past year, making at the present time a total of sixty-three schools throughout the United Kingdom. At the beginning of this year, Manchester started elementary drawing classes in no fewer than fourteen parochial schools: each class numbers forty students, and each student pays a penny a week for the instruction, which is thus wholly self-supporting.

Dismissal of a Surveyor.—In the case of Bray v. Chandler, tried February 1, in the Court of Common Pleas, the plaintiff was a surveyor, and the defendant a solicitor, at Sherborne, in Dorsetshire, and also owner of the Northumberland-park estate, at Tottenham. In February, 1855, the defendant engaged the plaintiff to act as surveyor on that estate, at a salary of 200*l.* a year, for 2¼ years, and he was in addition to have a commission for letting and selling the property. Part of the agreement was, that the plaintiff should make all such plans and surveys as the defendant should require, that under no pretence whatever should the plaintiff contract any debt in the name of the defendant, or receive any money on his account. The plaintiff was dismissed from his employment in September last, and he now sought to recover about 20*l.* for commission, 33*l.* 6s. 8d. for salary due to the time of dismissal, and also damages for the loss of the employment. The defendant's case was, that the plaintiff had broken his agreement, inasmuch as he had received on account of the defendant 7*l.* 10s. as deposits from persons taking houses, and that he had incurred a debt for him to the extent of 4*l.* 10s. for putting up the names of the streets. It was also said that the plaintiff had not properly prepared some plans and specifications, and that he had in some instances charged commission for letting houses which had been actually let by a person named King, who was also employed upon the estate. The jury ultimately found a verdict for the plaintiff.—Damages, 200*l.*

Elmes's Testimonial Fund.—A trust has been constituted, and it has been resolved,—"to give the interest of the fund to Mrs. Elmes for her life; on her decease, to her son for his life; and on his decease, to found two scholarships, to be called the 'Elmes Scholarships,' for architectural students, or students of the fine arts, available for two years each; to pupils of the Royal, the Collegiate, or the Mechanics' Institution [Liverpool, we suppose], as the trustees for time being may decide on the merits of a specific examination for the purpose." Vacancies in the number of trustees are to be filled up "by election by the presidents for the time being of the Royal, the Collegiate, and the Mechanics' Institutions [Liverpool], and of the Royal Institute of British Architects; and in case any three of them should not agree, the mayor of Liverpool for the time being to have the casting vote." The balance in the bank is stated to be 1,449*l.* 6s. 2d.; and it has been resolved, —"That a bond of the corporation of Liverpool be taken out for 1,400*l.* that body having agreed to allow 5 per cent. per annum interest; that the expenses of the trust deed and bond be paid out of the surplus money; and that the balance, if any, be paid over to Mrs. Elmes."

The Gallery of Illustration.—When Mrs. Reed, better known as Miss P. Horton, commenced her "Illustrative gatherings" at St. Martin's Hall, we were constrained, in spite of our admiration of the great talents of the lady herself, the musical ability of Mr. Reed, and the cleverness of the entertainment generally, to find fault with the arrangement of the stage as inartistic and trumpery. Mrs. Reed has now re-commenced her entertainment at the Gallery of Illustration in Regent-street; and, with the aid of Mr. Grieve, has this time provided herself, by way of compensation, with a charming apartment, curtained and decorated, with conservatory at the back, into which the sun shines through the clear air; the whole forming as pretty a picture as eye would desire to look on. Of the performance itself we cannot speak too highly: it ought to be very popular, and doubtless will be.

Churchyard of St. Margaret's, Westminster.—Some few years ago, you kindly inserted a communication from me respecting St. Margaret's churchyard. Allow me to recall your attention to the matter. It certainly is "passing strange" that, being so near to our legislators, and doubtless forming to many of them an approach to the Houses of Parliament, this churchyard should nevertheless be allowed to remain in so disgraceful a state as it is. It is not only disagreeable to all who have to pass through it, on account of the effluvia so constantly arising from the graves, but it is positively dangerous, for the stones which mark the resting-places of the dead are arranged in such a remarkably disorderly manner, and at such various levels, that it is at all times difficult to cross it without many a stumble; and in a fog, or at night, the passage is yet more arduous. There seem to me two simple remedies: one would be to remove the whole of the stones level the ground [illegible] in the usual thoroughfares, and plant the other portions with evergreens. This would add much to the appearance of the Abbey, especially if the land around that venerable pile were treated in a similar manner. The other method would be to pare the whole of the yard to one level, and then, if it is requisite, the tombstones might be brought in very nearly in their present places.—J. N.

Compulsory Repair of Dwellings of Poor.—A letter by Mr. F. Vigers, of Frederick's-place, Old Jewry, London, to the President of the Metropolitan Board of Management, has been printed, suggesting means for the improvement of the dwellings of the Metropolitan poor. The principal recommendation of the writer is, that in the event of the owner failing to comply with an order to repair dilapidated premises, which the Metropolitan Board shall be empowered to give, the Board shall effect the repair, and subject the property to an annual charge for interest and proportion of principal.

The Patent Universal Safety Hook.—Hunt's patent hook for cranes, polechains, waggons, railway, navy, and other uses, affords the means of instant release, whatever the strain, as for instance in the separation of coupled carriages while running off the rail, or in freeing fallen hors s from their traces without cutting, &c. The hook can be had of any size or shape. It is made somewhat on the watch-guard hook principle, but with additional movement. The semicircular hooking part can be readily replaced in the pin joints when worn. The whole is made fast, and released, by the turn of a collar attached to the neck or head of the hook. The invention is said to be superior in strength as well as security to other modes of hooking heavy weights.

Iron and Steel.—Mr. H. Bessemer has recently patented a process for the conversion of iron into steel in retorts or chambers placed in a vertical position, to allow the iron or steel under operation to descend through them by the force of gravity, and thus allow the process of cementation to go on continuously; melting in close pots, or vessels, steel made by puddling pig or refined iron, until so much carbon only is left in combination with it as to constitute steel; an arrangement of separate compartments, or pot chambers, in a furnace for founding steel, or mixtures of steel and cast-iron, and a peculiar method of conveying the molten metal to the mould, &c. Mr. Bessemer also specifies under another patent for a mode of casting railway wheels of molten steel, or steel and iron.——Messrs. Morewood and Rogers, of Enfield, have recently taken out a patent for a new method of coating sheet-iron for the use of the japanner, for painted work, and various other purposes. The process consists in obtaining a coating of tin or zinc from an acid solution, instead of dipping in melted metal, and in afterwards applying a non metallic coating of a material repellant of moisture, and which may be employed at so low a temperature as does not interfere with the original toughness of the iron. A resinous material is preferred, which will facilitate the process of soldering.——The iron trade in South Staffordshire and East Worcestershire, is reported to be in a good state, prices downward in tendency.

The Liverpool Timber Trade.—From various circulars of firms engaged in the timber trade at Liverpool, it appears that, taking everything into consideration, the state of the timber trade is on the whole satisfactory,—indeed more so than in 1854 and 1853. The importations from the Baltic are less than half the usual average, and chiefly from Sweden, but the chief falling off has been in the arrivals from St. Domingo, Cuba, and Demerara. Want of tonnage seems to be the chief cause of complaint. The following tables show the number of vessels, and their tonnage, employed in the timber trade of the Mersey during the year, contrasted with those employed in the previous one:—

From Jan. 31st, 1855, to 30th Jan. 1856.			
British America	397	vessels	307,294 tons.
Baltic	37	„	10,825 „
	434		318,119
From Jan. 31st, 1854, to Jan. 31st, 1855.			
British America	421	vessels	311,109 tons.
Baltic	69	„	19,562 „
	490		330 671

The most remarkable feature in the trade is the great advance in the value of Quebec yellow pine timber, and the continued low price of spruce deals, essentially building timber. Owing to the extraordinary import of spruce deals, and large accumulation of stock, they have continued at their low value throughout the season, whilst Quebec pine, having been imported sparingly, has advanced from the low price of 1s. 2d. per foot to its present high rate of 1s. 7½d. and 1s. 8d. and even 1s. 10d. for a cargo of large average. In July, St. John pine was worth from 1s. 8d. to 1s. 9d. per foot for 15 inch average, and it continued gradually to rise till September and October, to 2s. and that of 20 inches to 2s. 2d. the wind cargo. Later in the season, when superior qualities were exhausted, the arrivals being pressed on the market, only realized 3½d. to 4d. per foot over the average girth.

Board of Examiners for District Surveyorships.—At the first meeting of the Board of Examiners appointed by the Royal Institute of Architects, various candidates came before them, and the board agreed to recommend to the Institute that a certificate should be granted to Mr. R. Booth, Mr T. Myers, and Mr. G. Elkington. The certificates have since been sealed.

Charges for "Instructions" and "Quantities."—Happening to be in Rugby on business a few weeks since, I paid my half-a-crown, and had the felicity to obtain, "*sur-le-champ*," a copy of the instructions for the new town-hall competition. On glancing over this precious document, I saw at once that its requirements involved an utter impossibility, thus rendering the exaction of the 2s. 6d. still more atrocious; for I venture to affirm, advisedly, that no individual of common honesty or common sense would ever think of becoming a competitor under such conditions. However, that which I more particularly wish to relate comes now. To a certain builder of Rugby, connected with the town-hall speculation, I made some remark as to the objectionable nature of this charge for the instructions; whereupon he slyly confessed that it certainly was not justifiable, as,—for instance, not a whit more so than an architect's demand of from one to ten guineas for bills of quantities, in the case of competitions amongst builders. They, as well as architects, observed he, were put to great personal trouble and expense in such matters, and it was scarcely fair to exact a surveyor's perquisite beside. Several complaints of this Rugby proceeding have been made in your journal, but would it not be advisable to set our own affairs in order before indulging in rash criticisms of those of other people? Let your readers turn to the first page of a recent *Builder*, and there they will see, in an advertisement, that a sum of *three guineas* is demanded by an architect from every intending competitor for the execution of a building; and the cream of the joke is, that "the committee do not bind themselves to accept the lowest or *any* tender," nor do they even pledge themselves to return the money under *any* circumstances. Methinks this is quite on a par with the Rugby affair, at all events.—Frank.

Slag compared with Slate.—As to the value and weight of each per foot, calculating 1½d. per foot, the supposed price of Duchess slate when prepared for roofing:—

VALUE.

	Value.	Ironstone Slag. Per Ton.	Clay Slag. Per Ton.
	£ s. d.	£ s. d.	£ s. d.
Slag ½ inch thick	13 5 7½	2 13 0	3 6 6
Slag ¾ inch thick	26 11 3	5 6 0	6 13 0
Slag ⅞ inch thick	53 2 6	10 12 0	13 6 0

WEIGHT.

	Slate.		Ironstone Slag.		Clay Slag.
Feet.	Tons.	Cwt.	Tons.	Cwt.	Tons.
3,125	2	8½	3	6	4
4,570	3	3	5	6	4
8,000	10	7½	5	6	4

The clay slag is calculated by the weight of the Rowley rag slag, the ironstone slag by Dr. Smith's estimate of the weight of iron slag, and the slates by the price and weight per thousand, charged at Blisworth Wharf. As the above calculations can be verified, what is there to prevent the ironstone and clay slags being manufactured, but the fear of making iron too cheap, as the manufacture has been proved beyond all doubt in all the slags.—W. G. Elliott.

Blisworth, 29th January, 1856.

TO CORRESPONDENTS.

"*Cleansing Oil Paintings.*" To remove dirt, a little soap and water, carefully applied with a sponge, is perhaps the safest mode. The removal of varnish, however, is not to be thus effected, and we do not advise the use of even spontaneous evaporation for this purpose, as we have found a solvent of varnish in such a case almost as exact as a menstruum if the other sort of the paint [illegible] more likely than from the mere friction. The removal of old varnish is a perilous process requires great caution and experience: there are picture dealers who profess to do the art.

"*Aqua Pura.*"—A correspondent wishes to know how best and most economically to arrange for the filtering of rain-water which in the cistern (a 250 gallon one), so as to be able at any time to draw off the water either filtered or unfiltered.

"[illegible]."—A correspondent asks "if any improvement has been made in pure white cements used in such manufactures." He had some ornamental work made about four years ago, which is now unsightly and worn out. We believe the white cements still continue difficult to handle.—"W. B. W."—"B. W."—"C. F. S."—"W. Y."—"W. S."—"W. C."—"G. G. S."—"A. Y. Z."—"R. S." (we cannot undertake to comply).—"D. F."—"H."—"W. R." "J. E. H." (35 shillings).—"Messrs. B."—"H. S."—"L. W." (yes).—"A Competitor."—"A Cavalry Officer."—"One in the Near."—"Subscriber from commencement" (a palette; chisel and mallet; pair of dividers; and a lyre).

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

METROPOLIS LOCAL MANAGEMENT ACT.—KENSINGTON VESTRY.—WANTED, a thoroughly competent CLERK of WORKS, to superintend all matters connected with the sewage and drainage of the parish, under the control of the surveyor. He must have had practical experience in the construction of sewers, laying drains, &c. and be capable of taking levels, setting out work, preparing plans, and who has held a similar situation in the metropolis. Salary, 150*l.* per annum. No person need apply who does not furnish proof to the above Testimonials to be sent in, under cover, to the Clerk's Office, Vestry-hall, on or before FOUR o'clock, p.m. on TUESDAY next, the 12th FEBRUARY instant, endorsed "Testimonials of Clerk of Works."

REUBEN GREEN, Clerk to the Vestry.

February 7, 1856.

AN ARCHITECT, of good and increasing practice, is desirous of meeting with a Youth, who has an aptitude and taste for drawing, as a PUPIL.—Apply to Mr. COLLINS, Architect, 74, Montague-place, Bedford-square.

TO HOUSE DECORATORS AND UPHOLSTERERS.

A FIRST-CLASS Establishment in or near London willing to receive a respectable YOUTH (with a premium), where he will be properly instructed in the various branches, and have considerable experience in glass work, is desired to communicate by letter with Mr. HENRY HOGUE, Architect, 7, Castle-terrace, Kentish-town.

TO HOUSE PAINTERS, &c.

WANTED, a good THREE-BRANCH HAND, as general assistant in a house decorator's business. Good references as to character and ability as a workman will be required.—Address, M., 6, A. SMITH, 10, Northampton-place, Old Kent-road.

TO BUILDERS' ASSISTANTS

WANTED, as JUNIOR CLERK, an active, well-conducted YOUTH, from 15 to 20 years of age. He must be a good penman, and correct at accounts, and accustomed to the routine of a Builder's Office.—Apply (prepaid) in own handwriting, terms, &c. to A. B. C. D. Office of "The Builder."

WANTED, a respectable Young Man, as CLERK and ASSISTANT to a Builder. He must write a good hand, be accurate in accounts, compe ent to make drawings, take out quantities, measure up work, and make himself generally useful. A large salary will not be given for the first twelve months, as he will have an opportunity of obtaining a thorough knowledge of the business in all its branches. Address with references, stating age and qualifications, and salary expected, to A. Z. Post-office, Chester.—P.S. A member of some Protestant church and a tectotaller, would be preferred.

TO PAINTERS AND GLAZIERS

WANTED, a steady, trustworthy MAN, to take the entire MANAGEMENT of a BUSINESS in the above line, for a widow, where there are two apprentices. Must be a good writer and grainer, and used to a country trade. For particulars apply, by letter, to Mr. BRADBURY, Corsham, Wilts. N.B.—Good references will be required.

TO BUILDERS

WANTED, by a Young Man, aged 28, who has had considerable experience as an Architect and Surveyor, a SITUATION in a BUILDER'S OFFICE. Experience is the object of the advertiser, salary is not to be so much a consideration.—Address, M. X. Post office, King William-street, City.

TO BUILDERS, DECORATORS, AND OTHERS

WANTED, by a respectable Young Man, a SITUATION as COLOUR GRINDER. Understands burning colours, or painting and glazing. Direct G. B. Mr. England, 41, Britannia-street, King's-cross.

TO MASTER BRICK AND TILE MAKERS.

WANTED, by a respectable Young Man, who can do the Engineering work and be handy, a SITUATION as FOREMAN, or by Contract.—Address, L. M. at Mr. Pit's, 29 Hart-street, Covent-garden.

TO BUILDERS, DECORATORS, &c.

WANTED, PERMANENT EMPLOYMENT in Graining, Paperhanging, and Painting. The Advertiser has had several years' Continental education to the country.—Address, E. M. Mr. Wiltshire, Builder and House Decorator, White-horse-road, Hoxton.

TO BUILDERS AND HOUSE PAINTERS.

WANTED, by a respectable Man, a SITUATION as HOUSE PAINTER and GRAINER. In town or country.—Apply, by letter, to W. G. at Mr. Baker's, Builder, Kilburn.

TO BRICK AND TILE MAKERS.

WANTED, a SITUATION as FOREMAN BURNER, or MOULDER, if required.—Address THOMAS SMITH, 31, Basing-lane-road, Great Portland-street, Mary-le-bone.

TO BUILDERS, MASTER BRICKMAKERS, AND OTHERS.

WANTED, a SITUATION, by a respectable Man, as FOREMAN of a BRICKFIELD, who has had practice in all the branches of malm bricks, common stocks, white and red pale bricks and tiles, such as are made in Norfolk. Upwards of thirty years' practice in London and Suffolk. Unexceptionable references if required.—Address, A. B. at J. Boston's, 79, Hackney-road, Shoreditch.

TO BUILDERS, PLUMBERS, &c.

WANTED, by a Young Man, a SITUATION as WORKING FOREMAN, or to manage a three-branch business, the Advertiser having had good experience in all the branches. Can make and estimate for work and has good testimonials. Good reference.—Address, A. Z. 25, West Cumberfield, London.

WANTED, by the Advertiser, who is a thoroughly practical man, a RE-ENGAGEMENT as SHOP or GENERAL FOREMAN, or CLERK of WORKS. He is a joiner by trade, and has several years' experience in carving, a thorough knowledge of the several branches of the building trade. He can take out quantities, measure up work, &c. References of undoubted.—Address, C. B. 1, Beaufort-terrace, Nunhead-lane, Peckham-rye, Surrey.

TO BUILDERS, TIMBER-MERCHANTS, &c.

WANTED, by a Young Man, aged 30, a SITUATION as CLERK, TIMEKEEPER, or otherwise. He is a good joiner, can set out and measure work, and understands accounts. Good references. Salary not so much an object as a permanency.—A. B. 6, South-street, Caledonian-road, Pentonville.

TO BUILDERS

WANTED, by a Young Man who has served his time as a Joiner, a SITUATION in a Builder's Office. Can make out plain drawings, measure up work, &c. would be willing to work at the bench occasionally, and has no objection to the country. Good testimonials.—Address, P. H., 5, Brunswick-parade, Barnsbury-road, Islington.

TO PLUMBERS AND BUILDERS.

WANTED, by a Young Man, aged 22, to IMPROVE himself at the BENCH for one or two years. Willing to fill his time up in painting or glazing, in which he is competent. Good reference given.—Address, W. S. 16, Hatton-street, North-street, Paddington.

TO IRON-FOUNDERS AND ENGINEERS.

WANTED, by a Gentleman of great practical experience, a SITUATION as MANAGER.—Apply, A. B. 57, Aldermanbury, London.

TO ARCHITECTS OR BUILDERS

WANTED, a SITUATION as CLERK of WORKS, SHOP, or general FOREMAN, by an experienced practical man, with excellent testimonials and references. Address, A. B. 29, Gibson-street, Lambeth.

TO SURVEYORS OR BOARDS OF WORKS

WANTED, a SITUATION as FOREMAN of Footways and Roads, or Inspector of Nuisances. The Advertiser has had many years' experience in the above line. Good reference from a District Surveyor. Country not objected to.—Address, G. B. No. 18, Spring-garden-place, Pimlico.

TO BUILDERS AND PLUMBERS.

WANTED, a PERMANENT SITUATION, or JOB, by a young Man, as PLUMBER, who can fill his time up with painting and glazing.—Address, J. M. 29, Bedford-bury, New-street, Covent-garden.

WANTED, a RE-ENGAGEMENT as Out-door FOREMAN. Age 35. Can have six years' reference where last employed.—Address, H. B. 9, Collingwood-street, King's-road, Chelsea.

TO MANUFACTURERS AND OTHERS

WANTED, by the Advertiser, a SITUATION as FOREMAN in a manufactory, or a place to look after machinery or to attend to the manufacturing department, in town or country, or to travel in London for a manufacturing house. A salary and a per-centage on the work manufactured preferred for the former, and a small salary and commission required for the latter. Thoroughly acquainted with town business, and has travelled for a town house two years, and conducted a manufacturing business. N.B.—Acquainted with forge-work and mechanical devices. Security and reference given.—Apply to M. R. care of Mr. Moore, Albert-terrace, Camden-road, Camden-town.

TO ARCHITECTS.

WANTED, by a Gentleman, aged 35, a SITUATION as CLERK of WORKS; can get out plans and quantities, has conducted all building and repairs for the last two years, and is a good draughtsman. Testimonials first class.—J. L. Maddox's Library, Upper Albany street, Regent's-park.

TO ENGINEERS, SURVEYORS, ESTATE AGENTS, &c.

THE Advertiser, who has had considerable experience in extensive estate and town surveying, levelling, draughting, timber measuring, and business in general, is anxious for a RE-ENGAGEMENT, at a moderate salary.—Address, H. H. 117, Crawford-street, Portman-square.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

THE Advertiser is desirous of a RE-ENGAGEMENT, in an Office as above. Can get out fair and working drawings, measure architects' works, and assist in taking out quantities. First-rate reference. Age 26. Salary moderate.—Address, S. B. 17, Pickering-terrace, Westbourne-park.

TO BUILDERS AND CONTRACTORS.

THE Advertiser, a Young Man 26 years of age, requires a SITUATION in either of the above offices. He is a good accountant and draught-man, and has had much experience in public works, a long time in the best references. Address, X. Y. Z. 25, Beaumont-square, Mile-end-road.

TO PLUMBERS AND BUILDERS

THE Advertiser, a good PLUMBER, WANTS constant EMPLOYMENT. No objection to fill up his time with painting or glazing. Can make the three brushes as Foreman, if required. Good references can be given from last employers. Address, A. D. Mr. Montgomerie's, Builder, St. George's-place, Bayswater.

TO ARCHITECTS AND BUILDERS

THE Advertiser, a Practical Man, is in want of a RE-ENGAGEMENT as CLERK of WORKS, or GENERAL FOREMAN. He has had the superintendence of extensive works in town and country. Reference undeniable.—Address, O. Z. Office of "The Builder."

TO ARCHITECTS

THE Advertiser, who is a first-rate Draughtsman, and has a thorough knowledge of detail and construction, is open to an ENGAGEMENT.—Address, G. G. No. 29, Michael's place, Brompton.

TO BUILDERS, DECORATORS, &c.

THE Friends of a Youth wish to APPRENTICE him to an established Builder, Architect, Decorator, Upholsterer, or any branch of these businesses. A liberal premium will be paid to ensure a comfortable home.—Address, with full particulars, to C. B. 12 New Bond-street.

TO PLUMBERS &c.

THE Guardians of a Youth, aged 15 years, wish to APPRENTICE him to the above trade (as indoor apprentice).—Address, B. T. 5, Post-office, Brompton.

TO ARCHITECTS

THE Advertiser, a good Draughtsman and fair Colourist, competent to make working, finished, and perspective drawings in both Gothic and Italian, is open to an ENGAGEMENT.—Address, M. W. Office of "The Builder."

TO ARCHITECTS, BUILDERS, &c.

TEMPORARY ASSISTANCE.—The Advertiser, in common ing practice for himself, is in the habit of assisting several well-known architects, engineers, &c either by preparing drawings and specifications at his own residence, or by any other mutual arrangement.—Address, T. J. R. News-room, 264, High-street, Poplar.

RESPECTABLE ARCHITECTS requiring the aid of a practical CLERK of WORKS, are invited to address B. C. care of T. Campbell, Esq. 55, College-place, Camden-town.

TO ARCHITECTS, &c.

A GENTLEMAN would be glad to meet with an ENGAGEMENT as PRINCIPAL ASSISTANT, or otherwise. He is a good draughtsman, and has had considerable experience in designing in the Italian and Ecclesiastical styles of architecture, and possesses a good knowledge of detail and construction.—Address, ZETA, 13, Canterbury row, Newington.

TO ARCHITECTS, &c.

A YOUNG MAN, with three years' experience in the office of an architect, builder and surveyor in a cathedral town, is desirous of ENGAGING in a similar SITUATION; can produce satisfactory testimonials of character, with specimens of drawing and writing.—Address, F. S. Office of "The Builder."

TO ARCHITECTS OR OTHERS.

A YOUNG MAN, aged 23, the son of a builder, who has a thorough knowledge of drawing, and of practical experience, is desirous of entering into an ENGAGEMENT. Terms moderate.—Apply to H. W. Mr. English's Library, Folkestone, Kent.

A GENTLEMAN, thoroughly and practically acquainted with Counting-house duties, a competent Bookkeeper, accurate Accountant, and able to conduct an extensive correspondence, is desirous of EMPLOYMENT in a respectable business, at a moderate salary.—Address, P. Office of "The Builder."

TO PLUMBERS AND BUILDERS

A YOUNG MAN wishes for further experience in a good PLUMBING SHOP. Willing to fill up time, if required, in painting, sash or leadlight glazing, in which branches he is perfectly competent.—C. G. 11, Clarendon-street, Euston-square.

TO BUILDERS AND OTHERS.

AN experienced BUILDER'S CLERK is open to a RE-ENGAGEMENT.—References unexceptionable.—Address, A. B. Mr. Cowley, Upper Sydenham.

TO ARCHITECTS.

AN Architect, established in a midland county town, whose practice is principally in ecclesiastical work, being about to proceed to China, wishes to DISPOSE of his PRACTICE. His house and offices, being eligibly situate for business.—Address (postpaid) T. L. W. Office of "The Builder."

PARTNERSHIP.—Capital required, about 400*l.* Any party having this amount at command, and who is either a good draughtsman or practical builder, may join the advertiser in business wherein a certain independence can be made.—Address, with real name, to A. B. 7, the Grove, Chester.

TO ARCHITECTS

A GOOD DRAUGHTSMAN, who understands the ordinary routine of an Architect's Office, and is capable of working full and perspective drawings, desires an ENGAGEMENT.—Address, R. L. M. Graham Library, 150, Cheapside.

TO ARCHITECTS

AN experienced ARCHITECTURAL COLOURIST undertakes the COLOURING of PERSPECTIVE, and other DRAWINGS, of an Office, by the year, or otherwise, on reasonable terms. Specimens produced. Address, to B. C. Mr. Plummer's Library, Theobald's-road, Bedford-row.

A PLUMBER wishes to meet with a PERMANENCY as PLUMBER, or THREE-BRANCH HAND. Can give reference as to character.—Address, T. N. 20, Roupell-street, Cornwall-road.

TO MASTER MASONS, &c.

A STEADY MAN from the country requires a SITUATION. Is an experienced Letter Cutter and Writer, both plain and ornamental, on stone, marble, &c. and would make himself useful in any branch of the business to the utmost of his endeavors. Is a good draughtsman and accurate measurer.—Address, A. Z. 8, Evans-street, Upper North-street, Poplar, London.

TO NOBLEMEN AND GENTLEMAN, PROPRIETORS OF ESTATES

A YOUNG MAN, a SURVEYOR and BUILDER, solicits an ENGAGEMENT as AGENT, to superintend erections and general repairs, collect rents, &c. Security given. Satisfactory testimonials and references may be relied on. Address, A. B., 4, Regent-terrace, West-street, Croydon.

TO BUILDERS

AS MANAGER of a large JOBBING BUSINESS, or PRINCIPAL CLERK, the Advertiser OFFERS his SERVICES, being thoroughly conversant with the duties of either. The Advertiser has had very extensive and responsible experience, and can produce satisfactory references and testimonials as to character, ability, and security, if required.—Address, A. B. Retreat Cottage, Dorking, Surrey.

TO PLUMBERS AND BUILDERS.

A GOOD PLUMBER wants EMPLOYMENT. No objection to fill up his time at painting or glazing. Good reference can be given. Direct to T. S. 8, New Church-road, Well-street, South Hackney.

ROYAL POLYTECHNIC.—The Seventh Course of Monday Evening Lectures to the Industrial Classes has commenced. Lecture on the Poisons by Arsenic, by J. H. Pepper, Esq. daily, at 4 and 9. The Poison, and the Tests used for its detection, exhibited in the Oxy-hydrogen Microscope.—The Second Part of the Diseases of Scotland the Sailor, with new and beautiful Dissolving Pictures designed and painted by H. G. Hine, esq. and Description, with Songs, by Lewis Hurrey, esq.—Diseases of the Potato, by Dr. Phelps, Fire, and Combustion, by J. H. Pepper, Esq. and on the New Steam Electrical Machine, by Mr. Wylde.—2,000 Models and Works of Art on view.—Admission, One Shilling. Children and Schools, half price.

TO ENGINEERS, &c.—As it is proposed to water the streets of Brighton by means of sea water instead of fresh, furnished by the Water Company, which costs the Town for the past 4 years about 2*l.* per annum, there is upwards of 15*l.* for the use of the water, gratis for the same period of time, and as it has been found that the supply of fresh water is totally inadequate for the domestic and street purposes, improvement in the machinery who would like to SUPERINTEND their SERVICES towards making the necessary preliminary PLANS, &c. with the prospect of being permanently engaged, on the formation of a company, will please address themselves to Mr. Councillor TENNANT, Queen's-road, Brighton, when detailed information will be given.

Brighton, 29th January, 1856.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea Bridge, at the following prices, viz.:—Grey Stocks, 25*s.* per thousand; Grizzles, 20*s.* per thousand; Rough Stocks, 20*s.*; Place, 16*s.*—Terms, cash on delivery.—Apply to Mr. GAMBLE, 20, Sidney-street, Kent-road.

BRICKS for SALE.—250,000 capital Place Gothic Bricks, at 16*s.* per thousand, to be taken off at the Clearance Cash on delivery.—Apply to Mr. H. H. COLLINS, Architect, 34, Montague-place, Bedford-square.

Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON BRICK, LIME, and CEMENT MERCHANTS, SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that articles of this manufacture can only be obtained at his Works, Mill wall, Poplar, or at his Warehouse, Praed street, Paddington.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to Trade the first Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend the Special Quick-Set Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLWARK, 80, Old Broad street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to any London by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for succoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties, that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that the cement can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade in general that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster

DAVIES and NORMAN, Agents

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), and 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, is 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Woolwich-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 30, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf (as above), since also to keep a LARGER STOCK of the above valuable HYDRAULIC LIME, always on hand, that their orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations should be given a few days before required.

GIBBS, CANNING, and CO.'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, picked stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

LIME.—Gray Stone, 9s. 6d.; Chalk, 8s. per yard; at THOMAS J. COLE'S Depôt, Peckham Canal.

Sand, Cement, Slates, Tiles, and Drain Pipes, supplied at equally low rates. Terms, cash. Builders' material landed, wharfed, and carted.

TO CEMENT and PLASTER MANUFACTURERS and OTHERS.—TO BE DISPOSED OF, a CEMENT STEAM-MILL, with wharf, two kilns, plaster oven, and extensive cellaring and warerroom, situated in an increasing town, on the South Coast Railway. The premises are held under a lease, with power of purchase. As a knowledge of the business is not needful, the concern is well worthy the attention of an active man, with small capital, who would devote the whole of his time to its extension. Apply at 32, Cranbourn-street, Leicester square

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.

JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale Business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms. Application either at Harwich or to his Agent, GEORGE MORRIS, 30, New Ormond street, Queen-square, London.

REMOVED FROM CRITCHILL-PLACE, NEW NORTH-ROAD HOXTON.

BRICK MOULDS (improved), Steel-face Stocks and Plates, with Screw Stock Pegs, used four seasons. Various sizes kept on hand. References where in use. Brick Mill Work and Implements. J. LEACH, Millwright and Engineer, 9, St. Peter's-square, Hackney-road, London.

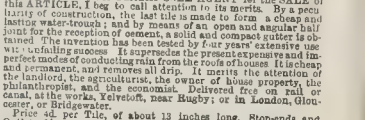
DEEP-RED RUBBING BRICKS
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 8, ADELAIDE-PLACE, London-bridge.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the Bricklayers' Arms. Intending purchasers to favour him with a visit, in order to inspect his stock and judge for themselves.



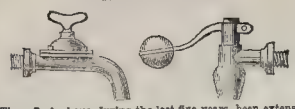
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 30,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power. One man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the EREC-TION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.



BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES, either old or new whether of thatch, slate, or tile, and other structures. Sole Agent, J. B. LAWES, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Kelvedon, near Hadley; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, WHARF, Macclesfield street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactories known so long as "The Potteries," Tunstall, Staffordshire, as the first of the kind in the world.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—
LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

2½ „ long	3 3		1 14 0
3 „ ditto	3 6		2 8 0
3½ „ ditto	3 6		2 12 0
4 „ ditto	3 6		3 3 0
2½ „ short, with 15 feet of lead pipe attached, ready for fixing			2 14 0
2½ in. long ditto ditto			2 18 0

The short-barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in washhouses with soft water from underground tanks, or in hot. forcing, &c. plant houses; they may be fixed, when desired, under the stage. May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

PORTABLE STEAM-ENGINES and
PUMPS kept in Stock for Hire at reduced Prices. H. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM PUMPING ENGINES.—
PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors, John's-place, Holland-street, Southwark, London.

PUMPING and WINDING ENGINE.—
TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 99, Blackfriars-road.

A COMPACT 4-horse HORIZONTAL
ENGINE, boiler and fittings complete, in good order, and ready for fixing. Lowest price, 85l.—Address, BLYTH (Brothers), Baldwin's-place, Gray's-inn-lane, Holborn.

STEAM-ENGINES on SALE, new and
second-hand, from one to twenty-horse power; a ten-horse Jukes's smoke-burner, and a variety of machinery consisting of boilers and tanks, three throw pumps, lathes, planing and drilling machines, screw-presses, &c. &c.—Apply to D. W. ASH, 187, Southwark-bridge-road, Newington-causeway, where the above may be seen.

N.B. Machinery of all kinds purchased.

STEAM-ENGINE for SALE, a five-horse,
high-pressure Steam engine, with about 20 feet of shafting and riggers, by Robinson and Son, late Bramah.—Apply on the Premises, the Statue and Iron Foundry, Lower Belgrave-place, Pimlico.

DRAUGHTS ROUND DOORS and
WINDOWS. — GREENWOOD'S PATENT INDIA-RUBBER STOPS, to supersede list or leather, for the purpose of keeping out dust and draught round doors, windows, closets, show-cases, &c. making the same air-tight. Price 6d. per foot. Spring Slides for bottoms of doors, 4s. each.

JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London-bridge.

DRYING and SEASONING PROCESS by
CURRENTS of STEAM HEATED, or FIRE HEATED AIR, (SYMINGTON'S and DAVISON and SYMINGTON'S PATENTS).—This new, important, and valuable Steam-Heating Apparatus, is simple in construction, strong, safe, and durable; capable of repair by any ordinary smith or engineer, and can be put up or removed with great facility. It can be worked with the utmost safety, and with economy, as either steam, direct from the boiler, or exhaust steam from a high pressure engine, will answer the purpose for producing a temperature of about 200 degrees. When a higher temperature is needed, the improved fire-heating apparatus can be supplied. The drying process is used with the greatest advantage for seasoning wood, drying printed and other papers, &c.; and for all purposes where a perfect and even drying is required. The heated current is rapid, continuous, and con trollable.—For further information, references, &c. apply to th Patent Desiccating Company, No. 17, Gracechurch-street, London.

THE PERMANENT WAY COMPANY,
26, Great George-street, Westminster, have now published a Second Edition of their CIRCULARS, which may be had post-free upon application. Among other recent important Inventions, the Company beg to call particular attention to Prince's Patent for Casting Railway Chairs, Pole's Patent Improved Fish Joint, and Dr. Boucherie's improved Process for Preserving Sleepers, Fencing, Telegraph Posts, &c. from decay.—Every information may be had upon application to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

HANDS'S PATENT ECONOMISING
KILN is the only simple and effectual mode to use the heat, for drying moist moulded clays, sound at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

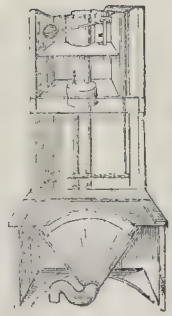
HANDS'S PATENT is the only simple and
certain remedy for the SMOKE NUISANCE; it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TARPAULINS for COVERING ROOFS
during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO BE SOLD, cheap, a STEAM STONE-
SAWING FRAME; also a very powerful Hydraulic Press, by Bramah, with pump, complete; also some first-rate Steam Boilers and Patent Mortising Machines.—Apply to JOHN FRANCE, Engineer, 30, North Wharf-road, Paddington.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Pan, 3s. 6d.



Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air tight Valve.

Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

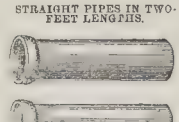
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

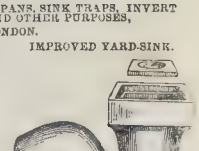
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

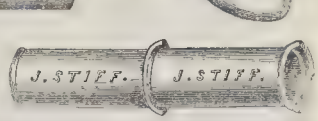


JAMES STIFF,
MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,
LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

IMPROVED WATER-CLOSET PANS AND TRAPS, WHITE INSIDE.



Pan, 3s. 6d. Trap, 2s.



STRAIGHT PIPES IN TWO-FEET LENGTHS.

IMPROVED YARD-SINK.

HALF-SOCKET PIPES, in 2 feet lengths, at usual prices, by the use of which, Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin Dock head, Bermondsey; Denyer's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD COCK'S 94, Wardour-street, Oxford-street. Drawings and List of Prices will be forwarded free on application.

AYLESFORD POTTERY COMPANY,
BELVEDERE-ROAD, LAMBETH.
MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dock-yard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

£5,000.—TO BUILDERS, &c.—This sum to be LENT on Mortgage, of long leaseholds, freeholds, &c. Any security secured. Applications personally, between the hours of TEN and ONE o'clock, to Mr. H. H. COLLINS, 34, Montacue-place, Bedford-square.

LOANS from 25*l.* to 1,000*l.* upon approved personal or other security, repayable by easy instalments extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy. 1*l.* per cent.
CHARLES JAMES THICKE, Resident Secretary.

METROPOLITAN LOAN COMPANY, Established 1844.
1, CRAVEN-STREET, STRAND, LONDON.
Loans are advanced in amounts varying from 1*l.* to 5*l.* repayable weekly or otherwise, as may be agreed on, at a discount of 25 per cent for twenty-five weeks, and 12 per cent at 8 per cent.—Forms may be had, price 3d.; if by post, three postage stamps to be enclosed. ROBERT NORTON, Secretary.

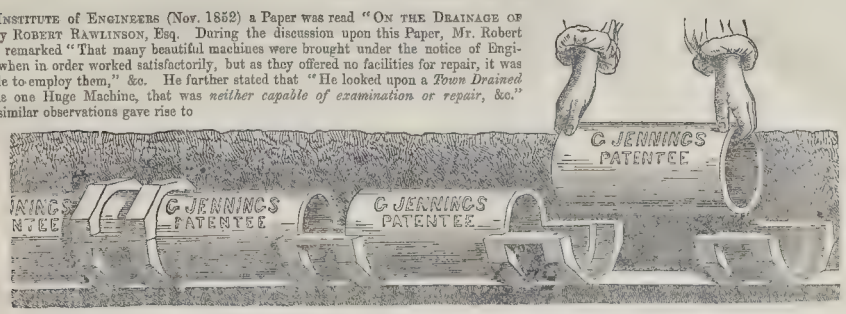
TO OLD MATERIAL DEALERS. — The MATERIALS of two OLD HOUSES, upon Tower-hill, TO BE SOLD by TENDER.—Particulars may be had at 11, Nag's Head Postern-row. The highest Tender will not be necessarily accepted.

TO DRAIN-PIPE MAKERS.
WANTED IMMEDIATELY, 10,000 9-inch RED GLAZED SOCKET-PIPES, to Farnborough Station, South Western or South-Eastern Railway.—Address to H. BIRCH, Contractor, Farnham, Surrey.

THE PATENT ARCHITECTURAL POTTERY COMPANY, Nos. 1, 2, and 3, KING-STREET, MANUFACTURERS of GLAZED and COLOURED, MARBLED and VENETIAN, HOLLOW and SOLID BRICKS, and TILES and PANELS for DADOES. Specimens of these are for the exterior of public buildings, mansions, streets, and cottages, and for the interior of halls, conservatories, schools, hospitals, barracks, &c. &c. They are of a beautiful buff stone colour, the surfaces highly glazed, so that the dust cannot lodge, so as to render them thoroughly architectural. The glazed surface makes them impervious to wet and dirt, and supersedes the use of cement and paint. The colour alone keeps them clean, and there are no joints, they are hollow, and are so fixed as to form a cavity for air to circulate between the wall and the brick, and give the wall a beautiful appearance. The Venetian bricks serve to dress the window, doors, string courses, &c. &c in the best possible taste. Various sizes, shapes &c. are made according to order. The quarries are of the usual sizes, and in such colours as may be approved for Parisian or diamond figures, compartments for floors, &c. For a sight of patterns, and for requisite information, apply to Mr. PHILPOT, Belvedere-road, Lambeth, ; or to the Company, at their Manufactory, Pimlico.

WILLIAM GILBERT, Tividale Pottery and Blue Tile Works, near Tipton, Staffordshire. The BLUE WARE SANITARY PIPES made by W. GILBERT are the only GLAZED Pipes of the kind manufactured in England. They are of a pure blue colour, and very durable, being subjected to great heat in the kilns before they are finished. They are as smooth and straight as it is possible to make pipes, will bear a greater pressure, and endure in the drains a longer term than any other pipes. They are also made much stronger than the body of the pipe, so as to resist all unequal pressure, shrinking, and fracture. These pipes are cheaper than stoneware, and may be had in 2 feet lengths, of 2 in. 3 in. 4 in 6 in. 9 in 12 in. 15 in. and 18 in. bore, with all sorts of necessary junctions, traps, bends, and sink grates to match. For the immense variety of other articles manufactured at these works, such as Terra cotta fire brackets, trusses, vases, flower pots, busts, statues, pedestals, &c.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.
FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulic engineering.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.



VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of GLAZED STONEWARE PIPES (to work in connexion with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware and Earthenware. Also MANUFACTURER of close and dovetail Cement and Plaster of Paris Moulds for Blocked Pipes,

TO ENGINEERS, ARCHITECTS, SURVEYORS, AND OTHERS, INTERESTED IN EFFICIENT DRAINAGE.

At the INSTITUTE of ENGINEERS (Nov. 1852) a Paper was read "ON THE DRAINAGE OF TOWNS," by ROBERT RAWLINSON, Esq. During the discussion upon this Paper, Mr. Robert Stephenson remarked "That many beautiful machines were brought under the notice of Engineers, that when in order worked satisfactorily, but as they offered no facilities for repair, it was not desirable to employ them," &c. He farther stated that "He looked upon a *Town Drained by Pipes* as one Huge Machine, that was *neither capable of examination or repair*, &c." These and similar observations gave rise to

JENNINGS'S PATENT DRAIN-PIPES.

A drawing was made similar to the above, and submitted to Mr. Charles May, and Mr. William Carpmael, Civil Engineers, for their respective opinions. Their report being satisfactory, a Patent was taken. The same drawing was afterwards shown to Thomas Hawksly, esq. C.E., W. Haywood, esq. and Professor Hosking, all of whom expressed themselves much pleased with the invention, Mr. Haywood remarking,—"the work of supervision would be much lessened," and Mr. Hosking, "that the objection to Pipe Drainage was removed." These opinions have since been practically confirmed, and for the last six months GEORGE JENNINGS has not availed himself of any mechanical journal, to extend the publicity of his various sanitary inventions, having had as much business as he could satisfactorily execute. For the same reason he would have remained silent, but having seen it publicly stated that the old-fashioned Drain-pipes, "IF LAID WITH ORDINARY CARE, DO NOT NEED EXAMINATION," he thinks, in justice to his Patented Improvement in Pipes, he ought to say a little about Pipes in general.

First.—He would allude to the laying of drain-pipes "with ordinary care." When laying or entering one socket or half-socket pipe into another, can the workman or superintendent be certain that the pipe so entered INTERNALLY carries the same line as the one previously laid?

Secondly.—TO MAKE A PERFECT JOINT (query, if made at all at the bottom) the contractor's workman MUST DISTURB sufficient ground UNDER EVERY PIPE to pass the stopping material UNDER and AROUND each joint. If the joint be well stopped (and it is most important it should be) with cement, mortar, or clay, can the workman or superintendent insure, internally, a joint free from obstruction, although a BRUSH, A MOP, OR AN OLD SACK, may have been passed up and down the pipe? All persons who have considered the question of pipe-drainage in detail, will admit that the efficiency and durability of the same depends greatly on the soundness of the joints, inasmuch as any loss of sewage AT THE JOINTS is a loss of SCOURING or FLUSHING POWER within the pipe; hence arises the great deposit found in pipes generally. Again, as regards pipes laid in public or other buildings, any "escape of sewage at the joints must necessarily be MOST INJURIOUS TO HEALTH, as well as destructive to the permanency of the work, as all heavy sewage, wanting the power of WATER LOST, remains, and ultimately stops the drainage.

Thirdly.—Are not a line of the old-fashioned pipes, when once laid, "as a sealed book?" No examinations can be made, no stoppages removed, or junctions introduced, without breaking up and destroying one or more pipes,—thus saturating the excavation, and rendering it impossible to properly restore the drainage disturbed.

The drains of any building ought to be as permanent as the foundations they pass under, and to assert "that pipes do not need examination," is no proof that they may not require it. A ship may never be lost, but a prudent owner will insure; and that article will be found best in the end, that offers the greatest facilities for examination and repair. Again,—to say "that pipes do not need examination," is a fallacy. Instance the "examinations" carried out by order of the Metropolitan Commissioners of Sewers, by their engineers, Messrs. Lovick, Cooper, Roe, Donaldson, and Grant, where in every instance, after opening the ground, the pipes, offering no means of examination, were of necessity obliged to be BROKEN INTO to ascertain the amount of deposit in them.

The patronage "JENNINGS'S DRAIN-PIPES" have received, and still are receiving, is a proof that engineers, architects, and surveyors, who have in their specifications described them, and the builders who have employed them, consider that Local or Domestic circumstances may render the introduction of Junctions, or the examination of pipe-drains necessary,—both of which may be accomplished by the adoption of Jennings's Pipes, WITHOUT IN ANY WAY DISTURBING THE INVERT OR GENERAL DRAIN. These Pipes can be laid in HALF THE USUAL TIME, and GOOD WORK INSURED. The workman has only to bed the chairs to the proper fall and right distance apart, on concrete or otherwise, according to the nature of the soil they are laid in. This done, and the rebates of the chairs filled with cement, the Pipes have only to be dropped into the rebates and pressed down to the line of chair, the distance between each Pipe (see illustration) allowing the workman to properly strike up the joint of the invert, and the engineer or superintendent TO SEE THE WORK IS PROPERLY DONE before allowing the saddle-pieces to be put on.

From the foregoing description, it will be seen that the laying of the pipe and the making of the joints is done at one and the same time, and the drain mechanically completed, without the disturbing the ground under the pipes, or the application of the BRUSH, MOP, or OLD SACK, referred to. And should it be necessary AT ANY TIME to examine a drain so laid, the saddle-pieces afford every facility; and the same applies to the introduction of junctions: a workman has only to remove a plain saddle, and exchange it for one having a junction in it of the required size. These pipes, although so recently invented, have been approved and adopted by Colonel Jebb, at the Model Prison, Pentonville, Penitentiary, Millbank, Brixton, and Fulham Prisons, and the New Prison, Chatham; by the Authorities of the Dockyards and Arsenal, Woolwich, Deptford, and Chatham; the Barracks and Schools, Canterbury, and the Government Works, Enfield Lock; by the Surrey and Wilts County Magistrates; by the Town Councils of Oxford, Yeovil, and other towns; by Chas. Reeves, esq. for Police Stations and other Works; by the Guardians of the Strand and eighteen other Unions; by the Directors of the Equitable Gas-works, Thames Bank; by Sir J. Paxton, for the Crystal Palace and other Works; by T. H. Wyatt, esq. for several important Works; by the late Mr. Mason, for the London Hospital; by Edwin Nash, esq. for the Schools at Sutton, &c.; by William Moseley, esq. for the New City Bank, &c.; by W. B. Gringel, esq. for several Works in Bristol; by the Committee and Architect, W. B. Moffatt, esq. for the Idiot Asylum, Reigate; by Wm. Tite, esq. for the Necropolis Station; by Edward I'Anson, esq.; Professor Hosking; James Howell, esq.; Messrs. Hunt and Stephenson; John Lister, esq.; H. Dawson, esq.; Joseph Jennings, esq.; J. Noble, esq.; J. Edmonston, esq.; by Messrs. Young and Co. ship-builders; Messrs. Elliott, Watney, and Co.; and many other firms.

GEORGE JENNINGS returns his thanks to those gentlemen who have so largely described his various inventions in their specifications, and would here observe, that his only object is to promote the introduction of SANITARY IMPROVEMENTS, BEARING THE STAMP OF COMMON SENSE. He wishes to offer no factious opposition to any particular trade or interest, but is prepared to encounter all and everything for the cause he advocates.

The Pipes above illustrated and referred to, with all the advantages they offer, are the SAME PRICE AS CHARGED BY THE RESPECTABLE LONDON POTTERS.

The Show-rooms now built on Jennings's Wharf, Holland-street, Blackfriars, will be open in March next, for the Exhibition of Sanitary Inventions, suitable for EVERY CLASS OF BUILDING, PUBLIC OR PRIVATE. In the meantime, Illustrated Particulars and Prices of JENNINGS'S Self-acting and other Watercloseets, Urinals, Lavatories, Pumps, Sluices-Valves, Fire and other Cocks, Gully-traps, Shop-shutter Shoes, Earthenware Drain and Soil Pipes, &c. &c. can be had free, on application, or by post, on enclosing two stamps to

GEORGE JENNINGS, SANITARY ENGINEER, GREAT CHARLOTTE-STREET, BLACKFRIARS.

N.B.—Illustrations and Particulars of FOUR OTHER PATENTS FOR SANITARY PURPOSES just taken by GEORGE JENNINGS will appear in the course of a week. In the mean time they can be seen at the Factory, as above.

GIBBS, CANNING & CO.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FLUE BRICKS, Vitrified Blue Bricks as used at Messrs. Chubb's Iron Works, Wednesbury, Staffordshire, for Mr. Ashwin, at CHARLES RICHARDSON, No. 8, South Wharf, Paddington, London.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantity, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern Railway Yard, York-road, King's-cross.

SUPERIOR STONEWARE GLAZED SOCKET PIPES of a quality not to be surpassed — E. and W. STURGE respectfully invite attention to their very superior Socket Pipes, which they are enabled to offer at a much lower price than the trade, viz. 25 per cent. less than the usual prices. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Stills, &c. all at low prices. Quay Road, Bridge Wharf, City road.

N.B. A small extra charge is made upon goods required to be delivered south of the River Thames.

THE STAFFORDSHIRE SANITARY POTTERY COMPANY.

Proprietors, E. F. WINSTONE and Co. — Manufacturers of glazed stoneware pipes and traps for drainage purposes, also vitrified and glazed sewer pipes, 100, Great College-street, Camden-town, London, late of Pickering-street, City road.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, [illegible] a small or quantity of water than is usually needed, and effectually prevents [illegible] RAILWAY STATIONS, HOTELS, PUBLIC BUILDINGS, and [illegible] establishments. Also HIGH PRESSURE powerful [illegible]

PATTEN, 22, Old Fish street, near St. Paul's, London. Price [illegible] perfect action guaranteed.

SALES BY AUCTION.

READING, BERKS.—To Railway Contractors, Builders, Brewers, Coal Merchants, Carriers, and Others.

MR. WILLIAM BROWN will SELL by AUCTION, on MONDAY, the 11th day of FEBRUARY, 1856, at TEN o'clock precisely, at the MIDDEN STABLES, near the Great Western Railway and Reading and Regate Railway Stations at Reading, FIFTY most active powerful English CART HORSES, in good working condition, the property of Mr. R. Brotherhood, now offered to the public in consequence of the New Line west of the Reading Station being nearly completed. The Auctioneer begs to draw the particular attention of his friends and the public to the superior Stock, which has been selected with great care and at high prices by Mr Brotherhood who's well-known judgment has given such general satisfaction at previous sales. Amongst the Stock will be found Five very promising well-bred Cart Colts, rising three years old, which have never been worked. The Horses may be seen at work on the Line near the Reading Station, daily (Sunday excepted), and on the morning of sale at Mr. Hope's Stables, Great Western Tap, close to the Stations of the Two Railways.—Catalogues may be had four days before the time of sale (or sent by post), on application to Mr. Brotherhood, Railway Works, Chippenham; or at the offices of the Auctioneer, 154, Friar-street, Reading. Conditions of Sale as usual.

TO COACHBUILDERS, COACH SMITHS, IRONMONGERS, AND OTHERS.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on TUESDAY, FEBRUARY 19, at ELEVEN, on the PREMISES, Gerrard-street, Oxford-street, in lots, without reserve, SEVENTY TONS IRON and STEEL and IRONMONGERY, including about thirty tons BC bars assorted, twenty tons Staffordshire bars, eight tons coach-spring steel (Oxley's and Turton's), five tons best cast and double shear steel, two tons bolts and nuts, 20 cwt. as coach-bolts, assorted; 300 dozen files and rasps, 100 bags wrought and cut nails, one ton best Derby town clout, one ton snap head rivets, 50 gross wood screws, five tons orange coil and wheelwrights' chain, two tons burrs, washers, and bolt rings; sixty pairs cart arms, coal patent axles, coach-springs, coach ironmongery, double-purchase crab, builders' ironmongery, and a general assortment of ironmongery. To be viewed on Monday previous to the Sale, when Catalogues may be had on the Premises; and of Messrs. FULLER and HORSEY, Billiter-street, City.

TELEGRAPH WIRE

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on MONDAY, FEBRUARY 25 at TWELVE, at the AUCTION MART, Bartholomew-lane, London, in lots, without reserve, EIGHTY MILES of TELEGRAPH WIRE, insulated, No. 16 copper wire, in No. 5 suits-percha casing, manufactured by the Gutta-Percha Company, City-road; adapted for subterranean or submarine telegraph, and now lying at Cotton's Wharf, Tooley-street.—To be viewed at any time, by order, which, with catalogues, may be had of Messrs. GODDARD and EVRE, Solicitors, No. 101, Wood-street, Cheapside; or of Messrs. FULLER and HORSEY, 13, Billiter-street, City, London

Fine large Elm, Sycamore, useful Ash, Beech, and Oak Timber, with top, lop, and lady, standing on the Hungerford-park Estate

MR. ALEXANDER DAVIS is honoured with instructions from Major Wilks, to SELL by AUCTION, at the CROWN HOTEL, Hungerford, Berks, on FRIDAY, the 15th day of FEBRUARY, 1856, at THREE o'clock in the Afternoon, viz.—Thirty-four Elm Trees (some of very large size), forty-seven fine Ash, two large Sycamore, twenty-four Beech, thirty-seven fine Oaks, and two hundred and eight small Oaks, standing as above: they may be viewed by applying to Mr. JAMES HOPKIN, the keeper on the Estate, of whom Catalogues can be had; also at the Place of Sale; by post, on application; and of the Auctioneer, Valuer, and Estate Agent, Market-place, Newbury, Berks.

WESTMINSTER.—Surplus Builder's Stock and Effects.

MESSRS. EVERSFIELD and HORNE are instructed by the proprietor, in consequence of the senior partner retiring from business, to SELL by AUCTION, on the PREMISES, Regency-street, Westminster, on TUESDAY, the 19th of FEBRUARY, at TWELVE for ONE, the SURPLUS STOCK-IN-TRADE, comprising a large quantity of dry deals, planks, and battens; pitpared floor battens, dry prime planks, seasoned wainscot, useful boards and quartering, old doors, sashes and framing, Portland stone, a copper skylight, &c. Also the valuable SURPLUS PLANT, comprising two young powerful draught horses, three carts, stone truck, blocks and falls, scaffold poles, boards, cords and putlogs, wheeling-planks, work benches, barrows, and mortar-boards; a very excellent joinery bench, with ten drawers, and other effects.—May be viewed one day previous, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Stock Exchange.

ON THE BANKS OF THE REGENT'S CANAL BASIN

MR. LEREW will SELL by AUCTION, on the PREMISES, Edward-street, Regent's-park, on TUESDAY, FEBRUARY 12th, at TWELVE, 2,500 dry stock PLANKS, DEALS, and BATTENS; twenty-five loads of hardboard yellow pine TIMBER; five loads of Arbroath plank, quartering, cut stuff, &c.—May be viewed the day before the sale; when catalogues may be had on the Premises, and of Mr. LEREW, Carpenter's-yard, Hampstead-road.

TO BUILDERS, CABINET AND PIANOFORTE MAKERS, AND OTHERS.

MR. LEREW is instructed to prepare for SALE by AUCTION, on the PREMISES, Nos. 41 and 42, Union-street, Somers-town, on MONDAY, FEBRUARY 18th, at ELEVEN for TWELVE, on account of the number of lots, about 4 cwt. of MAHOGANY in logs, logwood, and planks; 1,000 feet of wide pine board, 80 four-panel and sash doors, and other prepared work; mails, ironmongery, ranges, stoves, workbenches, and effects.—To be viewed two days prior to the sale, and catalogues had on the Premises; and of Mr. LEREW, Carpenter's-yard, Hampstead-road.

POSTPONEMENT OF SALE.—To Contractors, Builders, and Others.—North Hyde, Middlesex, near the Southall Railway Station.

MR. HARDING begs respectfully to announce that the SALE of 400,000 last STOCK BRICKS, of an excellent quality, advertised to take place on Wednesday, the 13th inst., is POSTPONED until next week, the day and hour to be duly published in the local papers; and that the whole of the valuable Stock will be SOLD by AUCTION, in the manner previously mentioned, about 100,000 more, lying on the stone field, will be included in the sale. They may be viewed until the auction takes place, by application to Mr. NEWELL, Boat-owner, Bulls-bridge, near Hayes, Middlesex; also of Mr. Flaxwood, at the Brick-field; or at the Auctioneer's, Hope Cottage, New Brentford, Middlesex.

IMPORTANT TIMBER SALE.—CONSERVATIVE LAND SOCIETY.—St. Margaret's Estate, Twickenham.—The valuable fall of TIMBER on the above Estate, [illegible] Materials, to be SOLD by AUCTION, by [illegible] Mr. Robins, at the Mart, on WEDNESDAY, the 20th inst., at TWELVE for ONE o'clock precisely, in the following lots, unless previously disposed of by private contract:—

Lot 1. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
2. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
3. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
4. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
5. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
6. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
7. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
8. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
9. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
10. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
11. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
12. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
13. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
14. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
15. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
16. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
17. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
18. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
19. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
20. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
21. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
22. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
23. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
24. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
25. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
26. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
27. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
28. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
29. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
30. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
31. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
32. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
33. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
34. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
35. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
36. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
37. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
38. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
39. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
40. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
41. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
42. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
43. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
44. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
45. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
46. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
47. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
48. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.
49. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.

100. Two Elm trees, measuring 10 feet 6 inches in girth, and 60 feet in length.

TO BUILDERS.—TO BE LET, on a [illegible] Building Lease for ninety-nine years, [illegible] Hollis's Estate, in Bermondsey-street, Bermondsey, with a frontage of 41 feet 6 inches, by the depth of 90.—Further particulars may be had of Mr. Mabbett, Estate Agent, Queen-street, Mayfair, Berkeley-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 5, Chancery-lane.

FREEHOLD GROUND, CHANCERY-LANE and FETTER-LANE.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 26th of FEBRUARY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking, on Building Lease for Eighty Years, certain PLOTS of GROUND, situate at the south-west end of Chancery-lane, and the south-east end of Fetter-lane. Further particulars may be had, and plans seen, on application to Mr. HAYWARD, Engineer to the Commission, at these Offices, in the Guildhall. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for approval; and do not bind themselves to accept any proposal, unless deemed advantageous.

JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, January 2, 1856.

HARROW.—FREEHOLD LAND.—TO BE SOLD, 100 ACRES, in a ring fence, and several other eligible plots of FREEHOLD LAND, at a moderate price, contiguous to the Harrow and Stanmore Railway, surrounded and intersected by capital roads. Residents are entitled to the privileges of the Harrow School, and the London and North Western Railway Company offer to persons building houses of approved elevation, worth 50l. per year each, a free first-class pass between Harrow station and Euston-square, for eleven years. There is an abundant supply of excellent water, and every superior brick-earth on the land.—Apply to WILLIAM B. COOPER, Esq. Solicitor, 3, Verulam-buildings, Gray's-inn.

BUILDING-GROUND, Clerkenwell, in the direct line of the new street from Farringdon-street to Islington.—GROUND TO BE LET for third-rate houses, with or without workshops and back entrances (a capital site for a public-house). To see plan and particulars, inquire at the Office of T. RANDALL, Esq. Architect, 38, Great Winchester-street, City, between the hours of TEN and FOUR o'clock.

TO BE LET, SEMI-DETACHED VILLAS, in immediate neighbourhood of Victoria New Docks, and in parish of Plaistow. Each house contains two parlours and breakfast-room, three bed-rooms, kitchen, scullery, pantries, and W.C. They are completely fitted up with every convenience,—coppers, water, stoves, and blinds. They are partially stuccoed and varnished, and all are papered with newest patterns. They are ready for immediate occupation, and, in consequence of the failure of the builder, they will be let for the low rent of 22l. per annum. Taxes are very moderate, and railroad and omnibus conveyance within easy distance. Apply to Messrs. WM. G. and E. HABERSHON, Architects, 38, Bloomsbury-square, London; at whose Office views and drawings may be seen.

TO CAPITALISTS, BUILDERS, and SPECULATORS.—The valuable BUILDING ESTATE of "Oak Bank," surrounded on all sides by good roads, having extensive frontages to the river Itchen, and fine views of the town of Southampton, the docks and shipping, and Southampton Water, is TO BE LET on Building Leases for 1,000 years from the present proprietor. This valuable building property is within a few minutes' walk of the docks and town of Southampton, and being without the municipal boundary, the rates and taxes are almost nominal. Its peculiar formation permits it to be made available for dwellings suitable to every class.—Further particulars will appear in a future advertisement; and the plans may be viewed and full information obtained on application to Mr. ALFRED G. DAVIS, Architect, Surveyor, and Land Agent, Offices, Onslow-road, Southampton: on and after the 25th day of February.

WHARF and STEAM SAW-MILLS TO BE LET.—The extensive premises, known as the "ABBEY WHARF," King's-road, Reading (with long frontage towards the Kennet; and powerful CRANE), on which a large timber trade has for many years been carried on. Also, the powerful, newly-erected STEAM SAW-MILLS, now in full work; with counting-house, large warehouses, stabling, &c. The trade is capable of being increased; and the Proprietor of the Steam Mill equal to carrying on business to any extent.—For particulars and terms, apply to Mr. WILLIAM BROWN, Surveyor and Estate Agent, 154, Friar-street, Reading.—N.B. Immediate possession may be had.

FREEHOLD GROUND for Building on.—TO BE LET, upon BUILDING LEASES, PLOTS of GROUND, in the Worthy Road, Holloway, two or three minutes' walk from the Archway Tavern. Omnibuses every four or five minutes to all parts of London. Situate in St John's-road, which is being [illegible]. For further particulars, apply to Mr. H. WITHERS, 9, Poultry. The leases direct from the freeholder. Money advanced.

GUILDHALL, 4th February, 1856.—The Committee for Letting the City's Lands will meet at GUILDHALL, on WEDNESDAY, the 27th instant, at NINE o'clock precisely, to receive PROPOSALS for BUILDING LEASES of several PLOTS of GROUND on the north side of Worship-street, Finsbury-square. Also to receive proposals for Leases of a House, No. 18, on the north side of Banner street; a House, No. 4, Leonard-square; and a House, No. 53, on the east side of Tabernacle-walk, Finsbury. Plans of the property may be seen, and further particulars and forms of Tender obtained, at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

TO MANUFACTURERS, MERCHANTS, and OTHERS.—TO BE LET, a HOUSE, well and substantially built, and in excellent condition, with extensive PREMISES, situate in the western part of the City, and admirably adapted to any business requiring light, power, and other advantages.—For particulars, apply to Mr. C. PALMER, General Railway Office, 44, Gresham-street, City.

BROAD STREET, RATCLIFF.—THREE HOUSES, Nos. 53, 96, and 97, and FOUR SMALLER, Nos. 5, 6, 7, and 8, BURLINGTON-PLACE, TO BE LET, by TENDER, on a repairing lease, for twenty-one years, from Lady-day next. Sealed tenders to be given in before MONDAY, the 3rd of MARCH, 1856, at the Clerk's Office, Coopers'-hall, Basinghall-street, where further particulars may be obtained. The Court will meet at the Hall on TUESDAY, 4th MARCH, at ELEVEN, when the Tenders will be opened, and the Lessees appointed.—The Court will not be bound to accept the [illegible] Tender.

JAS BOYER, Clerk.

Coopers' Hall, February 5, 1856.

SUPERIOR PLOT of GROUND TO LET, [illegible] Situation very good for shop and [illegible] Apply at No. 4, Field-terrace, Kent-road, Surrey, near the Railway station.—Rent low.

TO MANUFACTURERS and OTHERS requiring WATERSIDE PREMISES.—TO BE LET, LOCKE'S WHARF, Limehouse, on the north side of the River Lea, near the Railway Station, and seven miles by road from London. The premises consist of a [illegible] warehouse, with counting-house and [illegible] Apply to Mr. RICHARDS, Auctioneer, Tottenham.

HAMPTON-COURT.—About Eight Acres of BUILDING GROUND TO BE LET, on 99 years' lease, or SOLD in small or large plots, near the above Palace and Railway, at moderate rents or prices. An advance of say 80 per cent. on the outlay would be made to respectable parties taking a considerable frontage. A small portion of the ground would be let for shops and cottages if desired; the residue for detached or semi-detached villas and small houses. Also, to be let or sold (belonging to the same proprietor), a convenient Family Residence, with six bed-rooms, at a moderate rent.—For terms, &c. apply to Mr. F. LETT, Architect, 36, Essex-street, Strand.

SURBITON-HILL and KINGSTON.—Several detached and semi-detached VILLAS, part unfinished and part in carcase, TO BE SOLD on very advantageous terms. The freeholds will be sold, or the purchases may be made subject to a ground-rent. Annual rental of houses, from 20l. to 70l. Also, a PAIR of semi-detached RESIDENCES, one let at 85l. per annum; the other at present untenanted; lowest price, freehold, 380l.—For further particulars apply to Mr. LANG, Berrylands, Surbiton-hill, Kingston-on-Thames.

FREEHOLD BUILDING LAND TO BE LET or SOLD (ninety-nine years), in the High-street, Peckham (Belmont grove). GROUND for FOURTEEN HOUSES, 16 feet frontages, brick walls all round, fronting road made; would let immediately. Direct from the freeholder. A quantity of materials, with two sheds included.—Apply to W. W. RAWLINS, Queen's-road, Peckham.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare, and in the neighbourhood of Smithfield, well suited for shops and dwelling house, and workshops. The materials of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and LOWTHER, Solicitors, 14, Finch-lane, Cornhill-street; Mr. EDWARD LOWTHER, 58, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

TO TIMBER MERCHANTS and OTHERS.—The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 40 feet Cranes, Steam Engine for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

TO ENGINEERS.—TO BE DISPOSED OF, by direction of the executors, a very compact BUSINESS in London, which has been established many years. The premises are centrally situate, and conveniently arranged for the business. The principal tools are nearly new, by Smith, Beacock, and Tannett, of Leeds, and include a 12-inch self-acting slide lathe, planing machine, and drilling machine; there are also three other lathes, high-pressure steam-engine and boiler, smiths' forges and tools, fitters' benches, vices, and tools. About 1,000l. will be required, and to any person of high character desirous of starting business, a very eligible opportunity is presented.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

AN old-established IRONMONGER'S BUSINESS TO BE DISPOSED OF, well situated, moderate stock at invoice prices. Premium 250l.—Apply to Mr. TINDALE, Portland-place, Commercial-road, Stepney.

A BUILDER'S BUSINESS TO BE DISPOSED OF, near the East-end of London. For Stock, Utensils, &c. Price, 250l. None but principals treated with. Part of purchase can remain unpaid if preferred. For further particulars, apply (prepaid), to G. A. B. Office of "The Builder."

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphuretted or other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use with not any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compound that might be offered as "Pure White Zinc." If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily used, or by reason of the imperfect and careless production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the employment of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull by Messrs. BELL, LEMMING, and CO.; Messrs. GREENHALGH and Son, Manchester; T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO., Wellington-road, King's Cross; and at Stolberg, near Aix-la-Chapelle, and Painting Agent, Mr FREDK BRABY, Fitzroy Works, Newroad. In Manchester and Liverpool by R. CLAY, Merseyside, who is the acknowledged Agent for the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Timber-bush Building, Leith Walk. In Dublin, by Messrs. BOXILES.—ZINC PAINTS, in Kegs of 14, 21 and 28lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Belfast, and Cork; and in the Isles of Jersey, Guernsey, Man, and Wight; also in Paris, Lille, and Bordeaux.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agents in London, 12, Manchester buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MANUFACTURE WORKMANSHIP and TASTE has been awarded to M. D. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of artificial stone, that has been so extensively adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings, and is the only true material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that defy competition. A large Stock of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-relievi, Vases, Statues, Chimney-shafts, and all other Architectural Terra-cotta Work, executed, and moulds in the most approved manner, on the shortest notice. Blashfield's Patent Hollow Bricks can be seen at BLASHFIELD'S Warehouse and Show rooms, No. 1, Broad-street, Pentonville.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brad) & WYMAN, Nos. 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields, in the County of Middlesex; and published by the said CHARLES WYMAN, at the Office of "The Builder," No. 2, York-street, Covent-garden, in the Parish of St. Paul, Covent-garden, aforesaid.—Saturday, February 9, 1856.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head Master, R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart, or to others to impart, Art-education, to develope its relation to the requirements of trade and manufacture and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Freehand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Class-days for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c. the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also Classes for instruction in the technical processes of Chinn and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. Mylan. Fees per session.—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

COMPETITIONS.

TO ARCHITECTS SURVEYORS, AND OTHERS.

PLANS, DESIGNS, and DRAWINGS are requested for the ERECTION of TWO CEMETERY CHAPELS, under one roof, together with a Lodge and Entrance-Gates, for the Grantham Burial-Ground (containing six acres of land), to include ground-plans and elevations, and to be accompanied by approximate estimates of the expense. The buildings to be faced with Ancaster stone, and the plinths to be of Mansfield stone. The whole expense (including fittings, &c. of chapels) not to exceed the sum of 1,500l. 10l. is offered for the plan of the chapels and buildings considered to be the best (unless the architect shall also contract for the works), and 5l. for the second best The whole of the plans, &c. to be sent to me, sealed and endorsed, but without any name or distinguishing mark, on or before SATURDAY, the 1st day of MARCH next, inclosing a sealed letter in each case from the person forwarding it.

By order of the Burial Board.

ROBERT HENRY JOHNSTON, Clerk.

Grantham, Feb. 5, 1856.

EAST DEREHAM CORN-EXCHANGE COMPANY (provisionally registered).—Architects desirous of furnishing PLANS for the proposed CORN-EXCHANGE, may see a plan of the site, and obtain necessary particulars, on application at the Office of HENRY N. COOPER, Esq. East Dereham, Norfolk, the Secretary of the Company, on and after the 12th inst. The architect whose plans are accepted will be paid 10l. for such plans. Plans will not be received after WEDNESDAY, the 12th day of MARCH next. All plans to be sent sealed, and to be on the scale of one-eighth of an inch to the foot.

East Dereham, 2nd February, 1856.

N.B.—A specification stating the general mode of construction, the materials to be used, and the manner of finishing, is to be sent with the plans, to assist the Committee in their decision. The architect whose plans are accepted will afterwards be required to put the specification into a form suitable for builders to tender from.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, FEBRUARY 22nd, the President, Mr. ALFRED BAILEY, will read a Paper on "Cemetery Architecture."

The Class of Design will meet February 23th; subject for sketch: "A Domestic Gothic Window without Mullions," height, 5 feet; width, 2 feet 6 inches.

T. W. GOODMAN, } Honorary
J. A. BUNKER, } Secretaries.

Lyon's Inn Hall.

ARCHITECTURAL EXHIBITION.—Will CLOSE on SATURDAY, 23rd. Now open at the Galleries, Suffolk-street, Pall Mall, East. Lecture for TUESDAY Evening, February 19th, at EIGHT o'clock, "Observations on the Exhibited Contributions in the department for Materials and Manufactures," by JAMES EDMESTON, Jun. Esq. Hon. Secretary. Admittance, One Shilling. Season Tickets, half-a-crown

ART UNION OF LONDON (by Royal Charter). Prizeholders select for themselves from the Public Exhibitions. Every subscriber of One Guinea, will have besides the chance of a Prize, an impression of a plate of Harvest in the Highlands, engraved by J. T. Wilmore, A.R.A. from the important and well-known Picture by Sir E. Landseer, R.A. and Sir Augustus Callcott, R.A. The Prints are now ready for delivery.

GEORGE GODWIN, } Honorary
LEWIS POCOCK, } Secretaries.

444, West Strand.

CONTRACTS.

TO BUILDERS.

THE BURIAL BOARD for the PARISH of WALTHAM HOLY CROSS, in the County of Essex, are prepared to receive TENDERS for the ERECTION of TWO MORTUARY CHAPELS, at the New Cemetery, Waltham Abbey. The drawings, specification, &c. may be seen at the Office of the Architect, Mr. S. HEWITT, Montague Close, Southwark; and at Mr. J. JESSOPP'S Offices, Waltham Abbey. Tenders to be sent on or before MONDAY, the 25th FEBRUARY 25, next, at SEVEN o'clock, to Mr. J. JESSOPP.—The Board do not bind themselves to accept the lowest nor any Tender. February 8, 1856.

CAMBERWELL CEMETERY.—To NURSERYMEN, &c.—Tenders are required for the supply and planting of SHRUBS in the ornamental plots at the New Cemetery, Camberwell. The Tenders are to be in the form of a schedule of the various descriptions of trees, shrubs, &c. proposed to be used, to which the prices must be affixed; such prices including carriage to the cemetery and planting. Further particulars, with plans, &c. may be seen at the Office of the Architect, Mr. W. B. MOFFATT, No. 2, Adelaide-place, London bridge; and Tenders addressed to the Burial Board for the Parish of Camberwell, Vestry-hall, Camberwell; and sent in on or before MONDAY, the 25th instant.

GEO. W. MARSDEN, Clerk to the Burial Board.

TO BUILDERS.

THE GUARDIANS of the POOR of the RISBRIDGE UNION are desirous of receiving TENDERS for the ERECTION of a new UNION WORKHOUSE, for the accommodation of 296 inmates, with Board and Committee Rooms, Master and Matron's Offices, Infirmary, and other buildings, at Kedington, near Haverhill, Suffolk. Plans, specifications, and conditions may be seen at the Office of the Clerk to the Guardians, at Haverhill; and at the office of Mr. JOHN FRANCIS CLARK, Architect, Newmarket, where full particulars can be obtained. Tenders to be delivered at the Office of the Clerk to the Guardians, before NINE o'clock on FRIDAY morning, the 29th day of FEBRUARY next, after which time no Tenders will be received. The contractor will be required to give security to one-fourth the amount of his contract, for the due performance of the work; to be completed by the 1st day of JANUARY, 1857. The Guardians do not bind themselves to accept the lowest or any Tender.—Dated 30th January, 1856.—By order of the Board of Guardians.

JOHN H. JARDINE.

Haverhill, near Newmarket, Suffolk.

REGENT-STREET TABERNACLE, UPTON.—Plans and specification of the above building, for the Methodist New Connexion, are lying for inspection at the Offices of Mr. WILLIAM WIGGINTON, Architect, Wolverhampton-street, Dudley, under cover, to whom Tenders are to be forwarded by FRIDAY, the 29th instant. The Trustees do not pledge themselves to accept the lowest or any Tender.

Dudley, February 3, 1856.

TO CONTRACTORS and OTHERS.—The Committee for BUILDING a CHURCH at BYKER, Newcastle-on-Tyne, are desirous of receiving offers for the PURCHASE of the STONE on the Site. The superficial extent is one acre, and the depth of good stone considerable, with very little baring. The purchasers will have to work out the stone within a limited period, and to comply with such other conditions as the committee may require. Besides the ordinary modes of conveying away the stone the purchasers may have the facility of making an arrangement with the proprietors of an adjoining private railway, terminating at a convenient wharf, which passes on every convenience for shipping stone on the River Tyne. Mr. CLIFFORD or Mr. YOUNG, Schoolmaster, Byker, will show the site, and offers may be addressed to the Rev. T. R. GREEN, St. Mary's-place, Newcastle-on-Tyne.—Byker, Feb 5, 1856.

TO DEODORIZING COMPANIES.

TENDERS for DEODORIZING and REMOVING the SOIL from the CAMP, COLCHESTER for 3000 men, will be received at the Royal Engineer Office, at the Camp, where any information may be obtained, on personal application, and also Plans of Pentagon, which must be filled in and returned to that Office by the 23rd inst.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives notice, that General of Contracts, Pall-mall, London, on or before WEDNESDAY, the 20th day of FEBRUARY, 1856, from persons desirous of contracting for extensive ADDITIONS and ALTERATIONS to the WESTERN HEIGHTS BARRACKS, at Dover. Drawings and specifications of the works to be executed, may be seen by persons fully competent to undertake the work in the Ordnance Supply, and forms of Tender obtained at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock, from FRIDAY, the 1st of FEBRUARY, to TUESDAY, the 19th of FEBRUARY, 1856, Sundays excepted. A person belonging to the Royal Engineer Department will attend each day at the Western Heights Barracks, from TEN to TWELVE o'clock, to point out the work and explain the drawings. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 2,000l. for the due performance of the contract. Tenders for the above work to be addressed to the Director General of Contracts, Pall mall, London, and endorsed "Tender for work at Dover."—N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, January 16th, 1856.

ORDNANCE CONTRACT for AGRICULTURAL DRAINAGE Sealed Tenders addressed to the Director General of Contracts, War Department, Pall-Mall, London, will be received until TWELVE o'clock on FRIDAY, 29th FEBRUARY instant, from parties willing to Contract for the AGRICULTURAL DRAINAGE of the SPACES and PARADES between the battalions and ground adjoining, at the CAMP at ALDERSHOT. Specification, Plans, and Forms of Tender, together with any further information required, may be obtained on application to Mr. DREW, Clerk of Works, Royal Engineer's Office, Aldershot Camp, on and after MONDAY next, the 18th instant. The Tender to state the price at per acre, and to be endorsed, "Tender for Agricultural Drainage at the Camp at Aldershot." The War Department reserve the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, Aldershot, Feb. 13, 1856.

KESWICK WATERWORKS.—To IRONFOUNDERS, BRASS-FOUNDERS, and OTHERS.

THE DIRECTORS of the Keswick Waterworks Company hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:—

CONTRACT No. 1.—For the supply of about 138 tons of CAST-IRON WATER-PIPES and OTHER CASTINGS.

CONTRACT No. 2.—For the supply of SLUICE-VALVES, HYDRANTS, and STREET FITTINGS.

The drawings and specification may be seen, and further information obtained on application at the Office of JOSEPH HALL, Keswick, or at the Office of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster. Forms of Tender, schedule, and bills of quantities, will be supplied at 2s. 6d. the set. Sealed Tenders to be delivered at the Office of the undersigned, before TWELVE o'clock on MONDAY the 25th FEBRUARY instant, addressed to the Directors of the Waterworks Company, endorsed "Tender for Contract No. 1 or 2," as the case may be.

Signed, JOSEPH HALL, Solicitor to the Company.

Keswick, 11th February, 1856

TO BUILDERS AND OTHERS.

THE JOINT BURIAL BOARD for the TOWNSHIP and PARISH of FOLKESTONE, in the county of Kent, are desirous of CONTRACTING for BUILDING and FINISHING, at the new Cemetery, near Cherlton-road, TWO CHAPELS, a Porter's Lodge and Appurtenances, and the Boundary Wall, and for providing and fixing the Entrance-gates, &c. Parties willing to Contract, may see the plans and specifications at the Office of JOSEPH MESSENGER, Esq. Clerk to the Board, Bouverie square, Folkestone, between the hours of TEN and FOUR on any day (Sunday excepted). Sealed Tenders (marked "Tender for Buildings at Folkestone Cemetery") for executing the whole or any of the works, are to be left at my Offices in Church-street, Folkestone, not later than FOUR o'clock in the Afternoon of TUESDAY, the 11th day of MARCH next. It is stipulated that it shall not be incumbent on the Board to accept the lowest or any Tender.—By order of the Board.

Folkestone, 12th February, 1856. RICHARD HART, Clerk.

TO BUILDERS AND CONTRACTORS.

NEW CHURCH at WREXHAM.—Persons willing to CONTRACT for the works to be done in BUILDING a new CHURCH (to contain 1,000 persons) at Wrexham, may now see the plans and specifications at the house of Mr. LOVATT, Parish Clerk, in Wrexham. The intended site is within a quarter of a mile of Wrexham Station, on the Great Western Railway. Sealed Tenders must be delivered to the Rev. GEORGE ROBERTS LEE, the Vicar of Wrexham, on or before the 15th of MARCH next. The lowest Tender will not necessarily be accepted; and the contractor will be required to enter in a bond with sureties for the due completion of the work.—Any further information may be obtained, and a copy of the plans may be seen, on application to the Architect. H. KYRKE PENSON, Architect.

21, Wind-street, Swansea, February 11th, 1856.

BURIAL GROUND, NORTHWOOD, Isle of Wight.—To BUILDERS.—Persons desirous of CONTRACTING for the ERECTION of CHAPELS, LODGE, ENTRANCE-GATES, &c. near Cowes, for the Northwood Burial Board, can inspect the plans and specifications at the Offices of the Architects, Messrs. MEW and MANNING, 21, Great James-street, Bedford-row, on and after the 14th instant.—Tenders to be delivered on or before MONDAY, the 25th instant. The Board do not bind themselves to accept the lowest or any other Tender.

HENRY JAMES DAMANT, Clerk to the Board.

West Cowes.

CONTRACTS.

WESTBURY CEMETERY.—To BUILDERS and OTHERS.—The Burial Board of the Parish of Westbury are desirous of receiving TENDERS for the BUILDING on their new burial ground TWO CHAPELS and a LODGE, and also for CONSTRUCTING the BOUNDARY WALLS, laying out and levelling the land, with entrance gates. According to the plans and drawings prepared for that purpose by Mr E G BRITTON, of Oxford, the Architect. The plans, drawings, and specifications may be seen at my Office, in Westbury, and also at the Office of Mr BRITTON, 11, Beaumont-street Oxford, between the hours of 10 a.m. and 5 p.m. until the 3rd day of MARCH next and the Board will not object to receive Tenders from the separate trades or for the whole or any part of the works; but they do not bind themselves to accept either of them, or the lowest Tender. Tenders are to be delivered to me on or before the 10th day of MARCH next, marked "Tender for the Cemetery." Security for the due performance of the work to be prepared at the expense of the contractor will be required.

HENRY PINNIGER, Clerk to the Board.

Westbury, 11th February, 1856.

THE MARCH LOCAL BOARD of Health are prepared to receive TENDERS from competent persons willing to EXECUTE any of the WORK comprised in the following CONTRACTS for the Drainage and Water Supply of the District:—

CONTRACT A.—Sewers and Drainage Works.
CONTRACT B.—Well-sinking, Brick Tower, and Engine-House.
CONTRACT C.—A Steam-Engine, Wrought-iron Tank, Cast-iron Pipes, Pipelaying, and Sundry Iron-work.

The plans and specifications may be inspected at the office of the said Local Board in MARCH. Printed copies may be seen and printed forms of Tender and further information may be obtained, on application at the Office of Mr R REYNOLDS ROWE, Civil Engineer and Architect, 13, Emanuel-street, Commercial Road East, London, N.E. Sealed Tenders, properly endorsed are to be delivered at the office of the said Local Board on or before SATURDAY, the 8th day of MARCH, 1856. The Local Board do not bind themselves to accept the lowest or any of the Tenders.—By order.

THOS T ELLIOTT, Clerk to the Local Board.

March, Isle of Ely, February 11, 1856.

TO BUILDERS.
